A lad of 18 endeavoured to present a petition to the Emperor near the Sakurada Gate as His Majesty was returning to his Palace from the Autumn Manœuvres. The young man is one of the numerous band of Japanese youths who manage to support themselves and pay their educational expenses by labour of various kinds, performed in the intervals of study. He was in receipt of a sum of 35 *sen* daily for services rendered as a writer in the Statistical Bureau of the Cabinet. Out of the 9 *yen* thus gained he paid 1½ *yen* for lodging, and, acting as his own cook, lived on the rest, defraying also his fees at the School of Foreign Languages where he studied in the Chinese Class. He appears to have been in every way a lad of excellent behaviour and there is no indication of any mental aberration. But political affairs had preyed on his mind. He considered that the country's honour was being sacrificed and that duty dictated a direct appeal to the Sovereign. These incidents are an index to Japanese character.

The diamond and ruby brooch lost by Mrs. Barclay on her way back from the Yokohama Races on the 11th instant was picked up by a poor workman who observed something glittering on the steps of the Shimbashi station, he too being on his way back from Yokohama. He does not appear to have suspected the value of the article but, thinking it would amuse his children, he carried it home. A few days later he saw the advertisement but still did not believe that the article he had found was the one advertised. He nevertheless sent it to the Legation by his wife, and on receiving it Mr. Barclay at once paid the woman a hundred *yen*. She is described as having hastened home a veritable Attican, "delicately marching on most pellucid air." Apparently the man would never have conceived the nature of his find had not a friend suggested to him the possibility of its being valuable. Such ignorant people are conceivable in a country where brooches, bracelets and rings used to be unknown.

The reforms contemplated in the organization of the Department of Justice involve the abolition of three courts of appeal, 20 local courts (*Chiko Saiban-sho*) and 106 district courts (*Ku-saiban-sho*). In the case of the local courts the explanation is that hitherto there has been one in every prefecture, but 19 prefectures are to be abolished as separate entities and the Nemuro Court also is to cease to exist. These changes will result in reducing the number of judicial officials by 161 and that of clerks by 279, while one chief jailor—Miyagi prefecture—will disappear as will also 32 jailors. In the head office of the Department there will be a reduction of only 7 or 8 officials. The economies thus effected will amount to 266,000 *yen* on account of courts of law, and 366,000 *yen* on account of jails. It is further contemplated to establish 30 new registration offices in order that people may not be inconvenienced in the matter of notarial duties hitherto performed by district courts.

The funeral of Count Kawamura's mother took place on the 19th instant, the cortège leaving the residence of the Count at a few minutes before one o'clock and proceeding to the Aoyama cemetery. The deceased lady, who had attained the ripe age of 84, was not widely known in Tokyo, but the

universal respect and affection in which Count and Countess Kawamura are held were testified by the crowd of mourners that attended the ceremony and by the numerous floral tokens sent from all circles, not excluding the Imperial family. The service was according to the Shinto ritual. Among the foreigners present were their Excellencies Baron and Baroness d'Anethan, but of the distinguished Japanese personages that attended our space does not suffice to furnish a list.

The colossal work on the Philippines, to which we alluded some time ago as in course of preparation, has now become an accomplished fact, and its sale is announced by the enterprising publishers, the Arthur H. Clark Company of Cleveland, Ohio. The book consists of 55 volumes, each containing 325 pages and each costing \$4 (gold). There are to be only a thousand sets. The editors, of whom there are two, promise to give a full account of the political, economic, commercial and religious conditions of the islands from the date of their earliest relations with European nations to the close of the 19th century, and they have consulted about 200 rare works and manuscripts covering the period from 1493 to 1896. It is a wonderful enterprise, and presumably all the libraries will buy copies, but private individuals are not likely to be much attracted.

Now that Japan is about to institute a State tobacco monopoly it is interesting to turn to France, where a monopoly was established in 1812, and see how matters fare there. The gross amount received by the State from the sale of tobacco in its various forms in France is 414,000,000 francs yearly, representing a net profit of 330,000,000 francs. The greater part of the tobacco used is grown at home, and, although the regulations under which it may be cultivated are very strict, permits to be allowed to grow tobacco are in great demand. In twenty-five departments in France there are 56,000 planters, and an area of 16,000 hectares, or 40,000 acres, is under cultivation. In 1902 the quantity of home-grown tobacco purchased by the administration was 25,000,000 kilograms, at a cost of 23,000,000 francs, or 89 cents per kilo. This would represent a gross income of 1,400 francs per hectare—say £22 8s. per acre—which is only equalled by vine growing; hence the demand for permission to grow tobacco. Sixty per cent. of the French tobacco crop is grown in five departments, viz.: Dordogne, with over 4,000,000 kilos; Garonne, Isere, Gironde and Lot each produce from 2,000,000 to 4,000,000 kilos. In Algeria the cultivation of tobacco is free, and considerable quantities are exported to France, which also buys from Maryland, Kentucky, Ohio and Virginia. Supplies of choice tobacco are obtained from Havana, Mexico, Sumatra, Java and Brazil. Foreign cigars to the extent of about 11,000,000, at an average value of 220 francs per 1,000, cigarettes and tobacco are also imported from America, Turkey and Great Britain. The total of French purchases of foreign tobacco is 19,000,000 kilos, of an aggregate value of 30,000,000 francs. The sales in 1901 were as follow: Cigars, 2,600,000 kilos; cigarettes, 1,846,000 kilos; cut tobacco, 27,873,000 kilos; hard tobacco, 1,084,000 kilos; snuff, 485,000.

Mr. Covert, the United States Consul, writes from Lyons that the French sales of silk to the United States remain at about the same average from year to year, not-

withstanding the continuous increase in domestic production. The figures of American progress in this industry, as given in the *Paris Figaro*, are:—In 1870 there were eighty-six silk mills in the United States, representing an investment of \$6,285,000. In 1900 the number of mills had increased to 483, and the capital invested was \$81,000,000. In 1902 there were 500 mills, with \$100,000,000 capital, and at the end of this year it is estimated that 45,000 steam looms will be in operation in the United States. The value of the products for the three dates mentioned were: In 1870, \$14,000,000; in 1900, \$107,000,000, and in 1902, \$125,000,000. A Paris writer, in commenting on what he calls these phenomenal figures, declares that while this immense increase in production was going on in the United States the importations of silk augmented from \$24,000,000 in 1870 to \$26,100,000 in 1900 and \$30,000,000 in 1901. In 1860 the States manufactured but 6 per cent. of the silk worn by the people. In 1880 they produced 38 per cent.; in 1890, 55 per cent., and in 1902, 85 per cent. In commenting on these figures another Paris writer says that of manufactured silk the United States consume about \$2 per year per capita of population. Whatever may be done in the business in the United States, France is likely to possess the monopoly of certain grades of goods indefinitely—for instance, the mousselines and the fine fancy silks, the new designs for which depend entirely upon the number and ability of the artists ready to engage in such occupation.

In consequence of the intervention of the British Representative it has been decided, according to Japanese journals, that the security lodged by foreign insurance offices with the Finance Department may take the form of Japanese bonds payable in sterling; that is to say, the bonds now quoted on the London market.

Mr. Iwaya Matsuhei has been acquitted of the charges of corruption preferred against him in connexion with his recent election to the House of Representatives. It is thought that the public procurator will appeal against the acquittal.

The youth who tried to petition the Emperor has been pronounced insane. This decision seems to have been assisted by certain curiously exalted political view inscribed by him on the walls of his lodging house. His father also became insane three years ago. It is said that there are unmistakable physical symptoms of mental derangement. He is to be handed over to his relatives.

The Emperor has nominated four new members of the House of Peers. They are:—

Vice-Admiral Kurooka Tatewaki; Lieut.-General Baron Nagayama Takeshiro; Dr. Goto Shimpei of the Formosan Government; and Mr. Yamamoto Tatsuo, former President of the Bank of Japan.

Under the title "A Russian dog" vernacular newspapers publish an account of the arrest of Okuda Kumataro. This man was formerly a school-inspector in Osaka prefecture, but being implicated in the textbook scandal, he lost his office, and was sentenced to a month's imprisonment, a fine of 5 *yen* and to make restitution of 200 *yen*. His appeal from that judgment failed, but he carried the case to the Court of Cassation where it now awaits decision. Meanwhile, being liberated on bail, he is said to have come to Tokyo and opened negotiations with Bishop Nicolai at the close of

October for the supply of information with regard to Japanese military doings, the Bishop promising to pay a sum of 1,500 *yen*. Letters written by Okada to the Bishop pressing for money came to the knowledge of the police, and Okada was apprehended. He is now awaiting trial on a charge of seeking to obtain money fraudulently. Such is the story told by the press. We reproduce it with this comment that whereas there is nothing to justify us in questioning Mr. Okada's guilt, we altogether decline to believe that Bishop Nicolai was a party to any such arrangement. Much more probable does it seem to us, and much more probable will it seem to the public, that the Bishop, being approached by Okada, furnished to the police information leading to the man's arrest.

Since the above was in type we learn that our conjecture is correct. It was by the Bishop that the police were put upon Okada's track.

The Prince Imperial has graciously caused the Minister of his Household to inform Messrs. Singleton, Benda & Co., Ltd., the agents, that His Highness is pleased to allow his name to appear as a patron of the Humber cycle. A beautiful machine having all the latest Humber patents has been delivered to the Prince.

We understand that cable advices received in Yokohama from New Zealand state that goods which arrive at any New Zealand port before the 31st March next will be exempt from the provisions of the new preferential tariff.

It is but fair to assume that we in Japan do not receive more accurate information about Manchuria than people in Europe receive about Japan. On that supposition, how much may we believe of the stories constantly reaching us about the arrival of additional Russian troops in Manchuria or the southward movement of the forces there? By the middle of October London imagined—or, at any rate, had been told by newspaper correspondents—that the Japanese generally were flocking out of Manchuria; that Japan had landed troops at Pyong-yang; that she had concentrated a hundred thousand men at Hakodate preparatory to an attack on Vladivostok and that she had laid torpedoes in all her western ports. Can we reasonably imagine that the correspondents in Europe who collect news about Russia for transmission to the Far East are more accurate and trustworthy than the Munchausens who are purveying out here for the European press?

Miss Hilaire Moss has just made a record trip from London to Hongkong, covering the distance in a few hours under 20 days, thus beating the previous record to the Far East—Shanghai to London in 21 days. Of course it was all owing to close connections being made at each big port. For instance she arrived at Dalny in the morning and caught the Russian steamer leaving for Shanghai at noon. Shanghai was reached at 10 o'clock one morning and at 3 p.m. that same day, Miss Moss was aboard the French mail steamer heading south for Hongkong. It is a record to be proud of.

Mr. Ernest Low, so well-known in the theatrical world in London, has a capital article in the *Playgoer* in which he discusses the level of the "Variety" stage, or more popularly speaking "the Halls." He makes out a good case and certainly brings many facts to support his contention that "in

general decency and its standard of morality, the music-hall is miles away ahead of the average theatre." He contends, in fact, that "you will get more sheer unadulterated dirtiness—pure nastiness without any artistic rationale—in one play than in a month of music-hall frequenting." There can not be the slightest doubt that the standard of the music-hall has been steadily rising, and will continue to rise while such consummate artists as Mr. Albert Chevalier, Miss Ada Reeve, Mr. Bransby Williams, Miss Vesta Victoria—to mention only a few—give the best that is in them to the variety stage. The old type of low comedian, with his allusions to Bacchanalian revels and sottish family quarrels, is dying out, simply because the music-hall audience has risen above that level and refuses to countenance it any longer. The formerly despised and much maligned music-hall is assuredly setting an example that the legitimate theatre could follow with advantage in the direction of a purer level of public manners and popular taste.

It has long been known that owing to inclement weather the barley-crop for this year proved very bad, large areas having been devastated by rust. Figures are now published by the Department of Agriculture and Commerce, namely:—

	BARLEY CROP.	Koku.
1894	19,822,000
1895	19,537,840
1896	17,340,466
1897	18,005,490
1898	20,462,053
1899	19,335,962
1900	20,398,385
1901	20,658,217
1902	18,425,626
1903	13,545,105

The average crop being 19,325,501 *koku*, it will be seen that this year's yield was 29.9 per cent. below the average and 26.4 per cent. below the yield for 1902.

It is reported that there is a marked movement on the part of Yokohama Chinese to become Japanese subjects. Twelve recently obtained papers of naturalization and forty-eight have now applied for the same privilege. We presume that the Chinese wish to avail themselves of the wider facilities they will enjoy as Japanese subjects.

DO NOT MENTION IT!

Inasmuch as we credited the *Japan Times* with sincerity, we are regretfully compelled to question its discernment. For when it professes its belief that the *Japan Mail* made "an unreserved admission of vacillation," it commits itself to the proposition that a man who says he would rather plead guilty of theft than be justly accused of murder, makes an unreserved admission of larceny. However, we are disposed to be gentle with our contemporary in view of its explanation that its attack upon us "incidentally slipped from its pen." Certainly there were some slips of the pen, and perhaps, suspecting them to be intended as evidences of the generally fortuitous nature of the accusation, we should have refrained from treating it seriously. At all events we now accept our contemporary's explanation, and shall be prepared in future to charitably regard as a *lapsus calami* any of its propositions that are plainly inconsistent with facts or flagrantly defective in logic.

THE OPENING QUESTION.

IN Wiju, it is said, the insistence of the Japanese Minister with regard to the opening of Yong Am-pho is not very seriously viewed, inasmuch as the place offers no trade facilities and even though it were opened the position already secured there by the Russians would expose other nations to irksome restraints. Meanwhile the news from Seoul goes to indicate that the question of opening has been indefinitely postponed, and that the Foreign Minister would have resigned in consequence had not the EMPEROR issued a special rescript detaining him in office.

Yong Am-pho as a trading mart or a commercial port has not at present any special value, but as a strategical position it is of much importance. Apart from that, however, the salient facts are that Japan, the United States and Great Britain all united in seeking to have it opened, that the Korean Government was on the point of acceding, and that Russia's opposition frustrated the project. The plain inferences are five. First, that the deference paid in this matter to Russia's objection amounts constructively to an acknowledgement of her right to hold Yong Am-pho, a right which had never yet been officially recognised. Secondly, that if she has such a right at Yong Am-pho, then she has it also at any and every part of the Yalu Valley, for she formed her Yong Am-pho settlement in accordance with privileges avowedly conferred by the timber-felling concession, which extends to the whole of that region. Thirdly, that, her rights at Yong Am-pho being recognised, she has now an unequivocal precedent for acquiring, without the previous consent of the Korean Government, any portion, or the whole, of the Korean territory constituting the Yalu woodlands. Fourthly, that the plea upon which she bases her opposition to the opening of Yong Am-pho applies to the whole of Manchuria, that plea being that pending the settlement of the Manchurian problem the unquiet state of the Three Provinces renders it unwise to admit foreigners freely to any of the adjacent territory, whence it results that the proposed opening of Mukden and Ta-tung-kou must be regarded as purely illusory. And fifthly that Great Britain, the United States and Japan have suffered a signal diplomatic defeat at Russia's hands, for even though some short-sighted publicists may urge that Yong Am-pho itself is of small moment, the fact that its opening was officially pressed by the three Powers shows conclusively that its importance in their eyes justified such a step. Probably not many people anticipated that Russian influence in Seoul was sufficiently powerful to thwart the combined influence of Japan, the United States and Great Britain, yet that is what this incident means if it has any meaning. Another reflection may be added; it is that Russia herself evidently attaches great

moment to the exclusion of Occidental or Japanese nationals from the territories over which she is steadily extending her influence in Eastern Asia. Did she estimate that point lightly, she would not have deliberately figured in this affair as an opponent of free international intercourse and an advocate of exclusion: would not have taken a position most unequivocally hostile to the policy of the open door so loudly advocated by England, Japan and America and so unreservedly endorsed by herself in the past. All this confirms the judgment of those who have uniformly insisted on the vital necessity of placing open marts in the path of the Great Northern Power's aggressions. It shows, too, most unfortunately, that on the first occasion of a collision between the open-door and the exclusive policies, the former has been ignominiously defeated under circumstances particularly favourable to its victory. Mukden and Ta-tungkou may now be said to have sunk totally below the horizon of hope.

A WELCOME CHARGE.

IN the leading columns of the *Japan Times* of the 19th instant, reference is made to a comment of the *Novoe Vremya*, which journal claims that there has been a lack of consistency in the utterances of the Japanese press with regard to the Manchurian question. Our Tokyo contemporary, in the course of its rejoinder to the St. Petersburg newspaper, makes use of these words:—

It is true that one of these foreign journals has afforded much amusement to the newspaper reading public by the curiously vacillating attitude it has followed (*sic*) during the present crisis. Starting at first with finding excuses for Russian aggression in the Far East, the paper in question oscillated for some time between the apparently irreconcilable mission (*sic*) of defending Russia and that of condemning her, until it was finally carried away by the prevailing tide and joined the general antagonism to Russian aggression. It may be that the daily changing attitude of this foreign paper has misled our Russian contemporary.

We have reason to know that these words are addressed to the *Japan Mail* and we accept the indictment with pleasure, ignoring the grace of its anonymity. For there is no charge of vacillation to which we would not gladly plead guilty, no weight of ridicule under which we would not willingly labour, rather than be justly accused of having helped to promote war between two countries. Had the counsels of the *Japan Times* been followed by the Government of this Empire, the Far East would long ago have become the scene of a bloody conflict, and Japan, instead of winning the world's applause by her self-restraint and moderation, would have forfeited the sympathy of the nations by her precipitancy. It is a supreme gratification to us to reflect to-day that we have not promoted any such catastrophe, and to find that the finger of scorn is pointed at us by those whose elementary passions have prompted a different attitude. Nothing is easier than to shout; nothing simpler than to deliver brawling verdicts. Whatever may be written in the philosophy of original innocence, it is certain that

human nature's first instinct is to be violent and prejudiced, and that the role of the partizan finds everywhere apter actors than the role of the judge. But the humblest publicist has a responsibility that should raise him above the indiscriminating clamour of the mob and impel him to educate men's perception rather than to inflame their passion. It has been our endeavour throughout this Far-Eastern complication, as it was plainly our duty, to consider both sides of each question that presented itself. Speaking broadly, we see Russia animated by the same motives of imperial expansion that inspired our own country in the past and continue to inspire it to-day; we see Russia impelled into the same paths of self-aggrandisement that England trod formerly and is still treading. It would be the purest hypocrisy to ignore the likeness. What we can indeed gladly say and honestly think is that Russia's ways have ceased to be English ways. Russia creates the occasion to be aggressive; England awaits it. And that distinction involves the further discrimination that while to violate a written engagement has ceased to be tolerable in the eyes of the British public, Russia's respect for treaties and conventions seems to vanish in the presence of any temptation to disregard them. Yet Great Britain has not emerged so completely from the glass house that she can afford to throw stones indiscriminately. If Russia is laying hands on a big slice of Asia, England is assimilating nearly the whole of Africa; if Russia is building in the Yalu Valley foundations for a future edifice of aggrandisement, England is doing the same in Thibet. We have reason to be considerate, and we have reason also to remember that Russia's yearning for a free exit to southern oceans may well be called a law of her existence. No publicist should forget these things. So long, then, as Russia had not actually violated her promise of evacuating Manchuria, to assume that she intended to violate it, as some British journalists and some Japanese assumed, was to insult her wantonly. We ourselves never believed that circumstances would permit evacuation. Five years ago, when she obtained a lease of Port Arthur, we wrote that Manchuria must thenceforth be regarded as a Russian province, and our words were copied into the columns of several Far-Eastern journals. But when Russia again and again committed herself to public promises of evacuation, we were bound to hope—at least to hope—that if events (shaped, perhaps created, by the man at the front) should prove stronger than her conscience, she would at least endeavour to render the new situation tolerable to nations having vital or commercial interests at stake. She has not justified that hope. So far from seeking to mitigate her aggressions in Manchuria she has extended them with almost reckless defiance to Korea also, and it has now become difficult to discover any excuse for her procedure. Yet we have faith in a peaceful issue, for things have by

no means passed the limit where war becomes the lesser evil, and the Emperor of Russia as well as his most trusted advisers have not given any warrant for suspecting that they would prefer an appeal to the sword rather than accede to proposals which are essential to the preservation of Japan's honour. We therefore willingly abandon to the *Japan Times* a monopoly of that kind of consistency which discerns only one side of a question and which recognises only one tribunal, that of brute force.

THE INSURANCE QUESTION.

I.

AS the time is approaching when this question will have to be finally settled, it happens very opportunely that an authorized statement of Japanese official views has become accessible. Possibly, considering the tolerably complete treatment the subject has already received, our readers may not be interested in any fresh reference to it, but we nevertheless think it right to state briefly the reasons assigned for the action projected by the Japanese Government, premising that we obtain them from the statement alluded to above.

In the first place, then, it is necessary to understand clearly in what respects Japanese insurance companies and foreign insurance companies doing business in Japan differ so far as concerns official control and liability towards policy-holders. There appears to be a very marked distinction in both respects. For whereas a Japanese company (1) may be required at any time to present a report of its business or to submit to an official examination; (2) may be ordered to suspend its business, or to alter its business methods, or to obey such instructions as may seem necessary for the protection of its policy-holders; and (3), if a life company, must acknowledge that policy-holders have a preferential claim on its property in respect of funds accumulated for the benefit of the insured, foreign companies are not subject to these conditions. In fact, prior to the issue of Imperial Ordinance No. 380 in the year 1900, foreign companies were not under any restraint or control whatever. By that Ordinance it was enacted (1) that the competent Department might require foreign companies to deposit suitable sums, in the form either of cash or of negotiable securities officially approved; and (2) that the policy-holders should have a preferential claim upon such deposits. There were other provisions but they do not concern the subject under immediate discussion. Here, then, a discrimination was established between foreign companies and Japanese companies, inasmuch as the former were required to make a deposit whereas no such obligation was imposed on the latter. The reasons of the discrimination are very clearly stated. Indeed they may easily be gathered from the above synopsis of conditions. For none of the safeguards provided

by law in the case of Japanese companies are applicable to foreign companies. The latter are not under any obligation to submit to the close official scrutiny and control exercisable in the case of the former so as to secure the careful maintenance of capital and funds or to ascertain that, in the case of life companies, the legal reserves are duly set aside and maintained. In short, Japanese policy-holders in a foreign company do not possess any preferential right whatever with respect to the company's property, and the control exercised by Japanese authorities is limited solely to the company's branch office in Japan and can not be extended to the affairs of the head office abroad. It results therefore that should such a company close its branch office in Japan, or should it become insolvent, the Japanese policy-holders would have to file their claims against it in its own country; a necessity which would practically involve abandonment of claims in the case of holders of life-policies of small amount, and such holders are in the majority. The stability and trustworthiness of the foreign insurance companies now actually doing business in Japan are beyond question, but laws are not based on confidence, and it would be manifestly impossible to repose in foreign companies as a whole confidence which is not reposed in Japanese companies. Hence the enactment that a deposit must be made by the foreign companies, in which deposit Japanese policy-holders have a preferential right, while, at the same time, means of exercising adequate official control are provided. From the point of view of the foreign companies it is urged that they should welcome this deposit as an effective resource for increasing the confidence reposed in them by the Japanese public at large, that is to say, by their clients.

II.

IN a previous article we explained what are understood to be the reasons for requiring that foreign insurance companies doing business in Japan must make a deposit with the Treasury. As to the amount of the deposit, it was fixed at a hundred thousand *yen*, that being the minimum capital that a Japanese company is required to possess in order to qualify for carrying on insurance business. It has to be noted, however, that whereas Japanese companies need only hold that amount in reserve, foreign companies must deposit it in cash or negotiable securities. Some of the considerations that are held to justify that discrimination have been already noted—considerations connected with differences of control as well as of legal accessibility. But there is another point to be taken into account, namely, that in actual practice companies having a capital of only the minimum amount—100,000 *yen*—do not receive official sanction in Japan to undertake insurance business. It is the established rule to withhold such sanction to fire and marine companies unless they have a capital largely in

excess of the legal minimum. Hence if foreign companies were required to hold the same security as Japanese, a deposit of 100,000 *yen* would not suffice in the case of the former, but that figure was fixed in order to afford the utmost facilities to foreign enterprise in this country. Coming to life-insurance concerns, the special fact has to be observed that part of their premia have the nature of savings, and that in respect of such part, in other words, in respect of the legal reserve, policy-holders must have a preferential right. For that reason it has been enacted that when the legal reserve of a foreign life-insurance company doing business in Japan exceeds 100,000 *yen*, the excess must be deposited with the Treasury. A Japanese company is not required to make such a deposit. But it is required to maintain its legal reserve at a due figure, and effective methods for securing observance of that provision are possessed by the authorities, whereas they do not possess, and can not possess, such methods in the case of foreign companies which have their head offices abroad and keep all their funds in distant countries. Therefore there appears to be no resource but to enact that the legal reserves of foreign companies in respect of life policies issued in Japan shall be deposited with the Treasury.

Concerning the objection urged by some critics that such deposits would ultimately grow to immense sums, the answer made is that the money in question is collected originally in Japan from Japanese subjects; that its investment in Japan should not therefore be regarded as a hardship, and that since the expansion of the deposits would be directly proportionate to the volume of business done by the companies, the latter should welcome such expansion, and should regard it as a fine advertisement of credit. Reference is made to the Meiji Life Insurance Company, the principal Japanese office of the kind, which has been doing business for over 20 years. The amounts of its policies aggregate only 24 million *yen*, against which the legal reserve is 2,600,000 *yen*. These figures go to indicate that foreign companies which established agencies only recently in Japan, would not have to deposit such great sums as certain critics have predicted. At all events, whatever deposits they might have to make, would be taken from monies paid into their hands by Japanese policy-holders. Finally, the system now projected by Japan is said to be not without precedent abroad, and it is claimed for it that no other efficient means offer for securing the interests of Japanese insurers.

One more point has to be observed, namely, that three years were suffered to elapse between the issue of the Ordinance authorizing the competent Department to call for deposits by foreign companies, and its enforcement. The explanation given is that since few such companies existed at the time when the law was enacted, no occasion appeared for its

immediate operation. But foreign companies doing business in Japan have increased greatly of late and the policies written by them have reached a considerable sum, so that a system of control has become inevitable.

In this official *exposé* of reasons no allusion is made to the cardinal difficulty of the system from the point of view of the foreign companies, namely, that the latter object to investing any part of their funds in Japanese securities, which, in the first place, they do not regard with confidence, and which, in the second, could not be within reach of convenient financial manipulation were they deposited in official hands. Evidently the Japanese Authorities can scarcely be expected to discuss that phase of the question.

ROBERT BROWNING AT THE LITERARY SOCIETY.

Notwithstanding the Ball at the German Club, the reception at the American Legation, and several other social functions all occurring on the same evening, there was a good attendance at the fortnightly meeting of the Yokohama Literary Society. The lecture on "Robert Browning" by Mr. T. Satchell proved a most delightful contribution, dealing solely with the literary output of the poet, and leaving untouched the man-of-the-world side of Browning's character, which has been somewhat unduly emphasized of late by writers busy with the poet's life and works. Mr. Satchell possesses a keen, critical insight into the motives as well as the craftsmanship of the men-of-letters whom he cares to write about, and these qualities, combined with an easy literary style, make his contributions to the programmes of the Yokohama Literary Society always particularly welcome.

Referring at the outset to the popular conception that Browning's poetry is too obscure for the general reader, Mr. Satchell said:—"Mr. Swinburne, who is in some respects a finer critic than poet, has contended that Browning's obscurity arises not from lack of clearness of thought, but from a superabundance, so to speak, of mental impressions, which follow so swiftly that the reader is left with the idea of obscurity. Perhaps the real source of the obscurity is to be found, however, in what may be called the suppressed development of the thought. There are gaps—hiatuses in mental process—which the reader must fill for himself. No poet requires more expressive recital and no poet has made more use of those few marks of expression which the printer's case allows them. Two words and a question mark will with Browning express a whole thought, and a dash may indicate a complete change of mental attitude." Later Mr. Satchell alluded to some of Browning's peculiarities of style and gave several examples, among them the famous instance of *ranunculus* which the poet made to rhyme with "Tommy-make-room-for-your-uncle us;" and to Browning's frequent choice of slang words in order to get his rhymes. Browning's defence of his style Mr. Satchell finds in "Pacchiarotto," where he flings out at his critics in this manner in describing the nature of his theme:

Man's thoughts and loves and hates!
Earth is my vineyard, these grew there.
From grape of the ground I made or marred
My vintage; easy the task or hard,
Who set it—His praise be my reward!
Earth's yield! Who yearn for the Dark Blue
Sea's

Let them "lay, pray, bray"—the addle-pates!
Mine be Man's thoughts, loves, hates!

Browning, said Mr. Satchell, was conscious of his limitations and realised all his shortcomings. Time and again in letters to his future wife he refers to her as the inspired poet, himself as the

poet by profession. As a poet Browning took the most optimistic views of life. He saw the roseate gleam on everything. As he says in one of his very latest poems, he was

One who never turned his back, but marched
breast forward;
Never doubted clouds would break.
Never dreamt, though right were worsted, wrong
would triumph;
Held we fall to rise, are baffled to fight better,
sleep to wake.

And again,

My life did, and does, smack Sweet.
Was your youth of pleasure wasteful?
Mine I saved and hold complete.
Do your joys with age diminish?
When mine fail me I'll complain.
Must in death your daylight finish?
My sun sets to rise again.

Mr. Satchell introduced into his lecture several extracts from "Pippa Passes," and "Two in the Campagna," "The Ring and the Book," "Rabbi Ben Ezra," and "One word More," to illustrate the high range of thinking to which Browning could attain without unduly torturing the English language. He brought his most illuminating lecture to a close by observing: Browning certainly occupies a unique position among English poets, but any endeavour to define exactly what that position is would involve an inquiry as to the part played by poetry in human existence. If we accept Matthew Arnold's dictum that poetry is "a criticism of life," then Browning must take a very high place, since none, among modern poets, at any rate, have subjected life to a more searching and subtle criticism. Landor's utterance on Browning, that

Since Chaucer was alive and hale,
No man hath walkt along our roads with step
So active, so inquiring eye, or tongue
So varied in discourse

seems a very just one. If his "antidotes of medicated music" were occasionally of too rough a nature to answer for "mankind's forlornest uses," it is only the more necessary to give praise for what yet remains—the manifold sympathies which enabled him to touch so many chords of passion and sorrow, the consistent fearless advocacy of what he believed to be right. If he failed to detect in man the "slighted yet enduring" creature of the novelist, this side of man's nature has been so often dealt with by his comrades that it may be well for once to meet the other side. Due honour must be paid to one who maintained his faith to the end, and in his last poem again proclaims it:

At the midnight in the silence of the sleep-time,
When you set your fancies free,
Will they pass to where—by death, fools think,
imprisoned—
Low he lies who once so loved you, whom you
loved so,—

Pity me?

Oh to love so, be so loved, yet so mistaken!
When had I on earth to do
With the slothful, with the mawkish, the unmanly?
Like the aimless, helpless, hopeless, did I drivell
—Being—who?

No, at noonday in the bustle of man's work-time
Greet the unseen with a cheer!
Bid him forward, breast and back as either should
be,
"Strive and thrive!" cry "Speed,—fight on fare
ever

There as here!"

At the close, a most hearty vote of thanks was accorded the lecturer, on the motion of the President, who had read the paper for Mr. Satchell. The following musical programme was then discussed:—

1. Pianoforte Solo—"Nocturne"Chopin.
Mrs. Baibgate.
2. Song....."The Sands of Dee"F. Clay.
Mr. A. H. Atkinson.
3. Recitation ... "The Lady's Leap"Campbell Rae-Brown.
Miss Dodds.
4. Violin Solo "Legende"Bohm.
Mr. C. H. Thorn.
5. Songs..... "Three Little Songs"M. V. White.
Mr. A. H. Atkinson.

CONCERTS IN TOKYO AND YOKOHAMA.

A highly successful concert in aid of the Hokkai Orphanage, organized by Miss Sada Hayashi, took place at the Y.M.C.A. Hall, Kanda, Tokyo, on Monday afternoon. Though fixed at rather an inconvenient time, there was a fair attendance of foreigners present, including several from Yokohama. The concert began with a trio for *samisen* (Miss Matsushima), *koto* (Miss Okada), and *shakuhachi* (Mr. Yareta). Miss Hayashi, whom so many remember in Yokohama, then sang very charmingly, Gray's "The Land of Home," and in response to an encore gave Hatton's "Blossoms." The next item was a violin solo by Mr. H. A. Poole, and he gave McKenzie's "Benedictus" with great feeling. After a Naga-uta—song, Messrs. Yoshizumi; *samisen*, Messrs. Kineya—Miss Scherschewsky kindly took Miss Ross's place and recited "The Bells" (Poe); and she was followed by Mr. W. Karl Vincent, who played Grieg's "Spring Song," and in response to a rapturous encore obliged with Mattei's "Valse de Concert." The first part concluded with a selection on the *Satsuma Biva*. Part II. opened with a pianoforte duet by Miss Moulton and Miss Griffin, the first Movement in Beethoven's "Pastoral Symphony." Following this came a trio for *samisen* (Miss Matsushima), *koto* (Miss Okada), and *shakuhachi* (Mr. Yareta). Miss Scherschewsky then gave "Horatius" (Macaulay) in a very spirited fashion and was warmly applauded. The next item was a Naga-uta, by Messrs. Yoshizumi and Kineya; and they gave place to Dr. Haworth and Mr. McNair, who sang "Parting," a duet by Neidlinger; the concert concluding with a selection on the *Satsuma Biva*.

Despite the rain that fell early in the evening, the Convent concert drew a fair audience to the Public Hall, Yokohama, on Wednesday. The programme proved very acceptable from the beginning and several recalls were given in the course of the evening. It should be mentioned that Mr. W. Karl Vincent played very sympathetically the organ obligato to Mrs. Mollison's song "O, dry those Tears," and Mr. H. Grindle accompanied Mr. Brady in his monologue. Programme:—

PART I.

1. Pianoforte Solo..... "Waltz in A flat"Chopin.
Miss MENDELSON.
2. Song..... "The Devout Lover"M. V. White.
Mr. ATKINSON.
3. Humorous Song.....Selected.....
Mr. H. HORNE.
4. Pianoforte Solo..... "Frühlingsrauschen"Sinding.
Mrs. BATHGATE.
5. Song..... "Si tu m'aimais"L. Denis.
Mrs. MOLLISON.
6. Violin Solo..... "Adagio" (from Op. 26 Concert)
.....Bruch.
Mr. H. A. POOLE.
7. Song "L'Amade du Roi d'Ys"Lalo.
Mr. G. LEFEUVE.
8. Musical Monologue, "A Fallen Star"Chevalier.
"A broken down, old time, tragedian's story."
Mr. G. G. BRADY.

PART II.

1. Pianoforte Solo..... "Capriccio"Mendelssohn.
Miss ORTH.
2. Humorous Song.....Selected.....
Mr. H. HORNE.
3. Song..... "O dry those Tears"Teles del Riego.
Mrs. MOLLISON.
4. Violin Solo..... "Loure"Bach.
Mr. H. A. POOLE.
5. Song..... "Aimous Nous"Saint Saens.
Mr. G. LEFEUVE.
6. Burlesque French Chanson.....
"Tink-a-Tin"Chevalier.
Mr. G. G. BRADY.

GUARDIANS.

Before the gates of Hell I stood:

A radiant angel kept the way,
Nor did that realm of fire and blood
Seem fitted to his white array.

I paused, 'twixt pain and wonder riven.
Until he whispered, "Friend, 'tis well:
For demons keep men's souls from Heaven
But angels keep their souls from Hell."

M. K.

THE COMING AGAIN OF ANTHONY TROLLOPE.

One of the most remarkable of recent literary revivals is the renewed attention which is being given to the novels of Anthony Trollope. On both sides of the Atlantic interesting articles have appeared in magazines, and other periodicals that treat more exclusively of books and publishing matters, while the surest of all signs is the advertisements of new editions of Trollope's works which are being offered to the reading public and evidently finding sale. Nearly a year ago there was a premonitory sign of this revival in a very brief note, which started somewhere in England, to the effect that the group of worshippers who had long been faithful in their devotions at an all-but-deserted literary shrine (that is Anthony Trollope's) were looking up in pleased surprise to find the neglected altar grown gay with votive lights and men hastening to perform their genuflections where formerly they had passed unheeding. Six months ago Mr. Edward Fuller, a critic who is probably better known in the United States than throughout the English-speaking world generally, writing on "Real Forces in Literature," in an article which appeared in *The Atlantic Monthly*, declared that Anthony Trollope's name was creating a stir of interest, and that his singularly vivid and vital characters were no longer an esoteric luxury. Then there came a highly commendatory article in *The Dial*, a semi-monthly critical book-review which is published in Chicago; and more recently the writer, whose entertaining "Personalities" appears monthly in *Blackwood's Magazine* over the signature "Sigma," has been discussing Anthony Trollope, whom he appears to place much above the rank usually accorded him. So that it may well be that Barsestshire will soon be once more as familiar to the novel-reading public as the year's successor to Ruritania or Drumtochty, and St. Anthony seems to be in a fair way to be given his place on the beadroll by the side of St. William (Thackeray), St. Charles (Dickens), and St. George (Eliot).

Anthony Trollope—who but a few years ago was thought of by the general reader, when he did think of him at all, as "the man who wrote long novels to order in a mechanical fashion," and who was usually spoken of by the critics as the author whose chief claim to be recognised lay in his marvellous ability to write two hundred and fifty words in a quarter of an hour—Anthony Trollope is fast coming to his own again, and deservedly, for he drew an extraordinary number of types with exceptional accuracy. His dukes, his dandies, his hunting-men, his squires, his civil-servants, his barristers, his solicitors, and, above all, his clergy, are absolutely true to life; though it must be admitted that, of all these characters, the civil-servant is the only one with whom Trollope could have been intimately acquainted. There are in Dickens' novels all these characters, and the exaggeration which he gives to his portraits of them served a purpose most admirably, but that very exaggeration tends to make the personality of the men themselves repulsive to us when we think of them as possible acquaintances, while Trollope's characters are just such men and women as one would like to have for one's own intimate friends (within reasonable limitations). Thackeray, too, depicts all these different kinds of men and women, but there is about

them a certain severity which we admire for the purpose for which they are drawn, but which hardly draws us to them. It is said that Trollope was once asked by the wife of a church dignitary, whence he derived his material for his wonderful novel, "Barchester Towers," in which, it will be remembered, he deals with certain of the clergy of the Church of England with gloveless hands, and to the amazement of his questioner, he declared that when he wrote the story he was not acquainted with a single cathedral dignitary. Another illustration of Trollope's remarkable faculty for conceiving characters without actually having had an individual in his mind, is to be found in Mr. Sowerby, the spend-thrift Member of Parliament in "Framley Parsonage." The characterisation is said to be by all who have had acquaintance with such persons, of whom there have been not a few, astonishingly accurate; yet it is asserted by those who were well acquainted with Trollope at the time, that he had probably never spoken to a county Member of Parliament.

Any trustworthy history of Victorian literature will tell us that during Trollope's life he was one of the most popular of English novelists of the period immediately succeeding that which was dominated by the two great masters, Thackeray and Dickens. Yet almost immediately after his death, in 1881, he was forgotten so completely that hardly one in a hundred of the most inveterate novel-readers of the present generation but would be puzzled by a reference to Mrs. Proudie or the Duke of Omnium. Popularity, it is true, is an inadequate test of an author's claim to permanency; and there are a few books that are selling by the hundreds of thousands to-day, which yet—to put it mildly—are not likely to find a place on the shelves with the classics! Had the art of advertising been developed during Trollope's lifetime to the colossal dimensions which it has attained in our own, it is reasonably certain that his contemporaries would have been edified by announcements of "the fifth edition of 100,000 copies of 'The Small House at Allington,'" and probably the effect would have been just as disastrous as it is in the case of some books of the past few years, of which we knew so much (by advertisements, if not by perusal) but which are already, thank God, forgotten. Trollope's sudden decline in popularity was undoubtedly due to causes which find a parallel in many another author's experience. He had not the wisdom, or the moral strength, to stop, and he himself committed the very same mistake against which he had before warned other novelists. Towards the end of his life, as he says himself, he wrote not because he had a story to tell, but because he had to tell a story. But since "Anne of Geierstein" and "Count Robert of Paris" have not induced us to discard "Ivanhoe" and "Waverley," and since "Lovel the Widower" has not dimmed the glory of "Vanity Fair," the man who wrote "The Small House at Allington," "Barchester Towers," and "Phineas Finn," may well be forgiven "The Duke's Children," "Mr. Scarborough's Family," and other late productions of a pen which did not cease from activity when the brain of its wielder had lost its freshness. The number of Trollope's novels is something enormous: there are forty titles given in lists that are admitted to be incomplete, and while a dozen or more of them are of such a calibre as to be stigmatized as "respectably dull," yet even when these are omitted there remains a score of novels to lose which

entirely would be a severe blow to English fiction. We say nothing of his miscellaneous works, on travel, etc. There is little in anything that Trollope wrote which holds us spell-bound, as do a few incidents in the masterpieces of some of his more powerful rivals, for example when the Bernstein speaks to Harry Warrington, beneath the Kneller portrait of Beatrix (Thackeray's "The Virginians"), or when the little governess avows her passion to her master and lover; but the author who described the death of Mr. Harding ("The Warden") and gave us the scene in the episcopal palace between the curate and the diocesan tyrant in petticoats, that which culminates with "Woman, mind thy distaff!" ("Barchester Towers"), deserved a better fate than the oblivion from which Trollope is only now being rescued.

The accuracy in describing characters, which has been mentioned already, is the most conspicuous trait in Trollope's novels. In that he did not divide honours even with his giant contemporaries, Thackeray and Dickens, who in plot and diction entirely out-ranked him, and his naturalness is quite unapproachable. He is never exaggerated and his characters never talk over the heads of his readers. Nathaniel Hawthorne said of Trollope's books: "They are as real as if some giant had hewn a great lump out of the earth and put it under a glass case, with all its inhabitants going about their business, and not suspecting that they were being watched." As to the plots, while lacking, perhaps, in the artistic arrangement which is displayed in some of the contemporary novels, they are all singularly real. The complications are precisely such as occur to us to-day,—or rather, such as would have occurred to us if we had happened to be members of the upper middle-class in the England of forty years ago. The efforts of a clergyman to secure promotion; the intrigues of the mother of a slender-pursed young man to gain for her son a wealthy bride, or to prevent him from falling in love with a dowless maiden; the troubles of a vicar who has imprudently got into debt,—these are the every-day matters which Trollope treats of, so that we feel, more than with any other author, that the distance between the world which lies between the covers of a book and the one which lies outside of them is very slight.

One of Trollope's strongest claims to be ranked among the great novelists of his day has perhaps never been sufficiently recognised. It is not the least of his merits that his women are as true to life as are his men. To enumerate his heroines is mere waste of time; they must be known in their own environment if we would properly appreciate the delicacy of touch which portrays them as simple, everyday women, young or old; and if it is the unpardonable sin in literature to say that, putting Becky Sharp aside as *hors concours*, Trollope's heroines are more true to life than Thackeray's, we are prepared to commit it. It is well that some, whose position gives them an acknowledged right to speak *ex cathedra* in literary matters, have restored Anthony Trollope to his rightful place. Forty novels, none of them absolutely and hopelessly bad, and many of them most admirable, are a treasure-trove indeed, and not only should the present day readers be grateful, but the novelists of tomorrow have to gain in their art by reading Anthony Trollope.

ASIATIC SOCIETY OF JAPAN.

A special general meeting of the Asiatic Society of Japan was held at Van Schaick Hall, Yokohama, on Wednesday afternoon. Rain unfortunately fell just about sun-down and this, combined with the imminent departure of the Christmas mail for Europe, the Convent concert and other social fixtures, undoubtedly kept a goodly number of folks away.

The Rev. E. S. Booth presided and in introducing the lecturer said that meetings of the Asiatic Society in Yokohama had been very rare of late years. He could remember, 15 or 20 years ago, when they frequently met in the Grand Hotel parlours, and Professor Mihne would come down from Tokyo and tell them of his latest discoveries in the then new science of seismology and how he would send them home shivering with fright at his very emphatic assurances that the very centre of seismological activity in Japan lay almost within their view in the middle of Tokyo Bay.—(Laughter). The Council of the Asiatic Society had long been considering the calling of a meeting in Yokohama so that residents could see that the Society was still in active existence and was still carrying on its excellent work of research and investigation, but the opportunity did not immediately present until to-day. That afternoon the Society had to place before them a subject possessing exceeding great novelty, so novel in that it was seldom nowadays that one could meet a man who had come straight from a land still shrouded in mystery. The speaker that afternoon had come to tell them about some of his adventures in Thibet, and more particularly in the closely guarded city of Lhasa. In the latest number of the *Century Magazine* appears an article by a Russian, a Mr. Ushe Narzunof, who describes a visit he had paid to Lhasa, and this gentleman and the lecturer that afternoon, were the only foreigners—outside the Chinese, of course—who had penetrated within its walls during the past 25 years. Mr. Kawaguchi spent 1½ years in Lhasa and at the request of the Council of the Asiatic Society he had prepared a lecture upon his adventures. Now, to save the interruptions inseparable if the lecture was first delivered in Japanese and then translated into English, the Rev. H. H. Guy had kindly visited Mr. Kawaguchi the previous day and obtained from him an outline of the lecture. This outline he would proceed to read to them, and afterwards, Mr. Kawaguchi would be pleased to answer any questions and to explain and describe the very interesting collection of Thibetan curios which were placed about the Hall.

Mr. KAWAGUCHI, speaking in Japanese, expressed his thanks for the honour done him by the Asiatic Society and also by the ladies and gentlemen who had assembled that afternoon to hear his adventures. He was particularly indebted to Mr. Guy for the work he had done in connection with the translating of the lecture.

The Rev. H. H. Guy then went to the reading desk. He said that Mr. Kawaguchi left Japan on June 26th, 1897, arriving at Darjeeling on August 3rd, of that year. On January 5, 1899, he left Darjeeling for Calcutta and proceeded thence to Buddhagaya, to visit the famous temples there. From thence he took a month's journey to Khamandoo and then passed on to Mount Dhwagiri. On the northern side of the mountain he found the hill-side village of Lohtzalah, where he stayed a year perfecting himself in the Thibetan language and customs. He left Lohtzalah on June 12, 1900, and though the road was obstructed by soldiers he reached the borders of Thibet on July 4, 1900. To avoid suspicion he made a detour and went to Lake Manasarowar, and then at Gyanima found a market town frequented by Indian and Thibetan merchants. From this rendezvous he made his way round Mount Kailas and eventually reached Lhasa on March 21, 1901. He at once went to a *sera*, or priest college, one of the great Llamaseries which abound in Lhasa, and obtained a temporary lodging. Though not a physician in reality, Mr. Kawaguchi found it expedient to adopt the rôle, and having succeeded in effecting some astonishing cures—astonishing from the Thibetan point of

view—he found his path fairly smooth for awhile. There is a peculiar kind of dropsy very prevalent in Lhasa, which, if taken in time, can be cured, and, Mr. Kawaguchi being fortunate in his treatment of some dropsical patients, his fame spread abroad and the Minister of Finance took him to live at his house. So great was the belief of the Thibetans in his healing powers that they were persuaded that he could heal all sorts of diseases, and Mr. Kawaguchi is convinced that many people were actually healed by faith alone. But his popularity almost led to his undoing, for the local practitioners grew jealous of his fame and his life was threatened. Through the influence of the Grand Llama the danger passed. This great dignitary having heard from the mouths of some poor priests whom Mr. Kawaguchi had cured free of charge, of the mighty powers of the *pseudo* doctor, the Grand Llama proposed that our traveller should become a Court physician. The head Court physician, the *Tsikan*, was accordingly instructed to present Mr. Kawaguchi to the Grand Llama. This audience took place in a detached palace on the north side of the Kichu river. The walls of this palace, like all other specimens of purely Thibetan architecture, were concave. Inside the gate the traveller found buildings having flat roofs like buildings in Calcutta, while others bore roofs of the high Chinese design: some of the gardens were laid out in accordance with the Chinese system of landscape gardening, while others were laid down with broad lawns and grass-plots in the European style—these showing undoubtedly traces of Anglo-Indian influence. Mr. Kawaguchi had received minute instructions as to his procedure on reaching the audience chamber, and so when he entered the apartment with the Head Physician, he bowed thrice, striking the floor each time with his head: then he crawled along the floor towards the Grand Llama and received his blessing, the Llama placing his hand on the suppliant's head. After a formal introduction the Grand Llama said: "I hear that you have been performing great cures: go on, I will see that you are looked after." A brief conversation followed and then Thibetan tea—tea mixed with salt and butter—was handed round, and a few questions regarding Chinese Buddhism closed the audience.

Mr. Kawaguchi, describing the appearance of the Grand Llama, said that in August, 1901, he appeared to be about 26 years old; a large man, with eyes more almond-shaped than the average Chinese. A Chinese phrenologist who saw him passed this remark, "He is a man who will cause a rebellion." The look of the Llama might be described as being sharp like a fox. He usually wears the clothing of a Thibetan priest, but when transacting affairs of state he assumes silk garments cut in the style of the clothes worn by the common people. He was educated at the Rebut College in Lhasa, where he graduated, and he claims to be the 13th incarnation of the Bodhisattvists. In character he is exacting, but has great sympathy with the lot of the common people. He readily hears their requests and helps them. He is just, impartial in judgment and possesses great political resources. He is undoubtedly more interested in politics than in religion, and is looked upon as a man of great power and influence among the people. But foreign politics as they influence Thibet are a source of great worry to the Grand Llama, who dreads foreign interference. To illustrate this, Mr. Kawaguchi tells a story related to him by the Thibetan Minister of Finance. In December, 1901, a Thibetan who had been sent to Russia to try and arrange a secret compact, returned and reported that "Russia would help Thibet at any time, in spite of any interference on the part of England." This gave the Grand Llama much peace of mind. Thibet has had relations with China since the 7th century, but it was not till 1700 that she became a dependant on China. Now Thibet is almost independent again and China's influence there has fallen to earth. This is largely the result of the China-Japan war, news of which quickly found its way to Thibet. It seems that when that war broke out China sent Imperial messengers to the Grand Llama asking that prayers might be offered for the success of the Chinese arms. To carry out these wishes, the

priesthood throughout Thibet were engaged, and to render their prayers more effective mimic battles were arranged in which the priests took part. With reference to these wholesale prayers for China, another good story is told. Thibet is supposed to pay tribute to China, but as a matter of fact she pays nothing. She squares the bill in this fashion. Every year on the 6th March, the Thibetan priesthood has to pray for the Chinese Emperor. This involves some expense, so the Chinese tribute money is ostensibly employed in paying the costs of the Emperor's annual prayer-meeting, and part of the expenses incurred in sending messengers to Peking to enquire as to the Emperor's health. Priests and laymen are equally involved in these transactions.

Russia first became interested in Thibet through a Buriat Mongolian who went to Thibet to study Buddhism. He was followed by others of his race, and when Russia took over the Buriats and incorporated them in her Siberian dominions she soon took advantage of the situation. The first Buriat student, Ngakuwangdodge, was a man of some importance and he studied for 20 years at the Rebut College and, graduating, became a Doctor. He eventually became teacher to the present Grand Llama when but a child, and on the foundations thus laid built up a position of power and influence. When this Buriat returned to his own country it did not take long for the news to reach St. Petersburg that he had been a teacher of the Grand Llama, and he was sent back to Thibet loaded with money and other acceptable things. These he presented to the priests, the teachers in the Colleges at Lhasa, and to others of influence. Then when Chinese influence began to wane upon the close of the China-Japan war, he strengthened his position still further and taking advantage of an opportunity said to the Prime Minister, "If Thibet does not look to Russia, England will do her damage." Then the question arose, what sort of a man is the Russian Emperor, and it was not long before the diviners found that he was "an incarnation of Maha Bodisatva—the Maha Bodisatva who is to unify the world." This declaration fitted in with the Thibetan belief that Utopia (Paradise) lies to the north of Thibet and that the founder of the new religion will come from there when he sets about founding the kingdom of the whole world. Thus with fine words and the expenditure of much money, a great faith on Russia was stimulated among the official classes. Toys, pistols, watches, all ostensibly made in Russia but really hailing from America, now began to filter in as presents for the folks of influence, while the Grand Llama himself received a Bishop's robe from the Czar. An embassy was now organized to thank the Czar for his presents, and the Lord Chamberlain (Danieru Cheumo) was sent to St. Petersburg. He was reported in December, 1901, to have made a secret compact with Russia. Two months later a caravan of about 200 camels came from the north, bringing rifles and small foreign things, a present from Russia to Thibet. Mr. Kawaguchi learned of the contents of the caravan from the Minister of Finance, with whom he was then living. Though these relations with Russia are most pleasing to the Grand Llama and the Prime Minister, the people in general are in great doubt as to the purpose of such intercourse and are asking many questions. The Grand Llama, however, allows nothing of this grumbling to come to the surface.

England's relations with Thibet have proceeded from Darjeeling, and many have been the efforts made by the Indian Government to establish a state of good feeling. At Darjeeling there are schools where Thibetans can obtain their education free; scholarships are given to those students who show special aptitudes, and these later obtain positions as teachers, secretaries and surveyors. Thibetan students greatly appreciate the advantages to be obtained in India, for in their own country they suffer many hardships, and when they return home they spread abroad a spirit of good-feeling for England, the English officers, and the Indian Government. Indeed many of them held the belief that the late Queen Victoria was an incarnation of Paluden-lhamo, a famous idol in Lhasa, who is either the

Goddess of War or Minerva. When they heard of her death they said she had returned to her own country. There can be little doubt that the general opinion among the people of Thibet is in favour of England. With regard to Nepal, which lies on the Thibetan boundary, relations are rather strained at present. Thibet fears Nepal, which is an independent monarchy having an army of 40 or 50 thousand men, and Thibet still pays the Nepaulese a tribute for the conquest made by the latter in Thibet. Mr. Kawaguchi was present in Nepal when the tribute bearers arrived and he was fortunate enough to obtain from the Head of the Mission himself all the particulars relating to the overtures made by Russia to the Grand Llama. Mr. Kawaguchi found the Nepaulese much like the Japanese, but the great weakness of the country arises from polygamy which leads to much internecine strife and many murders and assassinations. Summing up the political situation in Thibet at present, Mr. Kawaguchi is of the opinion that Russia is in the lead through the officials, but should she take steps to enter the country even with an armed force, then she will encounter the strong feelings which the people have for England. This naturally raises the question: has Thibet the desire to be independent?—and Mr. Kawaguchi's answer is that the Thibetans as a nation have no spirit of independence. Rather they are of a dependant spirit: they want always to lean on someone stronger than themselves, and this development of their character he attributes greatly to polyandry. Yet the population is increasing tremendously. Already Thibet has to import a great deal of barley from abroad; her cotton clothing is all purchased from India, and her trade relations with that country are expanding in all directions, so it seems that if England only pursues the right methods she must inevitably become the protector of Thibet.

At the close of the lecture the speaker invited questions. In answer to Mr. A. BELLAMY BROWN Mr. KAWAGUCHI said he entered Lhasa in the garb of a Thibetan, a red woollen robe, and when interrogated as to his profession he said he was a Chinese physician. Of course he spoke Thibetan all the time.

In answer to another question, Mr. KAWAGUCHI said that he was obliged to leave Lhasa in consequence of a merchant from Darjeeling giving it out that he was a Japanese priest. He had to leave at once.

The Rev. WALTER WESTON said that with reference to the remark that Mr. Kawaguchi was only one of two foreigners who had been in Lhasa, he supposed that this only referred to the last quarter of a century. A great many foreigners had really been there from the 14th century downward.

Mr. KAWAGUCHI.—Yes, that is so. The remark would only apply to the last 20 years, and of course Chinese are continually coming to and fro.

Mr. WESTON wanted to know whether Mr. Kawaguchi had any idea whether Major Younghusband's boundary commission, which they read of occasionally in the papers, had any prospects of success.

Mr. KAWAGUCHI said the Commission would undoubtedly have to suffer great hardships and privations owing to the great cold of winter. The question of provisions was a serious one, and besides they must expect the opposition and hostility of the Thibetan soldiery; still a good campaigner might hope to see his mission crowned with success.

Another questioner asked what was the reason for England sending such an expedition.

Mr. KAWAGUCHI explained that England had long been desirous of making a treaty of friendship with Thibet, but had never succeeded. Just opportunely a dispute arose between Nepal and Thibet with reference to the boundary line dividing the two states. Thibet said Nepal had taken too much, but instead of sending commissioners to fix the line at once, Thibet delayed and delayed. Then the Indian Government intervened and got together a scientific expedition which was now encamped on the borders of Thibet waiting the arrival of the Thibetan commissioners.

Another gentleman wanted to know whether Russia would send a similar commission and what would be the success it might expect; to which Mr. KAWAGUCHI replied:—*Keredomo; Watakushi wakarimasen*, and raised a general smile.

Finally, Mr. WESTON said that a great deal of interest was attached to the election of the Grand or Dalai Llama of Thibet, but very little was known regarding it. Could Mr. Kawaguchi give them any information on the point?

Mr. KAWAGUCHI said that the election of the Grand Llama was called an act of inspiration. The four chief temples of Lhasa were called upon to select a new Grand Llama, and as the gods had not time to call a council and decide among themselves who was to be the Grand Llama, each temple took a hand, and its chief wrote down the name of a child whom it thought fit and proper to fill the office. These four names were then placed in a golden box and sealed. The box remained unopened for seven days. Then with all pomp and ceremony it would be brought out before a solemn conclave of the higher priesthood, the seals broken and a slip withdrawn. The child whose name appeared on this slip became the new Grand Llama.

On the motion of the Rev. E. S. BOOTH a hearty vote of thanks to Mr. Kawaguchi and his able interpreter, Mr. Guy, was cordially given, and then the rest of the time was spent in examining the unique objects of interest which Mr. Kawaguchi has brought from Lhasa.

FIRES.

About a quarter past nine on Sunday evening fire broke out in the upper portion of the premises occupied by Kingsell and Co., Chinese printers, at No. 53, Main Street. The night was fortunately calm and the firemen were able to get the outbreak under control in a very short while. Nevertheless the flames made a very fine show for a time and the crowds that gathered in and around Main-street were enormous. Messrs. Illies and Co., on one side, and Messrs. Lohmann on the other, are to be congratulated on their escape.

There has been and no doubt still will be a good deal of comment about this fire. It is remarked that this is the fourth or fifth time the firm have had a fire and people recall what was said on previous occasions.

The manager of Kingsell & Co., who says his employer is not at present in Japan, informs us that at the time of the occurrence he was at the Chinese Club and that of his staff one was downstairs in the business part of No. 53. We gather from him that there were people in the upper storey but none in the room in which the flames started, the front corner apartment next to Messrs. Illies & Co. The property is insured for yen 13,000 with the Union Assurance Office, and the Manager adds that it is worth, including machinery, stock, etc., yen 20,000 more. The police say the cause was a candle which was left burning too near a cloth hanging.

Fire broke out on Nov. 20th at the Okura cavalry barracks, burning down one building.

On Nov. 21st about 7.30 p.m. fire broke out in an unfinished house at Minami-Ota, Yokohama, destroying it. The cause was a charcoal fire left by carpenters the day before.

There were three fires in Yokohama on Tuesday. The first broke out at about half-past two in the morning in a house situated at No. 988, Minami, Otamachi, owned by Mr. Yasumura Hichiro. The flames were put out at about four o'clock after completely destroying the house and partially damaging the adjoining house. The cause is not yet ascertained. The second fire broke out at about half-past one o'clock a.m., in the house of a Chinese tailor situated at No. 19, Yamashita-cho. It was quickly extinguished before the flames caught the building. Negligence is alleged as the cause. The third fire broke out in an empty house at Bandaicho Sanchoe, Yokohama, at about half-past seven in the evening. Four houses were destroyed.

FOOTBALL.

There was plenty of football on Saturday on the cricket ground. In the morning the Juniors had a set to and those who saw them at play came away with the impression that the lads are shaping very well at the game, and that one or two among them give decided promise of developing into keen players. In the afternoon an Association match was played by the Y.C. and A.C. between Whites and Colours. The game was not particularly brilliant and nothing was scored in the first half. On change of ends, Colours "bucked-up" considerably and before the whistle blew secured two goals.

The Rugby game between the Y.C. and A.C. and H.M.S. *Glory*, which was fixed for three o'clock, drew a large concourse of spectators to the ground. The afternoon was perfect being bright but windless and as the two teams were excellently well-matched the game proved very fast. Yokohama were the first to score. Strome, collaring the ball, skilfully worked his way through all obstacles, and passed it to Wheeler almost on the *Glory's* touch-line. Wheeler at once touched down and secured the try. Stuart took the kick but failed to convert. From this time on the play was mostly in the centre of the ground, neither team managing to break away, though there were some very pretty bits of passing on both sides.

On re-starting the naval men made a strong attack and very quickly a try was obtained which, however, was not converted. A stern struggle now ensued and in the sequel of some interesting play Yokohama worked their way into their opponents' twenty-five. But they were driven back and never again got so far down the ground. The *Glory* had better luck, securing another try, though again no goal was kicked, and the match ended—H.M.S. *Glory*, 6 points, Y.C. and A.C. 3 points.

On Thursday afternoon teams from H.M.S. *Albion* and *Vengeance* played a keen game of Association football on the cricket ground. One goal was scored by either side in the first half, but on changing ends the *Albion* romped ahead, completely out-playing their rivals. The score in the close was *Albion* 4 goals, *Vengeance* one.

Two games of American football were played on Thanksgiving Day at Maganecho. In the morning the *Rutigh* and *New Orleans* met and neither side managed to score a point. The *Oregon* and *Cincinnati* came together in the afternoon and after a splendid game the *Oregon* finished victors with 28 points to *nil*.

MR. WIRGMAN'S WATER COLOURS.

Mr. C. A. Wirgman opened his annual exhibition of water colours on Monday at the Masonic Rooms, No. 78. The light was unfortunately bad, but was still sufficient to show that the artist has been executing first-class work during the rest of the year. This time he appears to have given himself more largely than usual to flower pictures, and the result is a very fine show of colour. Among his chrysanthemum studies we should suppose No. 3 will win considerable attention. There is a fine collection of cherry blossoms, of which 9 and 10 are particularly attractive. Then there are spring flowers and autumn flowers, and an iris field at Omori. The Torii-toge from Narai, Shinshiu, will command interest by reason of its striking combination of mountain and stream. Those who like the hues of the maples will appreciate No. 32, indeed all the Kiga scenes are good. No. 42 shows a large fishing boat coming home through the off-shore seas somewhere in Kadzusa, and the "Misty Morning at Choshi" is a bold and successful attempt to depict figures fishing from rocks, half obscured by mist and spray. There are in short sketches on the Nakasendo, autumn scenes at Shiobara, Hakone and in other parts and there is the large group of flower pictures, a total of 48 pieces which it will certainly be a pleasure to inspect.

THE LAW COURTS.

SHIDZUOKA RICE EXCHANGE CASE.

In the Court of Administrative Litigation, a case instituted by the Shidzuoka Rice Exchange against Baron Kiyoura, Minister of State for Agriculture and Commerce, petitioning for the cancellation of a decree rejecting an application for renewal of the business fern, was resumed before Presiding Councillor Matsuo on Nov. 18th, when judgement was rendered ordering the Minister to give a permit in accordance with the application for continuance of business, and to bear costs.

TRIAL OF J. R. CUNNINGHAM.

The trial of J. R. Cunningham, a bluejacket of the U. S. cruiser *Albany*, for assaulting a harbour policeman on Oct. 25th, is to take place this morning (Nov. 21st) in the Yokohama District Court.

TRIAL OF J. R. CUNNINGHAM.

In the Yokohama District Court on Nov. 21st, the trial of J. R. Cunningham, a bluejacket of the U. S. cruiser *Albany*, who was charged with having assaulted G. Sano, a Harbour policeman, took place before Judge Matsuyama with associates and Public Procurator Nakamura.

After the usual preliminary questions the public procurator stated that the accused landed from the *Albany* on Oct. 25th and paid a visit to Maganecho and other parts of the Japanese town. At the playground he met S. F. Williams of the same ship and they hired jinrikisha. They then visited several restaurants and had drinks after which they were more or less intoxicated. When they came to the Hanazono bridge, Williams got angry at the slowness of Asawa in whose jinrikisha he was riding. He got down, struck the coolie and hired another vehicle. Williams did not pay the first coolie. The accused and Williams arrived at the English Hatoba about 10 o'clock p.m. Asawa had followed them to the hatoba where he complained at the police station and asked the police to persuade the bluejacket to give him his fare. Sano and one other constable went to the hatoba where the accused and Williams were about to leave by boat, and advised them to pay the coolie. Between the policemen and the two bluejackets, some conversation was exchanged, the latter becoming very angry at the advice of the former, and assaulting the officers with bamboo sticks which were produced in Court as evidence. A struggle followed in which some Japanese who appeared on the scene assisted the police in arresting the accused and Williams. In front of the Examination Department of the Customs, Cunningham struck Sano, one of the officers, with his fist on the forehead so hard that Sano fell back on the stone-paved ground sustaining severe injury to the back of his head and being rendered incapable of attending to his duties for many weeks. The accused and Williams then jumped into a boat lying at the pier in which was a *sendo* of the Harbour police station. One of the two foreigners struck the *sendo* with a stick inflicting injuries on the head and other parts, and threw him into the water.

The Court then examined the accused. The latter stated that he belonged to the U. S. cruiser *Albany*, which arrived at Yokohama on Oct. 22nd. On the 25th at 1.30 p.m. he landed at the French Hatoba with Pearson and four other shipmates. He did not know where the others went after landing, as he at once hired a jinrikisha coolie at the Hatoba and went alone to the foot-ball ground where he met Williams a bluejacket of the same ship. With Williams he went to the Imperial Hotel to take a drink and then to the Boston House to have food. They returned to the Imperial Hotel to get a bottle of beer each, after which they visited several Japanese restaurants, the names of which the accused did not remember. On returning, they went again to the Imperial Hotel and Wright's Hotel. The accused did not know whether he or Williams overturned one of the jinrikisha and took another. The accused, however, found at the hatoba by the mark on the clothing of the coolies that the rikisha was changed. He supposed that he had got by mistake into the changed rikisha when coming out

from one of the bars. Williams did not pay the coolie, who complained at the police office. Two policemen were talking about something at the hatoba, but he could not understand them. He thought they were advising Williams to pay the coolie. He did not know whether Williams had taken violent action against the policemen, because he was walking ahead and it was dark. The accused did not act rudely towards the police but about thirty Japanese coolies were crowding round him causing trouble with him and Williams. They assaulted the accused with bamboo sticks from which he sustained two injuries. He then only brandished a bamboo stick which he took from one of the crowd and defended himself when one of the policemen pinioned him from behind. The accused did not know the name of that officer. He struck the latter with his fist on the forehead and the officer fell on the spot. If he had not done so, he would have been killed by the crowd of coolies. The accused did not remember that the place where the police officer fell was paved with stone by the side of the railway for the pier. He heard afterwards that a policeman was severely injured by falling on stone so that he was incapable of duty for over ten weeks. The policeman embraced him with both hands while the Japanese coolies were beating him with bamboo sticks. Somehow his right hand got loose so enabling him to hit that officer and to defend himself from the Japanese coolies in front. The evidence by Ikaki to the effect that the accused was not defending himself but assaulting the police was not true. After having escaped from the police, he went into a sampan; he did not carry a bamboo stick. He did not know S. Fukano but he found a Japanese in the boat. The accused never threw the Japanese into the water, and whether Williams did it he was not aware. He did not see the face of the policeman who seized him. He did not know Ito, one of the policemen, who had slight injuries on his face. The accused did not know whether Fukano, the *sendo* of the boat, sustained injuries from which he was incapable of attending to his work for three weeks. He was arrested in the boat. He sustained several injuries from which he suffered for 15 or 16 days.

The Court thereupon summarized the evidence given by Drs. Tokuda and Iwata, Police Officers D. Ito, Y. Kusumi, Y. Maruo, and G. Sano, Customs Officer Iseki, the coolies, I. Asuwa, Y. Yuasa, J. Hamanishi, etc. and the *sendo* Fukano. Shown three pieces of bamboo the accused said he did not know anything about them.

To the enquiry of the Court, the accused stated that he had nothing else to say in defence.

The Public Procurator said the various statements by the witnesses seemed to be a little vague because the trouble occurred in the night time, but that of the officer D. Ito was most trustworthy. The facts that the accused had struck Sano and that the officer fell were clearly admitted by the accused. The accused's plea was self-defence, but that plea could not be entertained, as the trouble had occurred by reason of his unruly conduct.

The Public Procurator added that as there were extenuating circumstances, the accused should be punished with eight months' imprisonment with hard labour.

The accused contended that many coolies had assembled round him and were attacking him. If the police had kept them off, no trouble would have happened. But the officers did not do so till he and Williams had been arrested. His conduct was in self-defence.

The Court retired to consult as to the sentence, and at that time a Japanese messenger from the U. S. Consulate at Yokohama entered the Court and communicated with the translator. The latter conveyed the message to the Judges.

The Judges re-entering the Court, the Presiding Judge stated that the accused was to be defended by counsel and the case was adjourned for discussion only, the trial being concluded.

The Court then rose.

S. ISAACS v. M. ISAACS.

In the Yokohama District Court, the hearing of this case, demanding the return of business

books kept in custody by defendant, was resumed before Judge Kano on Nov. 21st, when Mr. Ideura, Counsel for defendant, asked the Court for a further postponement of the case on the ground that defendant had applied to Mr. R. Isaacs, in New York, senior partner of the firm, in the hope that the dispute might be settled out of Court.

The Court also exhorted the parties to settle the matter, after which the case was again adjourned till Dec. 8th.

CLAIM FOR INSURANCE MONEY.

The case instituted by Oh Tieck, a Chinese, against the Northern Assurance Company, whose Yokohama agents are Messrs W. Strachan and Co., claiming yen 4,945 came up in the Yokohama District Court before Judge Kano on Nov. 21st.

Plaintiff's Counsel stated that the Chinaman made a contract on Oct. 28th, 1901, with defendants insuring sundry merchandise comprising silk goods, furs, etc. for yen 4,945 which were stored in the godowns Nos. 34 and 35 Yokohama. Plaintiff paid a premium of yen 25. After three days, fire occurred at the godowns destroying the buildings together with the merchandise stored. Plaintiff demanded payment of the sum insured, but the agents of the defendants refused the claim.

Defendants' Counsel contended that defendants did not conclude a contract on such merchandise as described by plaintiff. After the fire the place was examined by a surveyor but no articles such as those enumerated by plaintiff were found among the debris.

The parties produced documentary evidence after which plaintiff's Counsel asked the Court for leave to examine Mr. H. C. Pigot and a Chinaman, and Defendants' Counsel also asked for Mr. J. W. Hall, all as witnesses.

The Court decided to do so on Dec. 8th.

THE ALLEGED SILK FRAUDS.

The trial of Messrs. A. Le Prevost and C. Bremer and three Japanese—T. Sawada, Y. Nishida and E. Okazawa—for alleged silk frauds, was resumed in the Yokohama District Court on Nov. 25th, at 9.45 a.m. before Presiding Judge Watanabe, Judge Associates Matsuyama and Nagoya, and Public Procurator Nakamura.

Previous to the assembling of the Court, about a hundred volumes of business books were brought into the Court room as evidence.

On the Court opening (the Judges taking their seats at 9 precisely instead of 9 a.m. as fixed) the Presiding Judge called upon Dr. F. W. Eastlake who, it had been arranged, should interpret in the case and questioned him as to his name, age, residence, occupation, etc. The Judge also described to Dr. Eastlake the persons charged in the case and then instructed him and Mr. Hattori as to their duties, informing them that they must act together, correcting each other, where necessary, and speaking in a voice loud enough to be heard over the whole Court room.

The interpreters occupied seats between the lawyers' table and the bench, the foreigner being accommodated with a table. The seats for counsel were fully taken up, no fewer than eight being present on behalf of the accused.

Alfred Le Prevost was then called forward and having been requested to speak loudly, deposed (through Mr. Hattori): I am an Englishman living at No. 87, 39 years of age. I am a merchant—in silk goods. I was born in Guernsey.

Carl Bremer similarly interrogated, deposed: I am a German, 37 years of age. I was born in Bremen and live at 172 Yamashitacho. I am a merchant with Fraser Farley & Co. and engage in the export of silk and other goods.

Sawada and the other Japanese accused were similarly examined by the Judge.

The Public Procurator then read the forty-two transactions extending from Nov. 28th, 1900, to the end of the following year, which form the basis of the charges against the accused.

The Court interpreter (Mr. Hattori) read to the accused an English translation of the charges, which has already appeared in these columns.

Carl Bremer, whose evidence was interpreted by Dr. Eastlake, deposed: I have never been punished in any way. I have been in Japan since 1890. I arrived in Yokohama in, I think, April.

After coming to Yokohama I was clerk with Otto Reimers and Co. up to 1895. I was general clerk. The firm is engaged in silk and other exports. I went home in 1895 and was in Hamburg with the same firm. I came back to Japan at the end of 1896. I only stayed in Germany one year. After coming back I established myself as Carl Bremer & Co. as silk exporters and general importers. I continued in that business until the end of 1897. After that I went home and then came out to Shanghai. There I established an Austrian firm. I then came to Yokohama and had an office at No. 48. I was not with Mollison & Co. I stayed a few months and then went home again. In about six months I came back here and established myself as a silk exporter and general importer. I am still engaged in that line of business. I have thus been connected with the silk business since 1893. When I was in business for myself I had Japanese in my employment. At first I had 5 to 7 bantos and clerks. When I returned to Germany on the second occasion I gave up my business here, intending to stay at home. I wanted to establish myself at home but I had some difficulty and decided to return to Japan. I did not go to Germany with the view of increasing my business here. I liquidated my business in Yokohama before returning. I gave up business here because prospects were not good. I have only given up my business once. The second time I simply came to look about with the view of establishing and I came back and did so. At Shanghai I was manager of the firm of Hugo Schwerz & Co. It was a general import firm. I took over the business of Fraser, Farley & Co. in 1902 from Mr. James. I first began to talk about it from December or January. I heard from Mr. Le Prevost that Mr. James wished to give it up as he had become director of the Japan Brewery Co. and Le Prevost advised me to take it over as there was some Rangoon business connected with it. (Some misunderstanding arose here because of the interpreter mishearing the statements of the witness.) I understood Mr. Le Prevost had talk with Mr. James. Fraser Farley & Co. bought always silk goods from Cornes & Co. and Mr. Le Prevost wished to keep this business going. In taking over Fraser Farley & Co. I did so on the advice of Mr. Le Prevost. I understood the condition of the firm before doing so.

How did you investigate the state of the firm?—I knew Mr. James did very little business—only the Rangoon business; Mr. James transferred the business to me and guaranteed me that there was nothing outstanding. Mr. James told me that personally. I do not know what the capital of the firm was when Mr. James had it. I took over the goodwill. There was no special price attached to it. The goodwill consisted only of the Rangoon business. (Counsel—Mr. Kishi—interrupted at this point, where the interpreter was speaking at some length in reference to the above answer, and the Judge requested Dr. Eastlake to confine himself to the statements of the witness.) I knew nothing of how many houses the firm was connected with. I only wanted this one connection. I did not care for anything else.

The Court rose at noon.

When the Court reopened there was again a large attendance of spectators.

Carl Bremer was again called to the stand.

What was your object in taking over Fraser and Farley's business?—I arrived here in November and had some orders for piece goods, but naturally I wished to increase my business and therefore I desired to take over Fraser, Farley and Co's. business. It was best for me to secure both the connection and the firm name of Fraser, Farley & Co.

On the application of Counsel at this stage Mr. Hattori took the place of Dr. Eastlake as interpreter.

Examination continued, there were two connections, one in Rangoon, and R. Blankenburg & Co. and it was to secure their business that I desired. The former I expected to export yen 500,000 per annum to. I would only export perhaps twice a year to Blankenburg & Co.

I might have got the Rangoon business otherwise, but I did not try. This seemed the easiest way. After acquiring the business I intended to go on as before; I did not intend to go on without increasing capital and staff. As I increased the business I would increase the staff. I did not pay any money to Mr. James but I executed the orders outstanding on his account. I was dealing with yen 70,000 in my own name. I meant to go on with my own capital. At that time I had no staff; I was alone. When I said I intended to go on as before, I meant that I should get the business of Fraser, Farley & Co. and then get a staff. When I said the same way as before I meant to go on exporting silk goods as before. The staff I should require would be a banto and a godown staff. I engaged first a clerk, then I engaged Nishida. When I bought the firm name I had no arrangements made as to men, I had made no inquiries. I had made no special arrangements; I would have taken men who understood the business. I engaged a staff with the view of doing business. I had already German connections and I wished to increase my connections by getting those of Fraser, Farley & Co. I did not say that all my capital of 70,000 yen was invested in the firm, some of it was elsewhere. I do not know how much I might expect, but my Indian and German business should have been about a million a year. I had in my business money from the banks on which I paid interest.

At the time of purchasing Fraser Farley & Co. was your capital existing?—I had about yen 40,000 in the bank here. I took the firm name on the suggestion of Mr. Le Prevost.

Was there no special arrangement between you and Le Prevost?—None whatever. At first I bought most of my orders from Cornes & Co. but after May Le Prevost had given notice to that firm and came oftener to my office as he wished to join me. He came seldom before that month. Before May he came on account of the orders I had given to Cornes & Co. After May he had his own room upstairs at No. 258, Fraser, Farley & Co's. He did his own business there. He assisted me in my business because I had no employee. When I came out here I had large orders from Bremen and London so I arranged with Le Prevost that he should execute my orders. He first offered to buy from me in 1899 and when I came back in 1901 I remembered that and went to him. I went to him before I bought Fraser, Farley & Co. The understanding was that Le Prevost should quote prices f. o. b., and that his prices should not include more than 2 per cent. as commission and packing. This was when I came out the last time. When he assisted me in my business as Fraser, Farley & Co. I also assisted him in his business. I did so financially. He bought goods on his own account and I financed him. The 2 per cent was Cornes & Co's profit and for packing. There was no commission paid Le Prevost, it was paid to Cornes and Co. After May, 1902, I do not know whether he came oftener to my office than he went to Cornes & Co. He might have been upstairs without my knowing. I got a cler: first then an office boy and then Nishida. I got the last through Le Prevost. He was to inspect the packing, etc. I do not know who came next. Nishida had charge of the godown and engaged the people. Fukuzawa, I think, came in June. Sawada was never engaged by Fraser, Farley & Co. He had no connection with the firm. I got the other men whose names are mentioned to me from Nishida and Le Prevost. Okazawa did office work and wrote invoices. I think all the books were kept by Okazawa but there was another man who might have kept some. I know the papers handed to me. They are abstracts from the purchase and bank books and were made by Okazawa. There were other books, I can say that these abstracts are all right. (Shown invoice book) I think the red ink entries shown me were made in July before the books were taken. I do not think they were made after this case was raised. These entries are always made in the same way to show the profit on the invoices given in black ink above.

Here witness explained that a paper he produced showed the firm that packed the goods

but in answer to the Judge said this document was corrected afterwards. He also said that in case of errors in the packing charges there would be a corresponding reduction in the proceeds.

He continued: The calculations for insurance and shipping were made on actual payments, but the packing charges were deducted roughly. In some cases the packing charges were deducted though they had been paid by Cornes & Co. (The witness was closely interrogated as to when he deducted the packing and wrapper charges. As interpreter and witness stood with their heads close together pointing to "this" and "that" in the book or document before them we cannot pretend to give the final answer.)

Witness continued: I Le Prevost told me to buy from Cornes & Co. through brokers, as Kahn and Kahn's man might come out and it was better that Fraser, Farley & Co's. name should not appear on their books. They had a monopoly for Europe and I had German connections. When Cornes & Co. sold the goods to me through brokers it was thus a local sale. I do not know what contract Kahn and Kahn had with Cornes & Co. I only know what Le Prevost told me when he asked me to use brokers for these purchases. I thought it a proper explanation; I could have bought myself well enough. I made arrangements with the brokers to pay them 2 sen per piece—myself or Fraser, Farley & Co. If I used a broker's name he must have a commission. I thought the explanation quite reasonable as I had no suspicion.

Witness here again repeated that Le Prevost asked him to buy from Cornes & Co. in brokers' names.

The Judge remarked that as it seemed to be the same answer always they might as well stop.

The point apparently that it was being attempted to put to the witness was why he should have entered into an arrangement by which he had to pay 2 sen a piece which he might have saved. At one stage of the case, at the instance of Mr. Akiyama and Mr. Kishi a table had been almost forced between witness and interpreter, so as to make them speak louder, the accused being ordered in addition to stand off some distance, but gradually, and noticeably when a book or document, offered an opportunity they again brought their heads together. It was thus that in his anxiety Mr. Hattori had edged round from his side of the table and no one but the Judge could hear his questions or the replies of the witness or his interpretation to the Court.

When the Judge manifested impatience two or three Counsel rose at once with apologies to the bench and explained to the witness the question over which the trouble arose.

Witness said he paid the commission to the brokers because he could not otherwise use their names and the amount was a very small one.

To the Court—it was about 1 per mil., a very small commission. If he had not used the brokers' names that money would have been saved. The arrangement as to purchases through brokers was that he paid Cornes & Co. by cheque direct each time he got the debit note and the goods receipt. He did not attend to the godown himself and did not know when goods arrived.

The Court rose at 4.20 p.m. to sit again on Friday at 9 a.m.

CLAIM FOR A HORSE.

The hearing of this case, filed by Mr. Geo. Booth against Messrs. Durand, Cobb & Co., claiming return of money paid for a horse whose hoof was found to have a crack after plaintiff had purchased it from defendant's firm, was resumed in the Yokohama District Court on Nov. 25th when Dr. Okada, first military veterinary surgeon, was present in Court to give his opinion about the crack.

The expert witness examined the horse in dispute which was brought into the compound of the Court. His opinion was to be presented in a written statement.

Ch. Takatsuki, blacksmith, was also examined as a witness. He stated that he had twice shod the horse in dispute. The first time was about May 20th, by order of Mr. Booth, and the second time was about June 17th or 18th by order of Messrs. Durand, Cobb & Co. The exact dates he could not tell without looking over his books left

in his house. He examined the hoofs of the horse before he changed the shoes when it was brought to him the first time. He did not see any defect on the hoof though he shaved it a little. He found a crack on the hoof when the horse was brought to him the second time. The size of the defect was about two-tenths of an inch in length. Such a defect might be produced on the hoof after hard employment. Witness was always engaged to change the shoes of the horses of Messrs. Durand, Cobb and Co.

The witness retired from the Court to refer to his books, which he left at his home, to find out the exact dates he had changed the horse-shoes.

After the witness returned to the Court he stated that the first time was on May 28th and the second time was on June 21st this year.

The case was then adjourned till Dec. 4th when the military veterinary surgeon will again appear in Court to give an explanation of the defect in the horse's hoof which he had just examined.

DOERING v. KANNHAUSER.

This case, in which plaintiff claimed for loss caused by breach of employment contract, was resumed in the Yokohama District Court on Nov. 25th.

Mr. Ch. F. Rhine, public accountant, was examined as witness. He stated that he did not examine the business books of Mr. J. G. Doering. He knew Mr. Doering but he never asked witness to examine his account books.

The case was again adjourned till Nov. 30th.

SENTENCE UPON MURDERERS.

Nui Otera, who murdered her husband, a well-known merchant in Osaka, and Y. Namioka, who assisted her, were sentenced in the Osaka District Court on Nov. 25th to death. The woman's mother, Tane, and elder sister, Taki, who were implicated in the crime, were sentenced on the same day to penal servitude for life and for 12 years' respectively.

CLAIM FOR DEPOSIT.

In the Yokohama District Court, the case filed by J. Toki, former employee of the Singer Manufacturing Company, No. 80, Yokohama, against the firm claiming return of three Government loan bonds of the total face value of yen 150, which were deposited with the firm as a guarantee when plaintiff entered their service on Feb. 7th 1903, came up before Judge Kano on Nov. 26th.

Plaintiff's counsel stated that plaintiff was employed by defendants on Feb. 7th, 1903 when he deposited the loan bonds as a guarantee. Plaintiff left the firm on April 10th but defendants refused to return the guarantee.

Defendants' Counsel stated that on leaving the firm, plaintiff recommended a friend, J. Asano, to the firm as his substitute. Plaintiff consequently transferred his guarantee with the firm to his substitute. Since then Asano had embezzled over yen 100 belonging to the firm and left the office. Defendants thereupon sold the three bonds on Aug. 15th for yen 140.02 to clear off the loss caused by the embezzlement.

Defendants' counsel asked the Court for leave to examine Asano and his wife as witnesses. As the witnesses live at Kyoto, the Court decided to instruct the Kyoto Local Court to examine them. The Court then rose.

CUSTOMS APPEAL.

The Minister of State for Finance gave a decision on Nov. 19th with regard to an appeal filed by the Kaitsu Gomei Kaisha, Yokohama, against the Yokohama Customs. The firm imported artificial teeth, and various kinds of rubber plate on July 25th. On the dental rubber included in these, the Customs imposed 10 per cent *ad valorem* duty under No. 14 of the general statutory tariff and the importers lodged a protest on the ground that the duty should be levied at the rate of yen 17.905 per 100 *kin* in accordance with No. 412-B of the tariff in which are enumerated gutta-percha, soft and hard rubber, etc. The appeal was rejected on the ground that the goods in dispute were manufactured only for dental use.

SHIPPING CASUALTIES.

The Osaka Shosen Kaisha's steamer *Asahi Maru* went ashore on Nov. 19th about 2 p.m. on the Liukiu islands. She was floated the same evening. No injury was sustained by passengers or cargo.

A telegram from Moji states that the steamer *Sumiyoshi Maru* (1,300 gross tons) stranded on Nov. 24th off Wakamatsu. The coal which formed her principal cargo was being discharged when she was floated the same night. No damage was sustained.

The British steamer *Elax* ran ashore between the first and second forts off Futsu near Yokosuka on the morning of Nov. 20th while on her way to Singapore, having left Yokohama early the same morning. The Nippon Yusen Kaisha's Shanghai liner *Kosai Maru* passing the spot about 1.30 p.m., reported to the Customs. Later, some officials of the Customs were sent to the scene for the purpose of inspection, and the agents of the *Elax* despatched a steamer to assist her. On the 22nd at 11 a.m., the Yamagata-ya's steamer 14th *Kannon Maru* was sent to the spot to take the cargo of the *Elax*.

The steamer *Elax*, returned to Yokohama, and has undergone an inspection by a surveyor. It is reported that no damage was caused to the hull.

VANCOUVER.

The annual report of the Vancouver Board of Trade, a copy of which we have received, is an exceedingly interesting record of the progress of the various industries of British Columbia in particular, but also of Canadian commerce and trade in general. Here is a list of events in the history of the Dominion which will interest many of our readers:—

- 1793. July 22.—Sir Alexander Mackenzie arrived at Cascade Canal near Bella Coola, Pacific Coast of B.C., being the first white man to cross Canada overland.
- 1816. Common schools established in Upper Canada.
- 1833. August 18.—The steamer *Royal William* left Picton, N.S., for Gravesend, England, being the first steamer to cross the Atlantic.
- 1836. March 18.—Arrival of the steamer *Beaver* at mouth of the Columbia River, (first Pacific steamer.)
- 1836. July 21.—Opening of the first railway in Canada, from LaPrairie to St. John's, Quebec.
- 1838. Steamer *Great Western* steamed to New York from England.
- 1842. Ashburton Treaty signed. Settlement of boundary line between Canada and the United States.
- 1843. Victoria, B.C., founded by James Douglas.
- 1848. St. Lawrence Canals opened for navigation.
- 1854. First screw steamer from Liverpool to the St. Lawrence River.
- 1851. First Atlantic cable laid.
- 1860. Winnipeg founded.
- 1867. July 1.—Formation of the Dominion of Canada.
- 1871. July 20.—British Columbia admitted into the Confederation.
- 1881. May 2.—First sod turned on the Canadian Pacific Railway.
- 1885. Nov. 7.—Driving of the last spike of the Canadian Pacific Railway.
- 1886. Vancouver, B.C., incorporated.
- 1886. June 13.—Vancouver, B.C., destroyed by fire; four houses left standing.
- 1886. June 13.—First through train left Montreal.
- 1887. June 14.—S.S. *Abyssinia* first steamer to arrive in Vancouver from Japan.
- 1891. April 28.—Steamer *Empress of India* arrived in Vancouver via Suez Canal; the mails brought by the "Empress" were landed in Montreal 3 days and 17 hours from Vancouver.
- 1898. Dec. 25.—Ocean Penny Postage inaugurated.
- 1899. Jan. 1.—Letter Post Rate in Canada reduced to 2 cents.
- 1902. Oct. 30.—Completion of Pacific Cable.
- 1903. May 21.—Penny Postage inaugurated with Australia.
- 1903. Population of Canada, 4,500,000.
Population of British Columbia, 200,000.
Population of Vancouver, B.C., 31,000.

A man aged about 25 years was run over on the morning of Nov. 23rd on the railway at a point near Kamakura, sustaining severe injuries.

THE NIPPON YUSEN KAISHA.

The following report was submitted to shareholders at the meeting of the Nippon Yusen Kaisha held on Thursday:—

	Yen.
Capital Paid-up.....	22,000,000
Debentures.....	1,000,000
Reserve Fund, Insurance and Structural Repair Funds, &c.....	9,901,313
Reserve for Equalization of Dividends...	3,300,000
The Directors submit to you the annexed Statement of Liabilities and Assets of the Company, and Profit and Loss Account for the Half-Year, ended September 30th, 1903.	
The Gross Profits of the Company for the past Half-Year amount to yen 3,917,260.910, out of which there has been paid:—	
Depreciation of the Company's fleet and property	720,448.680
Insurance Fund	174,374.090
Ships' Structural Repair Fund	432,957.600
	1,327,780.370

leaving a balance of yen 3,322,771.815, including yen 733,291.275 brought forward from the last Account.

The Directors now propose that yen 129,474.030 be added to the Reserve Fund, raising it to yen 1,914,053.755; yen 800,000.000 to the Fund for the Extension of Services and Improvement of the Fleet, bringing that amount to yen 3,500,000.000; and that yen 71,358.110 be allowed as Directors' and Auditors' fees. From the remainder the Directors recommend a Dividend at the rate of ten per cent, together with two per cent. as special Dividend, thus making twelve per cent., per annum, which will absorb yen 1,320,000.000.

The Balance, yen 1,001,939.675, will be carried forward to the next Account.

REMPEI KONDO,
Chairman.

BALANCE SHEET, 30TH SEPTEMBER, 1903.

LIABILITIES.	Yen.
Share Capital	22,000,000.000
Debentures	1,000,000.000
Insurance Fund	2,253,509.809
Ship's Structural Repair Fund	2,233,749.829
Reserve Fund	1,784,579.726
Dividend Equalization Fund	3,300,000.000
Fund for the Extension of Services and Improvement of the Fleet ...	2,700,000.000
Pension Fund for Employees	200,000.000
Sundry Creditors	4,301,688.792
Amount brought forward from last account	733,291.275
Net Profit for the Half-year	2,589,480.540
	43,096,299.971
ASSETS.	Yen.
Reduced Book Value of Fleet	23,852,760.989
Reduced Book Value of Launches, Barges, &c.....	189,154.761
Payment on account of new ships ...	1,244,248.405
Buildings and Land	3,662,781.314
Yangtze-Kiang Line account	1,531,528.150
Yokohama Stores Department, &c.....	867,782.345
Public Loans and other Securities ...	3,105,824.540
Cash at Bankers and in hand	6,235,574.482
Coal in Stock	18,787.741
Sundry Debtors	2,387,857.244
	43,096,299.971

PROFIT AND LOSS ACCOUNT.

	Yen.
To Depreciation of fleet and property	720,448.680
To Insurance Fund	174,374.090
To Ships' Structural Repair Fund ...	432,957.600
To Reserve Fund	129,474.030
To Fund for Extension of Services and Improving fleet	800,000.000
To Directors' and Auditors' fees	71,358.110
To Dividend (10 per cent.)	1,100,000.000
To Special Dividend (2 per cent.)	220,000.000
To Balance carried forward to next account.....	1,001,939.675
	4,650,552.185
By Balance brought forward 31st March, 1903	733,291.275
By Amount of Gross Profits for the Half-Year, ended 30th September, 1903	3,917,260.910
	4,650,552.185

We have examined the above Accounts, with the Books and Vouchers of the Company, and find them to be correct.

REVIEW.

Japan. Its History, Arts and Literature. By Captain F. BRINKLEY. 8 vols. J. B. Millet Company. Boston and Tokyo.

It is not too much to say that these volumes represent the work of a lifetime and embody the results of patient, scholarly, and laborious investigation carried on without intermission for over 30 years. Both the author and the publisher are to be congratulated on the eminently successful completion of an enterprise of such gigantic proportions as the issue of 12 bulky volumes on Japan and China. The author is to be congratulated on his success in finding a publisher liberal enough, scholarly enough and confident enough to give him *carte blanche* to write in the way that he deemed best and at as great a length as the subjects handled seemed to him to demand. That the immense stock of knowledge which these volumes represent, which hitherto has floated in the author's brain or been embodied in hundreds of fragmentary disconnected notes should now have been given to the world in a permanent form must be equally gratifying to the author and to the learned world. The publisher, on the other hand, was extremely fortunate in finding a scholar with such a large stock of material at his disposal ready for publication. There are two kinds of authors: those who write for the subject's sake and those who write for writing's sake, in other words, for money. The first class of writers have something to say, the second class endeavour to manufacture something to say. A perusal of either of Captain Brinkley's volumes would suffice to convince one that there is no spinning out of the thoughts to the greatest possible length. The author evidently has plenty to say and there are signs of compression everywhere. Captain Brinkley in these volumes has avoided not only the wearisome discursiveness of the local journalist, but his tendency to exaggeration also. There are those who say that exaggeration of every kind is as essential to journalism as it is to the dramatic art, the object of journalism being to make events go as far as possible. But voluminous as is this work of Captain Brinkley's, it is characterized throughout by a scholarly, sober, and judicial tone, and there is no taint of sensationalism anywhere. There are parts of the work, however, which it seems to me are somewhat open to objection on account of the controversial spirit which they display, and which may tend to arouse animosity in the minds of certain readers. But passages of this kind are very rare.

Commenting on the words, *repetitio est mater studiorum* Schopenhauer says:—"Any book that is at all important ought to be at once read through twice; partly because, on a second reading, the connection of the different portions of the book will be better understood, and the beginning comprehended only when the end is known; and partly because we are not in the same temper and disposition on both readings. On the second perusal we get a new view of every passage and a different impression of the whole subject, which then appears in another light." Excellent as is this advice, in the case of Captain Brinkley's 12 volumes on Japan and China I do not pretend that I have gone over every page they contain even once, but I have perused enough of them to obtain a very fair notion of their value to the learned reading public. For Captain Brinkley's work has been written for scholars. There is no popularizing of subjects to catch the fancy of the numerous empty-headed globe-trotters who flock to these shores. Captain Brinkley has rather chosen to appeal to a select few, to experts who value minuteness of knowledge and thoroughness above every thing. The unintellectual New York merchant who gladly pays his 40 gold dollars for the work, to serve as an ornament to his drawing-room table, will yawn over the pages that he happens to glance at during the short intervals of his money-making life. But to scholars of whatever clime and whatever age—for the work will go down to posterity as a monument of painstaking and keen-sighted research—these volumes will always appeal as the fullest and on the

whole best written account of Japan and the Japanese that we possess.

Before proceeding to give an account of each volume separately there are certain general criticisms which it is convenient to set down here. Mr. J. B. Millet has spared no expense in the preparation of these volumes. The printing, paper and illustrations, as was to be expected, are first-class. The consigning of the notes to an appendix at the end of each volume seems to me to be a mistake. Most of the notes are short, and to have to be perpetually going to the end of the book to find comments consisting only of 3 or 4 lines, in one case I have come across, of only one word—"Temmu (673-686)" (Vol. I, p. 252), is giving the reader unnecessary trouble. If the very long notes had to be reserved for an appendix, all the shorter ones should certainly have been converted into foot-notes. Readers are too busy nowadays to spend time in turning over pages unnecessarily. It is to be regretted that more attention has not been paid to the marking of the vowels. Kyōto is printed Kyōtō throughout the whole work volume after volume. But there are more regrettable errors than this. For instance, in Vol. IV pp. 34, 35, the high-class ladies connected with the Tokugawa Court are spoken of as *joro* instead of *jōrō*. The system of spelling is by no means uniform. In Tōkiō the "y" is adopted and it is spelt Tōkyō, but Kyūshū and Chōshū are written Kiushiu (Vol. IV p. 107) and Choshui (Vol. IV, p. 186 *et passim*). Chū is spelt Chiu (Vol. IV p. 34 *et passim*). Go sankyo should be go-sankyō, bugyo, should be bugyō. In some cases the vowel is rightly marked when the word first occurs and wrongly printed subsequently. This is the case with *kōgai* (Vol. VII, p. 210). *Yūjo*, a prostitute, is habitually written *yūjo*. *Shōya* on p. 103, (Vol. IV) should be *shōya*. Ōsaka is written Osaka. If the vowels had all been left unmarked, as is done in the editorial columns of the *Japan Daily Mail*, readers would be less liable to mispronounce names than is the case at present with some of the long vowels marked and others left unmarked and now and again with short vowels marked long, as in Kyōtō, referred to above. I could if necessary furnish a very long list of incorrectly printed words, taking the spelling given in Captain Brinkley's Dictionary as a standard. According to this system, the character ち should be written *chū*, and not *chiu*, as is repeatedly done in various parts of the work under review (*vide* IV, p. 35, *et passim*).

The title of the work would perhaps lead one to expect that Japanese literature as a separate subject would be treated as fully and thoroughly as the history and arts of Japan. But this is by no means the case. Literature is only treated incidentally. Captain Brinkley speaks of Mr. Aston's work on Japanese literature as an "exhaustive treatise" (Vol. I, note 31), but surely this is overrating Mr. Aston's extremely curtailed history of Japanese literature. He himself, I am quite sure, would not regard it as anything more than an introduction to the study of the subject. Being one of a series of "Short Histories of the Literatures of the World," he probably had to reduce its dimensions so much that it amounts to little more than a skeleton. From the point of view of Japanese scholars in this country it is deemed disappointing. Of course Captain Brinkley may be of opinion that Japanese literature would not bear such full treatment as he has given to Japanese history and Japanese art. He may think that it would be quite impossible to make it thoroughly interesting to Western students. Mr. B. H. Chamberlain's opinion on this subject goes for a great deal, as there is no living student of Japanese literature who has more exquisite literary taste than Mr. Chamberlain, and he is undoubtedly better acquainted with the whole range of ancient and mediæval literature than any other European living. In his "Things Japanese" he says:—"Much of that which the Japanese themselves prize most highly in their literature seems intolerably flat and insipid to the European taste. The romances—most of them—are every bit as dull as the histories, though in another way: the histories are too curt, the romances too long-

winded. . . . What Japanese literature most lacks is genius. It lacks thought, logical grasp, depth, breadth and many-sidedness. It is untimorous, too narrow to compass great things. Perhaps the Court atmosphere and predominantly feminine influence in which it was nursed for the first few centuries of its existence stifled it, or else the fault may have lain with the Chinese formalism in which it grew up. But we suspect that there was some original sin of weakness as well. Otherwise the clash of India and China with old mythological Japan, of Buddhism with Shintō, of imperialism with feudalism, and of all with Catholicism in the sixteenth century and with Dutch ideas later, would have produced more important results. If Japan has given us no music, so also has she given us no immortal verse, neither do her authors alone for lack of substance by any special beauties of form. But Japanese literature has occasional graces, and is full of incidental scientific interest." This is the testimony of a scholar who has given the best years of his life to the study of Japanese literature. To have treated the subject exhaustively would have required two or three extra volumes, and so perhaps it is not surprising that, though in the title of Captain Brinkley's book it seems to bear the same rank as is accorded to Japanese history and art, in the body of the work literature is relegated to an entirely subordinate position. Incidentally it is introduced here and there and usually in an attractive way, but it does not form a separate subject. Whether it could ever be made as interesting to readers as the topics to which Captain Brinkley has confined his attention seems to me very questionable, but on the other hand its omission robs Captain Brinkley's work of that completeness which the comprehensive title leads one to expect.

The plan of the work on the whole seems to me excellent, but now and again in going through successive volumes I have come across passages which strike me as being out of place where they stand. I may quote as an instance of this the description of the modern *Sariki* given on pp. 88, 89, and 90 of Vol. IV; which is found in a chapter headed "Criminal Procedure and the Criminal Classes of Tokugawa Times."

Certain old residents in this country with a literary turn of mind will undoubtedly read most of what Captain Brinkley has to say on Japanese life in general; and not a few of these will most probably pronounce Captain Brinkley's volumes to be very pro-Japanese. To me it would appear to be quite absurd to describe a scholarly work of the kind I am reviewing in any such way. In the study of an interesting and in many ways highly talented Oriental race of people like the Japanese, the states of mind indicated by the use of the terms anti-Japanese and pro-Japanese are most unsuitable. A real scholar only desires to find out what is the truth. To blame or to praise an alien people is quite outside the province of an historian. His one object is to collect and to set in logical order all known facts. He will no doubt draw his own inferences from them. In some cases they will be right and in some cases wrong; for to understand an alien race of people so thoroughly as never to misinterpret their words and actions is plainly quite impossible. The aggregate of circumstances combining to form the character of any fairly educated human being is so complex that anything like a complete analysis of them is a work of great difficulty and delicacy, demanding intellectual powers of the highest order. When we come to nations, observations and generalizations can only be carried on in a rough way. But one thing is sure: namely, that without a great deal of sympathy with the individual or the nation studied, a right understanding of motives and guiding principles is unattainable. This sympathy Captain Brinkley undoubtedly has. If he were without it this *magnum opus* would never have been given to the world, but as a rule he does not seem to me to have allowed his sympathy with the Japanese to prevent his seeing their weaknesses and failings, to many of which he repeatedly draws attention. There are a few passages in the work where the author, perhaps quite inadvertently, assumes the controversial tone so

familiar to readers of the *Japan Mail*. These parts of the work seem to me open to the objection that they are calculated to stir up hostility in the minds of certain readers and to convert the questions discussed into party questions. In writing a history, difficult as the task may be, too difficult even for a Lord Macaulay to perform, a man needs to forget that he has ever taken a side in the discussion of certain questions. To state both sides of such a knotty point as Treaty Revision in a thoroughly judicial manner is to any one who has for years argued in favour of one set of opinions as against another set an extremely difficult task. But Captain Brinkley has evidently tried his best to be just to his opponents when discussing this question.

The work may be divided into two distinct parts, one being general and historical and the other extremely technical. To experts in these subjects the volume (VII) on Japanese Pictorial and Applied Art, and the volume on Ceramics (Vol. VIII) will undoubtedly prove to be quite invaluable. The aim of the first six volumes is to trace the gradual development of Japanese civilisation through various stages. (Vide vol. II, p. 245). This is done in a most interesting and thorough manner. The author in every case endeavours to let the Japanese explain their own customs and ceremonies and express their own thoughts. The explanations given by Captain Brinkley are in most cases founded on the writings of native authorities. Of course it is quite impossible to say that in every instance the interpretation given of various customs and phases of Japanese life is correct. There are passages where perhaps the author's generalizations need to be based on a larger number of facts than he has supplied in this work, where he falls back on his intimate knowledge of Japanese ways of thinking and states things on his own authority. This no doubt was occasionally unavoidable.

I will now proceed to deal with each volume of the work separately. I perhaps should mention at the outset that the work as a whole is dedicated to "Sir E. Satow, K.C.M.G., W. G. Aston, Esq., C.M.G., and B. H. Chamberlain, Esq., the three great lights of Japanese scholarship." The following are the titles of the chapters in Vol. I: Chap. I. Present Japan. Chap. II. Primeval Japanese; Chap. III. Japan on the Verge of History; Chap. IV. Japan in the Early Eras of History; Chap. V. The Japanese in the Nara Epoch; Chaps. VI. VII. The Heian Epoch; Appendix pp. 247-260. In Chapter I. Captain Brinkley goes into the interesting question of the particulars in which the Japanese differ from other Oriental nations and especially from the Chinese. He thinks that China has no future before her. "If," he says, "history teaches anything it teaches that there is only one grand climacteric in the career of a nation. Beyond the summit descent is inevitable."

China long ago reached the zenith of her greatness and has been sinking steadily to lower levels ever since." But of Japan he says:—"Her whole career has been a continuous effort of assimilation; her invariable attitude, that of modest studentship. . . . Her people never classed themselves above other nations in a progressive sense. They were always perfectly ready to accept and adopt every good thing that a foreign country had to offer, whether of philosophy, of art, of technique, of administration or of legislation. This is a fact which stands out in doubly leaded capitals on the pages of Japan's story. From the very earliest hours of her career the stranger was welcomed within her gates. Whoever brought to her any product of foreign learning, genius, or industry, whether from China, from Korea or from the South Seas, was received with acclaim, and not merely granted a domicile, but also admitted to many of the most honourable offices the State had to bestow, and the highest ranks of the social organization. Many of her noble families trace their origin to emigrants from the Asiatic continent; many of her artists and men of letters are proud to show a strain of Chinese or Korean blood in their lineage." (pp. 5, 6). Captain Brinkley goes on to show that the break in continuity of the liberal attitude towards foreigners, a break of more than 200 years, was caused by special circumstances and he then pro-

ceeds to contend that when Japan accepted Western civilisation in the latter half of the 19th century she did so in obedience to an inborn disposition which survived the suppression to which it had been subjected in the Tokugawa era. Captain Brinkley in analysing the causes of Japan's successful adoption of many of the best elements of Western civilisation rightly points out "that many phases of her own civilisation were superior to the civilisation of the West when she began to assimilate the better parts of the latter. . . ."

In her social conventionalisms, in her refinements of life, in her altruistic ethics, in many of her canons of domestic conduct, in her codes of polite etiquette, in her applications of art, she could have given to Europe lessons as useful as those she had to learn from it." He next notes the part that ambition has played as a stimulus to earnest effort. As to how far the nation as a whole has adopted Occidental civilisation there is considerable difference of opinion among competent judges. On this point Captain Brinkley goes further than the facts warrant. At least, so it seems to the present writer. On p. 12 in discussing this question Captain Brinkley cites the lack of opposition on the part of the masses to the adoption of Western civilisation by the Japanese Government as a proof of their tacit approval of the course followed. But this argument is quite inconclusive, as indifference, customary acquiescence, servility, and many other mental states produced by the Tokugawa rule are quite sufficient to account for the absence of active opposition on the part of the *hoi polloi* to the schemes of the Meiji Cabinets. But the absence of active opposition to the adoption of a new civilisation and an ardent desire to partake in the benefits of that civilisation are quite different things. The general feeling among native authorities seems to be that the new ideas have not penetrated far into the mind of the ordinary Japanese who lives far away from occidentalising influences. He acts, speaks and thinks very much as his forefathers did in the Tokugawa age. He reads his newspaper, travels by train and makes use of all the many other conveniences of modern life in a very ready and unprejudiced manner, because the Japanese as a race are intensely utilitarian, but he holds on to his old customs and habits with remarkable tenacity. He spends hours, days and even weeks in this busy modern world of ours in the observance of customs or ceremonies that seriously interfere with all business pursuits and callings. All this involves him in pecuniary loss, but for that he does not care a straw. In his eyes a ceremonious, custom-observing bankrupt is a greater hero than an Occidentalized, rough-mannered, wealthy business man. It comes to this, then, that the Western mode of life and thought has not taken hold of the nation as a whole, but only of a certain section of it; of a few thousands among many millions. In a word, the acquiescence of the nation referred to by Captain Brinkley has been passive rather than active. And so the statement that "the masses did not hang back" seems to need great modification. They certainly have been holding back all the time, and numerous have been the articles in Japanese magazines and newspapers which have pointed out the particulars in which the Government and the educated few have been far ahead of the nation as a whole and have figured as the pullers of a heavy load—an indifferent nation. On p. 16 of the volume I am now reviewing Captain Brinkley draws attention to a remarkable fact connected with Japan's relations to the western world. His observations here on foreign opinion about Japan are worth quoting in full. "No one," says Captain Brinkley, "who should tell the Japanese to-day that the consideration they have won from the West is due solely to their progress in peaceful arts would find serious listeners. They themselves held that belief as a working incentive twenty years ago, but experience has dissipated it, and they now know that the world never took any respectful notice of them until they showed themselves capable of winning battles. At first they imagined that they might efface the Oriental stigma by living up to civilised standards. But the success they had attained was scarcely perceptible when suddenly

their victorious war with China seemed to win for them more esteem in half a year than their peaceful industry had won for them in half a century. The perception of that fact upset their estimate of the qualifications necessary for a place in 'the foremost files of time,' and had much to do with the desire they henceforth developed for expanded armaments. Their military and naval forces had been proved competent to beat China to her knees with the utmost ease, yet they proceeded at once to double their army. On-lookers watch these doings with interest and speculate whether Japan's financial resources can bear such a strain, but do not seem to consider seriously what it all signifies, or how Japan accounts to her own conscience for these extravagances." Captain Brinkley then goes on to tell us that the remote cause of Japan's war with China was her desire to establish her supremacy in the Far East. "Japan has risen to the headship of the Far East," continues Captain Brinkley. "Is that the goal of her ambition? One of her favourite sayings is, 'Better be the tail of an ox than the comb of a cock.' She is now the comb of the Oriental cock. That is not enough. She aspires to be the tail of the Occidental ox. How is it to be done? Evidently by following the route that has already led her so far. She cannot turn back. Her destiny forces her on, and there is no mistaking the sign-post set up by her recent experience. She has been taught that fighting expacitly is the only sure passport to European esteem, and she has also been told again and again, is still perpetually told, that her victory over China proved nothing about her competence to stand in the lists of the West. She will complete the proof, or try to complete it. Nothing is more certain, nothing more apparent to all that have watched her closely. Perhaps she has not yet formulated the project to herself in explicit terms. But it has found a lodgment in her breast, and unconsciously she is moulding her actions in obedience to it. These are the reasons that render Japan such an interesting figure. She rivets our attention, not by what she has done, however remarkable that may seem, but rather by what she must still try to do. She has undertaken to demonstrate that an Eastern nation can act a leading part on the same stage with Western peoples, using the same properties and obeying the same directions. It is the first essay of the kind in history, and it will not be consummated without some stirring episodes." There remarks are as true as they are weighty.

On p. 22 Captain Brinkley sneers at those who have attributed to the Japanese want of originality, and quotes Japan's decorative art as a field in which great originality has been shown. Now those who, after a study of the history of which Captain Brinkley supposes them to be ignorant, have reached the conclusion that, compared to Western nations, the Japanese are most certainly deficient in originality would not allow for a single moment that this "new grammar of decorative art" which the Japanese have given to the world makes good their title to be called an original people. They are most certainly far more imitative than original, as Captain Brinkley points out in other parts of his work. The Japanese themselves undoubtedly hold the opinion that the originating and inventive faculty of the Japanese mind, taking the nation as a whole, is in a very poor state of development. This is the verdict of hundreds of school teachers who year in and year out are engaged in the study of the Japanese mind and who ought to know its weak and strong characteristics better than anybody else. This generalization of Captain Brinkley's would need to be supported by a convincing array of facts before it could be accepted as trustworthy. The whole history of the nation shows the Japanese to be imitators and adapters rather than originators. Their literature most certainly displays a striking absence of originality. Hence its lack of interest to men like Mr. B. H. Chamberlain, devotedly as he has studied it. But I must pass on to other subjects.

Captain Brinkley concludes his interesting chapter on present Japan by pointing out that Japan's poverty cripples all her efforts and that no poor nation can become great. "She may succeed in filling her purse before the time comes

to open it, but no resources now in sight definitely promise such a result."

In treating Japanese history Captain Brinkley does his best to separate fact from fable. Whether he has always succeeded it is perhaps quite impossible to determine, so very uncritical and often contradictory are the native records of events which took place even in the early centuries of the Christian era, to say nothing of more ancient times. Captain Brinkley has made the Japanese early records as entertaining as they are capable of being made. Many interesting old customs and not a few quaint superstitions are described in the chapters that go to make up the first volume. Among the notes in the Appendix to this volume there is a long one (Note 4) on nomenclature, which gives a great deal of valuable information in comparatively few words. We are told that there are only 292 family names in Japan, and of these 39 are derived from the nomenclature of the vegetable kingdom, 44 from that of other natural objects, 14 from that of geographical divisions and the rest from ancient official titles, moral or physical qualities and miscellaneous sources.

Into Captain Brinkley's interesting account of the introduction of Buddhism into Japan in the sixth century I cannot go. The rapid success of this religion was almost solely owing to Court patronage and to the readiness with which it modified its original teaching to suit Japanese traditional notions. Buddhism is discussed again in Vol. V. along with other forms of religious and non-religious belief.

Vol. II. treats the following subjects:—Chap. I. The History of the Military Epoch; Chap. IV. Weapons and Operations of War during the Military Epoch; Chap. VI. Refinements and Pastimes of the Military Epoch. On pp. 51, 52 of this volume there will be found an extremely vivid account of the state of Kyōto in the early part of the fourteenth century, which appeared in the form of a placard exposed at the market-place of that city. I can only quote a few lines just to show the raciness of the style:—"The things that abound in the capital now are night-attacks, robberies; forged Imperial decrees. . . . degraded nobles and upstart peers; . . . sycophants and slanderers. . . . shabby hats and disordered garments. . . . wives who simulate piety but live lives abominable to the citizens. . . . Merit is neglected on the one hand, lawlessness is exalted on the other." The manners and customs of the period under review are described with extreme minuteness and the details given throw great light on those remnants of old Japan with which many foreign residents are familiar, but whose origin has hitherto been only very partially known. On pp. 184-186 the peculiar views of the Japanese warrior relating to suicide are concisely stated. "It must be observed," says Captain Brinkley, "that the suicide of the *bushi* was never inspired by any doctrine like that of Hegesias. Death did not present itself to him as a legitimate means of escaping from the cares and disappointments of life." The reasons for suicide given by Captain Brinkley are "to escape the dishonour of falling into the hands of a victorious enemy, to remonstrate against some official abuse . . . or to turn a liege lord pursuing courses injurious to his reputation and his fortunes. This last was the noblest reason for suicide and by no means the most infrequent."

(TO BE CONTINUED.)

KATAOKA KENKICHI.

This eminent soldier, statesman, and Christian, has passed on to higher service. His was a remarkable life: his memory and his influence are a priceless legacy to the Church and to the nation. He was born in Kochi, the same year as President Neesima, in Dec., 1843. His grandfather, a man of remarkable force of character, exercised great influence over the boy, Kenkichi. He taught him to cultivate courage, not the temporary courage of an excited moment, and not simply natural courage, but a courage which has its foundation in right principles and convictions. He would never begin a fight, but if forced into

it, he would fight until it was ended and ended rightly. He was especially trained and taught in horsemanship and the sword exercise, after the manner of the *samurai* of those days.

His father and grandfather both died before he was twenty years old, and he was left the head of the house. When twenty years old, the *Daimio* of the province appointed him to an important office over three counties. He took part in the struggle, at the time of the Restoration, in 1867, being under Count Itagaki and Count Iwakura, in Aizu. He had command of one-half of the Tosa troops. Later, he was appointed drill master of the Tosa soldiers, and he received the commendation of the Emperor for the proficiency of the soldiers under his drill.

In 1871, he went to America, spent a year in study and observation in England, and visited Paris. On his return to Japan he entered the navy and was made Lieut.-Commander. He early espoused the principles of constitutional government and freedom, and in 1874, at the time of the Korean trouble, he withdrew with Count Itagaki to Tosa, because the Government would not declare war against Korea. The next year he joined the newly formed Constitutional party. In 1887, at the time of the Satsuma rebellion, Mr. Kataoka was imprisoned for one hundred days because he was suspected of sympathy with the rebellious party. In 1887, Mr. Kataoka, with others of his province who were in Tokyo, advocated freedom of speech and of the press, and they were ordered to leave the city, but Mr. K. and several others stood upon their dignity as loyal citizens and refused to leave, whereupon he was again thrown into prison, in which he remained over a year.

In 1889, he was elected Speaker of the first provincial assembly elected in his native province Kochi, which included the old province of Tosa. On the first opening of the Diet, in 1890, Mr. Kataoka was elected a member from Kochi, and he was successively re-elected, so that he held the place continuously until the time of his death. He was four times elected Speaker of the Lower House, so that he held that office from 1898 until his death. This was especially remarkable because of the changing and coalescing of parties during this time. Mr. Kataoka was ready to welcome the preaching of the Gospel from the first in his native province, and he was interested from the beginning. He was baptised in the Presbyterian church, in Kochi, in May, 1885, and in Oct. of that same year, was chosen an elder in the church, which office he held until his death. His Christian life has been one constant and consistent witness for Christ.

The first time that the writer had the privilege of meeting Mr. Kataoka he came to my house, in Kyoto, with Mr. Sakamoto, another of those who were imprisoned with him in 1887, and asked for an interview. He then told of his experiences while in prison, how for the first few months he was not allowed to have his Bible, but that after he was permitted to have his Bible with him in the prison, he enjoyed reading God's word and prayer and communion with God, so that his prison became the very gate of heaven to him. He came to love, to pray, for his enemies even, and those who put him in prison, so that his joy was unspeakable.

But he said that he had just passed through the exciting scenes of the second parliamentary election in Kochi, where a desperate effort was made to defeat him, and which nearly succeeded, and he had to use all his power and influence, day and night, for weeks, to prevent bloodshed and civil war in his province, and said he: "I did not enjoy reading my Bible and prayer during those weeks, as I did in prison. I could not keep my mind concentrated on what I read, and my mind wandered off in prayer, and I fear something is wrong with me, that my faith is not really genuine, that there is something deficient about my Christianity."

As he told me this experience, the tears rolled down his cheeks. "And," said he, "I hear that you were in battle many times, during the Civil War in America, and I want to know what your experience was at such times of excitement." I told him my experience and he was greatly relieved. He thanked me most cordially and went

away. That was the beginning of a friendship which has lasted ever since, as I have visited him in his official residence in Tokyo, and he has been my guest here, in Kyoto. He was known always and everywhere as an earnest Christian. He said that he never entered the hall of Parliament and took his seat to preside, without bowing his head in silent prayer for God's presence and guidance. For some time he opened his official residence in Tokyo on each successive Sabbath for a Christian service, and sent postal cards inviting men of rank and influence in the capital to attend, and he secured the most able and earnest pastors in the city to speak at these meetings.

It is said that, a few years since, when Mr. Kataoka's friends wished to see him elected Speaker of the Lower House, some of them advised him to resign the Eldership in his church, as his holding so prominent a place in the Christian Church might prevent his election, but his reply was, "If I am to choose between them, I would rather be an Elder in the Church, than Speaker."

Two years ago, Mr. Kataoka's name began to be thought of as President of Doshisha. When he was approached on the subject, he modestly replied that he was not fit for the position, a feeling which he persisted in expressing for several months. Finally, after repeated persuasion, and on the unanimous request of the Faculty and the Board of Directors of the school, he consented to accept the position, and when he met with the Board of Directors, in Kyoto, in March, 1901, and took the oath of office, and as we were all standing around the table, he immediately said, "I want to pray." And he made one of the most touching prayers to which I ever listened. I do not think there was a dry eye in the room.

At the welcome meeting for him an evening or two later, he said, in response to the words of welcome which had been spoken, that he prayed every day for months that he might not accept this position, but every time he prayed and decided not to accept it, a feeling of unrest remained in his heart, and this feeling grew upon him so that he felt that it was God's voice calling him to the place, and he was thus compelled to accept it. He had two small rooms built adjoining the modest office of the Doshisha, and there he slept, and there he ate his meals which were brought in to him, as he would only occasionally accept an invitation to one of our tables. He wished to be in the school, where all the teachers and students could have free access to him. His powerful influence was felt in the school from the beginning. At the close of the school year, in June, the end of the first term of his Presidency, he addressed the students, telling them that from the opening of the next school year, in September, attendance at morning prayers would be made compulsory, as was formerly the case in the school, and this strict department in the dormitories would be required, that the students would be expected to be, and to behave like, Christian gentlemen, always and everywhere; that these rules were not made for the purpose of punishing any one, but for the sake of the students and to restore and perfect the spirit of the school; but, he added, "If any one feels that he cannot come back and loyally obey these rules, we do not wish to see him back next September; still we earnestly hope that you will all come back." Since that time, chapel attendance has been more general and complete than for fifteen years, and the discipline and spirit of the school have greatly improved.

Mr. Kataoka had hoped in the near future to lay down the burdens of political life and give his last years entirely to educational work in connection with the Doshisha. God, however, had other plans for him. While in the school, last March, he had a serious attack of indigestion, so serious that he spent about two months in the city hospital here in Kyoto, and later he was in a hospital in Tokyo. Last July, he returned to his home in Kochi, and he seemed for a time to be a little better, but his general strength gradually declined, and soon after the middle of October, a serious complication began which soon ended his valuable life. It proved to be appendicitis, the fourth return of that trouble, and he was too weak to endure an operation. The last days

were days of very great suffering. When, however, he was told that some of his friends had said that his Jesus God could not be a very good God to allow one who had been so faithful to Him to suffer so much, he replied that, since Christ had suffered so much for him on the Cross, how could he complain at what he had to bear?

He passed away, twenty minutes before midnight, Oct. 31st. Just before the end came, when his children and grandchildren with his wife and pastor were gathered about him, he asked to have No. 175 of the Japanese collection of hymns sung, the sentiment of which is, "The thought of Jesus' love cheers my heart." The meaning is something as follows: "When I am sick, there is comfort. As I think of the suffering of Christ, my pain completely passes away. When I am suffering, I open my eyes and look upon that servant of God, Job, stricken by Satan and painfully buffeted, and even in the midst of my tears, I praise God. In time of great trouble, there is joy; 'Whom the Lord loveth, he chasteneth.' When I know that He cleanseth me with fire, I can endure the burning of my body." After the singing of this hymn, his pastor led in a short prayer, and soon after one of the little grandchildren went and took his grandpapa's hand and he pressed the little hand, called the child by name, heaved two sighs and was gone.

He leaves a wife and five children, four sons and one daughter. Most of them are married and all of them are professing Christians. The funeral, on the afternoon of Nov. 5th., was a most impressive one. It was thoroughly Christian. A notice was posted in front of the house, after his death, that no flowers would be received. The eight representatives of the Doshisha who went down to the funeral, assembled at the house the day before the funeral, and the sons met us in the room where the plain casket was, and we had the privilege of looking again upon the face of our departed President.

He had requested that a plain pall should be prepared to cover the casket, and that after the funeral it should be presented to the church to be used at other funerals. The casket was covered with this, on each side of which was a large white cross. The Emperor sent a present of one thousand yen, and three pieces of rich white silk. He also sent a decoration, the Third Class Order of the Rising Sun, which last two presents were carried by two persons in front of the casket. The funeral services were held in the large Presbyterian church, which was packed until there was no standing room above or below, and a large crowd stood outside. The services were conducted by Mr. Kataoka's pastor, Rev. Mr. Tada, who preached a very appropriate sermon from the passage in 2 Cor. IV. 16; "Wherefore we faint not; but though our outward man is decaying, yet our inward man is renewed day by day." He dwelt on Mr. Kataoka's strong faith and his earnest Christian life, and especially how his soul triumphed over his body when racked with pain and decaying during the last few days. Brief words were read or spoken by several persons; one speaking for the relatives of the deceased, one for the province of Kochi, and a representative of the Kochi residents of Tokyo read a very touching tribute, written by Count Itagaki. A letter was presented by the Tokyo Y.M.C.A., of which Mr. Kataoka was President, and Rev. Mr. Yoshioka spoke for the Pres. Home Missionary Society, of which Mr. Kataoka was also president, and for the Pres. Church. Rev. Mr. Matsuyama spoke for the Doshisha and Dr. Davis for his Mission and the missionary body in Japan.

The audience was made up largely of the leading men in Kochi, and they listened with marked attention during the two hours' service. The favourite hymn of the deceased, No. 175, was sung and Rev. Mr. McWaine gave the benediction, and then began the two and half miles funeral march to the grave. The leading men of Kochi including one or two from Tokyo, acted as pall bearers, bearing the casket into and removing it from the church, and walking beside it all the way.

It was a perfect cloudless day, and it seemed as if the whole city was out, as they lined the

streets for a mile and a half in serried ranks on each side. All the schools were out in orderly ranks, and all stood with uncovered heads as the casket, covered with a wreath and crosses of flowers, was carried by. Not a smile was seen nor a word spoken, but all stood bowed in silent grief. The widow and all the family, except a few of the grandchildren, walked the whole distance. The grave is prepared in a new spot, on the side of a mountain, overlooking the city and the harbor, with the amphitheatre of mountains and hills around. A large concourse followed the casket to the grave, where a hymn was sung; Rev. Mr. Yoshioka, a former pastor of the Kochi church offered prayer, and the benediction was pronounced just as the sun was setting.

It said of Abel that, "He, being dead, yet speaketh." Mr. Kataoka, also, being dead, yet speaketh. His faith and love and truthfulness, his loyalty and unselfishness, his modesty, and above all his life of helpful service speak to this nation, to the statesmen, to the educators, to the Christian workers, to the Christians, and to the whole mass of the people. He himself has passed on into a higher service, in the more immediate presence of the King, but his life, his influence, his zeal, his character live on, an undying and priceless heritage to the Church of Christ, to the Doshisha, and to the whole nation. Let us thank God for such a life, and such a death, and such a rich heritage!

J. D. DAVIS.

DEATH OF MR. DRESSER.

The *Kobe Herald* records the death of Mr. Charles Dresser, who had been a resident of Japan for upwards of twenty years. The sad event took place at his residence on Friday morning, at Sumiyoshi. Mr. Dresser, who was only forty-six years of age, had been suffering from heart trouble for two months or more, but every hope was entertained of his recovery. He came to Japan late in the seventies to join Messrs. Strome and Co. of Yokohama, and was, later on, associated with Mr. H. W. Lea in founding the firm of Dresser and Holme, the principal partner in which was his father, Dr. Christopher Dresser, of London, who we believe is still living, and who is a notable authority on "Decorative Arts" in general, and on Japanese Arts in particular. He subsequently entered the N. Y. K. service, but has for some years past, as is well known, carried on an Estate Agency and Bill-Collecting business in Kobe.

DEATH OF COUNT HINO.

Count Sukehide Hino, who was suffering from cancer of the stomach and was consequently being treated at the Red-Cross Society's Hospital, passed away on the morning of Nov. 23rd. He was the fifth son of Count Mitsuyoshi Yanagihara, being born on May 19th 1863, and younger brother of Count Sakimitsu Yanagihara, former President of the Bureau of Decorations. In 1883 he was adopted by Count Hino, after which time he succeeded to the title. He was appointed an attendant to the Crown Prince in 1879, and in 1888 he was sent to England for the purpose of completing his education. He stayed there for some years, and on returning from abroad he was again appointed to the household of the Crown Prince and released in 1895. In 1896, he was appointed a member of the House of Peers. He is survived by Countess Tsuru and three daughters.

NEWS OF THE WEEK.

Prince Kan-in returned to Tokyo on the morning of Nov. 24th from Iwate Prefecture, where he was present at a meeting of the branch of the Red-Cross Society.

According to the crew of the steamer *Tairen Maru*, which arrived at Nagasaki on Nov. 19th from Port Arthur, the duty imposed by the Russians at the Chinese port seems to be very heavy. The

Japanese steamer had to pay duty at the rate of *sen* 10 per ton on her hull and at rates between *yen* 3 and *yen* 6 on cargo.

According to a telegram in the *Fiji*, the property of Mr. T. Sakakibara, M.P., living at Tochigi, was sold on Nov. 24th at auction, for the benefit of his creditors.

A counterfeit silver ten *sen* coin was found on Nov. 24th at Asakusa, Tokyo. It was made of zinc with such skill that it could hardly be distinguished from the real money.

A telegram from Nagasaki announces that an engine boiler at Megami quarantine station burst on the evening of Nov. 24th. One workman was killed and another severely injured.

Mr. T. Nagamori, Chief of the Minister's Secretariat in the Department of Finance, resigned on Nov. 26th. He will pay a visit to China and Korea, leaving Tokyo in the beginning of December.

A meeting of the Cabinet was held on Nov. 24th, the conference lasting from 10 a.m. to 2 p.m. The Ministers for Finance, Navy and Foreign Affairs subsequently proceeded to the Palace where they had audience of the Emperor.

Owing to the fluctuations of exchange, states a telegram dated Nov. 25th from Shanghai, would-be buyers of cotton yarn are hesitating over transactions. The market is generally very steady. The nominal quotation is *Ts* 89.

Six bluejackets of the French warship *Montcalm* which is at Nagasaki, quarrelled with some Japanese shopkeepers on the night of Nov. 18th at Tomachi. A policeman and two jinrikisha coolies were injured by the knives of the foreign sailors.

A case of plague appeared on Nov. 22nd at a low class inn, Iwasaki-ya, Miyoshi-cho, Yokohama. The patient was a coolie, B. Sudzuki, (40), who arrived there on the 20th from Iwashiro-cho, Nihonbashi, Tokyo. He died about noon the same day.

S. Hasegawa, headman of the village of Kasugai, Miye prefecture, and five others who were charge with infringement of the Election Law when the election of members for the Prefectural Assembly took place in September, were sentenced on Nov. 15th to from 14 months to 15 days imprisonment with hard labour and a fine of from *yen* 10 to *yen* 4. The *Fiji* states that they forged ballots.

Emperor William sank to his hips in a bog during his recent deer stalking at Rominten. The foresters in attendance pulled him out of the mire, and he continued to hunt, without changing his clothing. Later the Emperor gave orders that 60 pioneers be sent to Rominten from Koenigsberg to drain the morass and afterward fill it up with earth.

The *Newcastle Leader* properties, consisting of a daily, weekly, and evening newspapers, have passed into the hands of Mr. C. Arthur Pearson from the present proprietor, Sir James Joicey, Liberal M.P. for Durham. Including the *Daily Express*, Mr. Pearson now owns eight daily newspapers, having recently acquired the *St. James's Gazette*.

The appeal of Mr. I. Awoki, secretary of the Kyoto Local Government Office, who was sentenced to three months' imprisonment with hard labour, and a fine of *yen* 10 in connexion with the text book affair, was sustained on Nov. 19th in the Tokyo Appeal Court. The sentence was changed to a fine of 25 *yen*. The accused was convicted of a contravention of the Primary School Regulations.

The *North China Daily News* contains a long obituary notice of Mr. John Smedley. He came to Japan in 1869 and put up the pavilions in and around the Yokohama railway station on the occasion of the opening in 1872. He built the Russian Legation in Tokyo, was in 1878 appointed Professor of Architecture and Drawing

to the Tokyo University, but retired in 1880. He left Yokohama for good in the early 90's.

The Marine Engineers Association of Glasgow in a report just issued, announce that an order has been given by some of the largest engineering firms on the Clyde side that in future no engineers over 45 years of age are to be employed. It is understood that the order is an outcome of the Workmen's Compensation Act, which is telling heavily on employers. The Marine Engineers Association declare that a man at 45 is worth two young men, and that the masters will find this out should they insist upon this order.

T. Abe, manager of the Yokohama Omnibus Company, whose vehicles ply between the Hirakuma station and the Kameno-hashi, was assaulted on the night of Nov. 20th at the house of S. Mochida, a stable keeper, No. 192 Yamashita-cho, by three bettoes who had been employed by the Company and been discharged for instigating a strike. The Manager was severely injured and died at the Rokkaku Hospital at noon on the following day. The men were arrested by the Kaga-cho police, as also was the stable keeper under suspicion of having incited the crime.

Mr. Marconi, who arrived at Queenstown from New York on Oct. 9th., stated in the course of an interview that from the day the *Lucania* left port they were in constant communication with America and Cape Breton, and bulletins of news were issued daily for the benefit of the passengers, who were delighted at the intelligence received. He added, "In a short time—say about two months—ordinary commercial and Press messages will be despatched across the Atlantic from London to America and vice-versa. This is the first time that messages have been received on board a liner daily in the Atlantic, and it is a great achievement. When steaming rapidly towards the Irish coast, we received a summary—about 200 words—of Mr. Chamberlain's great speech delivered in Glasgow, which was promptly issued in pamphlet form to the saloon passengers, who were chiefly Britishers and Colonials."

The new first-class British battleship *Duncan*, built and equipped at a cost exceeding one million pounds sterling, was put into commission at Chatham Dockyard on Oct. 8th for service on the Mediterranean station. She is a notable addition to the Fleet under the command of Admiral Sir Compton F. Donville, and is to take the place of the first-class battleship *Cesar*, which was recently sent home to pay off. The *Duncan* steams 19 knots per hour, and will be one of the four fastest British battleships in the Mediterranean. Captain Henry B. Jackson, F.R.S., commissioned the *Duncan*, which was furnished with a crew consisting of 725 officers and men. The *Duncan* is a 14,000-ton battleship, and is equipped with a main armament of four 12-inch 50-ton breech-loading guns, and twelve six-inch breechloading guns, and an auxiliary armament of twelve 12-pounder quick-firing guns, and six 3-pounder quick-firing guns.

With the exception of a very trifling amount, says *Bradstreet's*, the bonds of the United States Government are held at home. This fact is rendered plain by the figures given in the annual report of the Register of the Treasury. The bonds held in the United States foot up a total of \$786,262,000. Government securities to the amount of \$15,065,750 are credited to foreigners, but it should be borne in mind that \$11,154,500 of these are held on deposit in the United States under the legislation requiring foreign insurance companies to deposit with the insurance commissioners of the States in which they do business a certain amount of bonds in proportion to the business done to secure their policy-holders. The bonds held by individuals abroad amount to only \$3,911,250. Of the domestic holdings the consols of 1903 appears to be the most popular with the national banks. It appears that out of a total of \$506,493,350 at the date of the report, the banks had on deposit with the Treasurer of the United States as security for circulating notes and for deposits \$458,438,100.

MAURICE RUSSELL,
Hon. Treasurer.

THE TOBACCO MONOPOLY LAW.

The Bill relating to the monopoly of tobacco manufacture, which has been prepared by Government for presentation in the 19th session of the Imperial Diet, is reported to consist of ninety articles, the more important of which are as follows:—

Art. I.—The manufacture of tobacco shall be undertaken exclusively by Government.

Art. II.—No tobacco shall be imported except by Government or by persons duly authorized by it.

Art. III.—No tobacco shall be cultivated except by persons who have obtained permission from the Government.

Arts. IV. to XXI. provide for the cultivation of leaf tobacco as well as for compensation relative to it. As regards manufactured tobacco the rules are:—

Art. XXII.—No manufactured tobacco is allowed to be sold except by Government or by persons other than the original sellers or retailers nominated by it.

Regulations with regard to tobacco sellers as well as to the sale of tobacco shall be determined by Ordinance.

Art. XXIII.—No tobacco retailer is allowed to sell any manufactured tobacco to consumers except at the price fixed by the Government.

Art. XXIV.—No tobacco dealer is allowed to sell any manufactured tobacco the wrappers of which have been opened, or altered, or damaged.

The rules for the enforcement of this law were laid down in the form of a supplement, the more important provisions of which are as follows:—

Art. LXVIII.—This law shall come into force on the 1st of June in the 37th year of Meiji (1904) with the exception of the 2nd clause of Article XXII. and of Article LXXII. which will become operative from the date of the promulgation of the law in question.

Art. LXX.—The following properties shall be taken over by the Government and compensation paid therefor:—

1. Entire plant and roll paper exclusively used for the manufacture of tobacco as they exist on the 31st of May in the 37th year of Meiji (1904), plant and paper for the preparation of all kinds of tobacco alone being excepted.

2. Plant exclusively used for the manufacture of tobacco as it exists on the 31st of March in the 38th year of Meiji (1905).

3. Leaf tobacco held by manufacturers of tobacco or by sellers of leaf tobacco on the 31st of March in the 38th year of Meiji (1904).

Art. LXXI.—With regard to leaf tobacco for export held by Government at the time of the enforcement of this law, the Leaf Tobacco Monopoly Law shall continue to be applied.

Art. LXXII.—Leaf tobacco which is found in the possession of tobacco manufacturers other than those of cut tobacco, on the 31st of May in the 37th year of Meiji (1904) may be transferred to manufacturers of cut tobacco or dealers in leaf tobacco by the 20th of June in the same year, or application may be made to the Government for disposing of the same.

Art. LXXIII.—The Government may take possession of land and buildings used for the manufacture of tobacco and also the plant in such factory for the same purpose, which may be found to exist at the time of the promulgation of this law. In such cases, however, compensation shall be paid.

Art. LXXIV.—With regard to articles that are held by tobacco manufacturers for the manufacture or wrapping of tobacco and to plant actually used for the manufacture or equipment thereof, application may be sent to the Government for the purchase of the articles as well as the plant in question, provided the same do not fall within the purview of Art. LXX. Such procedure, however, is limited to articles or plant that are found to exist on the 31st of May in the 37th year of Meiji (1804) in the case of manufacturers of tobacco other than that which was already mentioned, and to those existing on the 31st of March in the 38th year of Meiji (1905) in the case of cut tobacco manufacturers.

The kind and quantity of articles as well as the classification of plant for the disposal of which application may be forwarded to the Government shall be determined by Ordinance.

Art. LXXV.—The Government shall pay, when demanded by manufacturers, an amount of money corresponding to one year's revenue accruing from the manufacture of tobacco.

With regard, however, to owners of land and buildings used for the manufacture of tobacco, but neither purchased nor taken possession of by the Government in their entirety, an additional 50 per cent. of the amount of money above mentioned shall be granted.

The foregoing provisions shall not apply to tobacco manufacturers who were designated as the former sellers of tobacco.

The revenue or income specified in the 1st clause of this Article shall be in accordance with the average taken for three years from the 34th to the 36th year of Meiji (1901-3). With regard to manufacturers who commenced business after February of the 34th year of Meiji (1901) the amount shall accord with the average for two years from the 35th to the 36th year of Meiji (1902-3), and in the case of persons who commenced business after February of the 35th year of Meiji (1902) the amount shall be determined with reference to the income secured in the 36th year of Meiji (1903).

Art. LXXXII.—Manufactured tobacco existing at the time of the enforcement of this Law as well as cut tobacco prepared by cut tobacco manufacturers before the 31st of March in the 38th year of Meiji (1905) shall not be dealt with according to the present Law, and may be held, transferred, or bought.

Art. LXXXIII.—The amount of money to be paid according to Article LXXV. shall be in Exchequer Bonds to be issued in accordance with Article XC. Any amount less than 50 yen, however, shall be paid in cash.

Art. XC.—The Government may, in order to meet the expenses necessary for the carrying out of this Law, issue Exchequer Bonds or obtain loans to the amount of 25 million yen at interest below 6 per cent per annum.

The Government is also empowered to issue Exchequer Bonds for the redemption of the loans so obtained.

The Exchequer Bonds as well as the loans specified in the foregoing two clauses shall be redeemed within seven years from the period of issue or acquisition. In case Exchequer Bonds are issued for the redemption of loans, the period of redeeming the Bonds in question shall be reckoned from the year in which the loans are obtained.

With regard to Exchequer Bonds the Redemption Loan Bonds Regulations shall be applied, except where provisions are made in this law. The manner and contract for obtaining loans, the period of the redemption thereof, and all other necessary processes shall be determined by the Minister of Finance.

CORRESPONDENCE.

GOOD WORK OF THE S. A.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It may be of interest to the community to hear something of the excellent work carried on by the self-denying officers of the Salvation of Army at their Naval and Mercantile Home in this city. In addition to their regular good work among the merchant seamen and the distressed of all kinds who become stranded at this port, they have during the past nineteen days while the Naval men have been here, supplied them with 5,040 meals and provided 981 with sleeping accommodation (striking figures considering there has been no long leave for the British ships). Hundreds of men have been entertained by day and in the evenings in their large sitting room, with games, music and song, while occasional services have been conducted and great good done among the men.

That such operations as these carried on as they are in our midst without self-interest, and entirely for the benefit of the men and the community, entails a tremendous amount of physical and mental effort on the part of the officials goes without saying, and they are well worthy of the good-will, sympathy and support every section of this community. Yours, etc.

OBSERVER.

JAPAN SABBATH ALLIANCE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A Convention of the Japan Sabbath Alliance will be held in the Ginza Kaikan, 22 Nishikonyacho, Kyobashiku, Tokyo, on November 28th, beginning at 9.30 a.m., when reports from the President, the Rev. H. Kozaki, the Treasurer, Dr. Wyckoff, and representatives of the various Branches will be presented and plans considered bearing on the future of

this important movement. Besides Japanese speakers, the Rev. B. A. Cassidy, M.A., so long connected with the Lord's Day Alliance in Canada, will address the Convention. It is intended to have special sermons in the Tokyo Churches on Sunday the 29th inst., bearing upon the Sabbath question.

The Alliance was organized at the instance of the Missionary Conference of 1900, in co-operation with the Japan Evangelical Alliance, and therefore has a claim upon the loyal support of all Christian workers, both Japanese and foreign. So far there has not been as hearty an interest in the movement as was expected, and it is even suggested by some that the whole enterprise be abandoned, while others think it should be made part of the work of the Japan Evangelical Alliance proper. If must be decided at the coming Convention what course shall be adopted. Whatever the method, it is surely our duty to labour and pray for the establishment of the Christian Sabbath, the non-observance of which has so weakened the spiritual life of the churches in Japan.

Brethren, we appeal to you not only to pray that this movement may be divinely guided, but if possible to give evidence of your sympathy and support by being present at this convention.

All Christian workers, everywhere throughout the country interested in this vital question are earnestly requested to attend.

Yours, etc.,

HARPER H. COATES.

Secretary.

ST. LUKE'S HOSPITAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In view of the fact that through the kindness of Sir Claude and Lady MacDonald a concert is to be given next month at the British Legation for the benefit of St. Luke's Hospital, Tokyo, and as during the past few days I have been asked by several foreigners if the Hospital does charity work, I would like to have the following statement made public.

St. Luke's Hospital is the property of the American Church Mission in Japan, and from its Board at home receives annually a certain amount to assist in defraying its running expenses. Its doors are open to every one, rich or poor, irrespective of Religion or Nationality and most of our work is charity. We have ten private rooms for well-to-do patients, either Japanese or foreign, and the proceeds from these go entirely to support the Hospital. Attached to the Hospital is a Dispensary for out-patients, open daily, except Sunday, from 8.30 to 12; and three days of the week, Tuesday, Thursday and Saturday are entirely given to charity cases. Two Japanese physicians, Dr. Scriba and I, are in attendance and Dr. MacDonald is the consultant on General Practice. Cases requiring it are at once entered in the Hospital Wards, either free or at a nominal charge, according to their circumstances. Run in connection with the Hospital is a Pharmacy and all earnings from this Department also are used to support the work. The recent additions to the building containing the Operating and Sterilizing Rooms and out-patient Department, have heavily taxed our resources, and we are very much in need of a separate building to care for infectious cases. It is to assist in erecting that that the concert is to be given. The running expenses of the hospital and the Dispensary during the past twelve months have amounted to about yen 13,000.00 and the Appropriation from the Board in America covers about one-fifth of this, while the rest is made up from the hospital's earnings and contributions from friends.

Thanking you in advance for inserting this letter, I am, Respectfully yours, R. B. TEUSLER, M.D.
Physician-in-Charge

Tokyo, November 21st 1902.

THE NIPPON RACE CLUB.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I should like to say a few words about the skeleton programme, just published by the Executive Committee of the Nippon Race Club. The annual general meeting of the Club intervenes before the Spring Meeting, and to the new Committee then elected will fall the work of filling in the details of the final programme.

AUSTRALIAN GRIFFINS, 1904.—I understand that there are 30 of this class on order, and if the five races allotted to them are properly arranged, we shall probably see better fields and better racing in this class than ever before. Barring the winner of the Grand Prix from the other races except the handicap, is a step in the right direction, and if the Grand Prix and the $\frac{3}{4}$ mile races are placed together on the first day, the $1\frac{1}{2}$ mile on the second, the handicap and consolation on the last day, we are almost certain to see four winners in the class, particularly if the winner of the $\frac{3}{4}$ mile is penalized 5 lbs. in the $1\frac{1}{2}$ mile race. The handicap may bring out another winner, and five winners in this class would be a happy change from what we have seen hitherto.

to. By this arrangement the winner of the Grand Prix would not be able to run in the newcomers class on the second day, and the Champagne Cup might come in usefully, which it has not done in the past. The $\frac{3}{4}$ mile race on the first day should be run immediately after the Grand Prix, so that owners will not start the same horse on both.

AUSTRALIAN GRIFFINS, AUTUMN 1903.—There are three races for this class, and I hope that they will be arranged one for each day, and I also am of the opinion that winners at the meeting should be excluded on the 2nd and 3rd days, so as to give us three winners in this class at the meeting. It has been shown over and over again that a 5 lbs. penalty will not stop the best horse from winning again. The winners on the 1st and 2nd days can run in the handicaps for all Subscription Horses on the 2nd and 3rd days.

JUNIOR CHAMPIONS.—I am surprised to see this race still in the programme, and I think we can safely predict the winner, even to-day. No doubt the Committee were led away by the fact that the Junior Champions race at the recent meeting was won by a newcomer. The winner was carefully nursed for this race, whereas the other two starters had both run a hard race the same afternoon. It is reasonable to suppose that the result might have been different had Izumo been kept fresh for this race. Griffins can never be expected to show their best form at their first meeting; the time is too short, particularly as they are new to the game of racing, and do not know how to do their best. I am sure that the majority of owners will agree with me that this race should have been left out.

ALL SUBSCRIPTIONS.—To my mind there are too many races for this class; one over $\frac{3}{4}$ mile on the first day, a handicap on the second day, Champions and Consolation handicap on the third day would have been ample. I presume the $\frac{3}{4}$ mile, and the 1 mile weight for age with penalties, will be on the first day. This will necessarily divide a small class. I am very glad to see that at last the Prix des Haras has been left out. It is absolutely impossible to bring together in a handicap the best of the old horses and the newly arrived griffins. The latter should not be allowed to enter for handicaps for the All Subscription Class. On the other hand it is not impossible to bring together the second meeting class, and the all subscription class. In fact the top division in the former class usually show from quite up to the average of the all subscription class.

CHINA PONIES.—The skeleton programme arranged for China subscription ponies should be the death blow to this class, and to my mind the sooner the class dies the better. The newcomers, as usual, are well provided for, but it is after its first meeting that the China subscription pony becomes worthless. The Autumn 1903 class have two races, and can also run in the one race for All Subscription China ponies. But the Ladies Purse, the Blue Ribbon of the Spring Meeting, is given, I understand, for the sake of old tradition to All Comers, presumably because it has almost always been won by a privately imported pony. For the second time in history this race is set down as a handicap. But there is some mistake here, for this is the only race open to all comers, and how can they be handicapped? If a new pony is brought up, is he to be handicapped on what can be seen of his form during training, or is he, as an unknown quantity, to be given top weight? In the latter case no one is likely to bring over a pony, to run at top weight in one race only. I think another race or two should be allotted without delay to All Comers, to induce those so inclined to send for ponies and make up a full class, for even though there may be only one privately imported pony in training, he cannot now be debared from running in the Ladies' Purse. The popular idea would have been to give this race to subscription ponies only, and thus encourage this class. Had this been done I venture to say that the race would have been one of the most interesting events at the meeting, for no one can pick out the best of the six griffin winners at last meeting, and there are also the old subscription ponies and the best of the newcomers—an open card, to say the least of it. On the other hand the champion of last meeting would have to carry a crushing weight to give the subscription ponies a chance, for I have come to the conclusion that to bring China ponies of different classes together it is necessary to put weight on to the good ones, to stop their times down to the times the inferior ponies are capable of doing. It is useless to take weight off the inferior ponies, as with only a featherweight they cannot do the times the better ponies are capable of.

Yours, etc.,

D. M.

Owing to a sudden gale, a fishing junk capsized on Nov. 18th off Oshima island belonging to Idzu province. The crew of six were in great danger but were saved by the steamer *Tsu-un Maru* of the Miura Transportation Company.

NEWS FROM PORT ARTHUR.

(FROM OUR CORRESPONDENT.)

November 5.
Not many particulars about the recent naval review at Talienwan have leaked out so far, and it is doubtful if anything of real importance ever does leak out. It cannot be said, however, so far as I am aware, that any special significance attaches to this function which takes place every year with just the same ceremony, unless that this year it took place at Talienwan instead of Dalny. The number of pennants is given at 29. "Part of the squadron," says the report in the *Novi Krai*, "was absent, being on different stations." I suppose this alludes to different vessels that were sent out lately on secret missions.

On Sunday week the Viceroy left Port Arthur on the *Askold*. The morning after his arrival in Talienwan the review began, but, of course, the newspaper account of it merely refers to the reception of officials by the Viceroy, the handing of reports to the latter by various authorities, and many other matters of detail. The bulk of the fleet was in Talienwan, however, drawn up in three lines and occupying the whole breadth of the spacious harbour.

"We had only succeeded," says the *Novi Krai's* correspondent, "in casting a hurried glance at the ships when a little wreath of smoke suddenly appeared on the side of the flagship and was immediately followed by the report of a cannon. . . . Immediately afterwards all the ships were wrapped in smoke; the salute was being fired. The squadron presented a striking appearance, half covered as it was with smoke which was, however, cleared away in a few moments by the wind. When the last wreaths of smoke had disappeared, our cruiser"—(from which I conclude that this report in the Port Arthur paper was written by an officer in the suite of Admiral Alexieff) "answered. We then proceeded, steaming slowly, between the lines of ships until at 3 p.m. we anchored in a central position. Immediately after we had anchored, a steam-cutter pushed off from the side of the flagship, the *Petrovskoy*, bringing the commander-in-chief of the squadron, Vice-Admiral Starck, with Flag-Captain Ebergard, who came to present the usual reports to the Viceroy. The Vice-Admiral left again for his own ship at 4 o'clock. . . . The weather continued fresh and the waves in this harbour were much stronger than in Port Arthur."

"On the 13th of October the weather was as fresh as on the previous day. At first, indeed, it was so bad and the waves were so large that it was regarded as hardly possible for the cutters and sloops to venture out in order to make an inspection of the fleet. The visit to each of the ships was therefore deferred but the vessels were signalled to go through their exercises. About 12 o'clock Engineer Sakharoff, the Governor of Dalny, came on board with his report. After having conversed for some time with his Excellency on the affairs of his district, the Governor was invited to breakfast." (This functionary is said to have presented a pitiable sight as he stood on the quarter-deck in presence of the Admiral and his staff, as wet as if he had been keel-hauled all the way from Dalny. The Admiral kindly told him to go and dry himself before he presented his report.—Translator.) After breakfast the weather remained unchanged and indeed the wind only grew stronger, raising such waves as rendered it quite impossible for the Admiral to carry out his inspection on that day."

"On the 14th October," says the *Novi Krai*, "the weather in the early morning seemed to show a decided improvement, the wind having fallen and the waves having decreased in height so that it was thought possible for the sloops to venture out. After the hoisting of the flag, orders were given to get ready the steam cutter and at 8.30 the Viceroy, accompanied by officials of his staff, proceeded on board the flagship, *Petrovskoy*. Ascending the deck of this armour-clad, the Viceroy was met by the officers of the squadron and by the commander, Captain (1st rank) James. Having received the usual report from the latter, the Viceroy passed down along the front of the line formed by the officers of the ship and the officials belonging to the staff of the chief of the squadron, asking about the health of each person and questioning each about matters of navigation. He then asked after the health of the men who were doing sentry duty and even of the members of the band. He also spoke to and questioned the men whose watch it was. After this he proceeded to inspect the ship. He examined all the deck and made a detailed examination of every nook and corner. He even visited the lazarette, where he questioned the doctor regarding the patients in his care, and conversed with the patients themselves. Then he went on deck again and watched with a critical eye the men go through their drill. The result was that he became fully convinced that the ship was kept in good order, was even a model vessel, and that the instruction of the men in their various duties was carefully attended

to. Before leaving, he thanked all; and at 10.30 proceeded in the company of the chief of the squadron and the officials of his staff on board the armour-clad *Sevastopol*. As the cutter went off the ship's company sent a loud "Ura!" after the Viceroy. The Viceroy had previously commanded that no salute should be fired."

In the same way, was next inspected the *Sevastopol*. On the conclusion of the inspection, the Admiral thanked all but especially the commander, and made a little speech in which he reminded the men of the glorious name their vessel bore and hoped that they would always prove themselves the brave lads they had ever been, mindful of the labours of their fathers—the men who defended Sevastopol.

After tiffin, the Viceroy proceeded again in his cutter between the lines of warships, before directing his course to the iron-clad *Peresvet*, over which floated the flag of Rear-Admiral Prince Uborkov. The chief of the squadron and his staff happened to be on board at the time and met the Viceroy. The Viceroy left warmly praising the commander and his men and proceeded to the iron-clad *Retevan*, which he carefully inspected.

The review came to a conclusion at 5 o'clock in the evening at which time the Viceroy took leave of all on board the *Retevan* and descended to his cutter amid loud cheers from the crew of the warship.

THE CRISIS.

(FROM A PORT ARTHUR CORRESPONDENT.)

Things have quieted down very much here and I am glad to say that a peaceful issue of the Manchurian complication may now be expected. There is not such activity in naval and military circles, and various steps that have been taken of late by the authorities seem to indicate that, in their opinion, peace is assured. But I suppose one cannot say "all's well" until the Japanese are of the same way of thinking. The Port Arthur paper of Sunday last contained the following leading article on this subject. As will be seen, the writer begins by expressing his surprise that Admiral Alexieff has been taken for a jingoist and goes on to say that he is no such thing, that he is the representative of the Czar, which is the same thing as saying that he is in favour of peace. He points out that the Viceroy is not, any the more, a man of the peace-at-any-price sort. If war is necessary he will not shrink from it but will embark on it with vigour and resolution. Russia is then represented as being in favour of the opening of Manchuria to foreign trade, so long as her own interests are safeguarded, and as not objecting in the least to Japanese emigration to the peninsula of Korea, so long as the independence of Korea is not menaced. Reading between the lines, and relying on other sources of information, I believe that the idea is to interfere with Japanese operations in Korea as little as possible, and to satisfy the demands of foreign trade in Manchuria as much as possible though not, I am afraid, to such an extent as the average foreign trader wishes. Meanwhile a tight hold will be kept on Manchuria, in fact I cannot believe that the Russians will ever relax their grip on the three provinces in the way some Japanese and English publicists imagine. They believe, rightly or wrongly, that if they allow the practical sovereignty of Manchuria, which they now possess, to pass out of their grip, Port Arthur and Dalny will remain on their hands dry and withered memorials of blasted hopes, like trees whose roots have been cut away. They believe that the Manchurian railway will lose half its raison d'être and more than half its prosperity. They believe that the restless activity, commercial and political, of the Englishman and the Japanese, combined with the astounding business genius of the American will make of Manchuria a busy hive of industry in which the English tongue will be the "lingua franca" and in which the in frequent Russian trader will be stared at as an unknown and mysterious visitant, while the Russian troops will be left perched high and dry on the bleak rocks of Liaotung like St. Simon on his pillar with nobody caring in the least whether they stay there or come down. Such is the fate with which the Russians believe they would be threatened by the flooding of Manchuria with traders other than their own, and sooner than submit to such a fate and be laughed at for centuries hence by the Chinese and the world generally for their enormous and unremunerative outlay in Manchuria and especially at Dalny and Port Arthur, they would, I believe, be prepared to see extreme measures taken for their eviction.

I need not point out, however, that the Russians are mistaken if they imagine that any foreign nation wishes to see them deprived of the fruit of their vast labours in Manchuria or that a via media may not be found. There is also another side to the picture they draw of the irresistible Anglo-Saxon advance, and that is the irresistible Muscovite advance; but this side of the question has often been presented in your columns by abler pens than mine.

The redoubtable *Novi Krai* has, then, come forward with the olive branch in its hand and asks in a gentle voice, expressive of pained surprise what all that noise is about, why those rude, warlike clamours? That is the latest development. The Port Arthur journal begins its leading article on the Manchurian question with a quotation from the *Chuo Shimbun* to the following effect:—"The Emperor of Russia has now organised in the Far East a special form of Government, calculated to develop Russian business and commercial interests. In our opinion this step dissipates the phantom of war and contributes to the maintenance of peace."

The *Novi Krai* continues as follows:—"This esteemed organ of the Japanese Press is undoubtedly right and it is a great consolation to us to be able to cite its testimony on this subject, in view of the fact that the Japanese Press seems to be generally convinced that the Viceroy of the Far East belongs to the war party in Russia and that his appointment to his present position means the triumph of that party. This opinion is, of course, absurd. As the *Novoe Vremya* recently pointed out when dealing with the establishment of the Viceroyalty, the Viceroy of the Far East is carrying out a plan previously drawn up by the Russian Czar, and care for the preservation of peace is the principal problem of his Viceroyalty."

"It must not be forgotten, on the other hand, that there cannot be the least doubt that the choice of his Majesty, at such a difficult moment in the political life of the Russian Far East, has fallen on a man who has shown in his past career as a ruler of distant possessions of Russia, that he possesses a firm will, a clear well-defined grasp of the rôle which Russia has to play here, and the ability of keeping his Majesty constantly informed of the condition of things out here. There is in this idea of the nature of the Viceroyalty a great difference to what the *Novoe Vremya* says further, but we agree with that paper when it remarks that the important question is 'in whose hands will be the immediate control of Russia's policy on the shores of the Pacific?' The clear result of the policy,—that is in the policy of having some strong personality to whom the direction of Russia's policy out here can be entrusted—is seen in the fact that we have now got a permanent policy in the Far East. That policy has also given birth to that now celebrated question, the evacuation of Manchuria; and the Japanese are right, a thousand times right, when they recognise in Adjutant-General Alexieff a man who has a great influence on our policy here, not of course because he belongs to the war party, but because he, in virtue of the power given to him, knows when it is possible, so long as does not compromise the dignity and the prestige of Russia and of her Imperial rule, to make concessions for the sake of peace to the interests of other Powers. We have now reached a moment when all the Powers, and particularly ourselves and the Japanese, pay great attention to their interests in this part of the world. Seasonable and just concessions will doubtless dissipate the phantom of war. Although not much light is thrown by the Press on the Russo-Japanese negotiations, there is no doubt that the situation is now easier. Russia will not surrender her interests in Manchuria, but she will not hinder the development of the business and commercial interests of other Powers at the moment when the negotiations of the Russians with the Chinese have been brought to a conclusion."

THE "NOVOE VREMYA" ON THE CRISIS.

(FROM A PORT ARTHUR CORRESPONDENT.)

11th November.

The *Novoe Vremya* of 21st October has the following article on the present Russo-Japanese crisis:—

"The Russian newspapers of the Far East and the European Press published in the same quarter say that a period of calm has made its appearance in Russo-Japanese relations and that a serious conflict between the two Powers is now out of the question, though at one time it seemed possible enough. We are very glad to hear such good news; nevertheless the important question of the preservation of peace cannot be lightly disposed of, and we cannot therefore unfortunately receive as gospel the cheerful information in question. The Press of the Far East tells us to-day that there will be no war; yesterday it told us that war was unavoidable; to-morrow perhaps it will again assure us that we must inevitably come into collision with Japan. But on what foundation are all these rumours,—past, present and future,—based? Evidently on the prevalent tone of the Japanese newspapers. These papers began by crying out that it was necessary to make war on us and everybody began to talk about the crisis; after a while these cries decreased and everybody began to feel comfortable and to affirm that the danger of war was minimised."

"To attach such importance to the Japanese Press would not be extraordinary if that Press were always a model of accuracy and famous for its faithful expression of the views of its Government. But it cannot be said that the Press of any country is a faithful exponent of its Government. It certainly cannot be said of the Japanese Press, which is to a large extent subsidised by the English and the Americans. Japanese papers are sometimes in fact edited directly by representatives of these nationalities."

"On this account there is no need to be alarmed to any particular extent by the furious outbursts of the Japanese Press, or to be lulled into security by its optimistic predictions. One must estimate for himself how matters stand in the Far East, especially when there is anything serious the matter there, and must not allow himself to be influenced by the tone of the Japanese newspapers."

"It would be mere affectation on our part to deny that our relations with Japan are rather strained at present. They have been strained for some time past, although there was no aggressive action on our side which might be regarded as having brought about this estrangement. At all events Japan pushed on the warlike preparations of her fleet, which she sent to manoeuvre in the Straits of Korea, and which she also stationed in a line from the island of Kargodo to the islands of Tsushima and Kiushiu. Soldiers were placed on board her transports and brought to Masanpho. This was done by way of transport exercise of course. The men were not landed but returned to the island of Tsushima. We just mention this little fact to give the reader an idea of the acts which are accountable for the present crisis in the Far East. There is a wide interval of course between such acts and an actual collision. A demonstration carried out by a fleet is a comparatively cheap performance, as Powers which possess a strong fleet are not averse to showing it off, especially if by doing so they think they can bring pressure to bear on a neighbour."

"But this demonstration will have no effect on Russia, i.e. it will not make us too yielding in our relations with the Japanese. The object we have in view in the Far East is the development and prosperity of our frontiers, and to abandon all measures for the lawful defence of our interests we do not desire to do and we cannot do. We do not know if the Japanese are aware of this, but at all events the warlike preparations of Japan do not decrease; on the contrary they are being carried on with redoubled energy. This is a more important fact, in our opinion, than the change in the tone of the Japanese Press. The Press may write in a peaceful strain but, meanwhile, the Japanese Government has given orders for all its military officers at present travelling or studying in foreign countries to return at once to the Fatherland. The firm of Krupp, of Essen, have just received from the Japanese Government a telegram asking them to make haste to fulfil certain orders previously placed with them. Coal for the use of the fleet is also being bought in enormous quantities and a great stock has now been accumulated. In the Japanese arsenals work ceases neither day nor night. Many transport vessels have already been chartered and the Government is putting forth all its efforts to charter as many as possible. All these symptoms, and also the brisk exchange of views between Tokyo, Washington, and London force us to be cautious, and to place little trust in the peaceful tone of the Japanese Press. We do not want, however, to say that the danger to the maintenance of peace in the Far East is very great. The peaceful tendency of Russia's policy cannot surely lead to a crisis. We only ask, however, for the exercise of caution and a due and critical estimate of the condition of affairs in the Far East."

"Our negotiations with Japan still continue, and it is to be hoped that both parties will finally arrive at an understanding which will safeguard the interests of Russia and assure to Japan the peace which is indispensable for her welfare."

HORSE SALE.

The following prices were realised at the sale of race horses held by Mr. Jno. W. Hall on Wednesday afternoon:—

	Yen.
Hatsukaze, Bay, Australian Mare.....	640
Tanuki, Dun, China.....	120
Redstart, Chestnut, China.....	60
Swift, Brown, China.....	120

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE PANAMA CANAL AFFAIR.

London, November 19.

At Washington last evening Mr. Hay and Sr. Varilla signed a Panama Canal Treaty which awards the United States absolute sovereignty over the Canal strip, and provides that the United States shall pay Panama ten million dollars on the understanding that Panama will allot part to Colombia as its share of the Colombian Debt.

Later.

The Canal Treaty provides that the Canal shall be neutral to all and that all nations shall be on the same footing.

THEIR ITALIAN MAJESTIES.

Their Italian Majesties drove in full state from Paddington Street to the Guild Hall. They had the heartiest possible reception everywhere in crowded and decorated streets. The Prince and Princess of Wales and the Duke and Duchess of Connaught welcomed them on their arrival.

THE BALKANS.

The Austrian and Russian Governments have informed the Porte that unless an answer is given to their last representation within the next few days, they will demand a reply direct from the Sultan.

ITALIAN ROYALTIES IN ENGLAND.

London, November 19.

The Italian Foreign Minister has had long conferences with Lord Lansdowne, British Minister for Foreign Affairs, and subsequently was received in audience by King Edward.

GERMAN DECORATIONS FOR JAPANESE NOTABLES.

London, November 20.

The Kaiser has conferred the Order of the Red Eagle, First Class, on Lieut.-General Terauchi, Japanese Minister of War, and the Order of the Crown on His Excellency Kohei Sufu, Governor of Kanagawa prefecture.

PANAMA'S INDEPENDENCE GUARANTEED.

The Panama Canal Treaty has been published. The United States guarantees to maintain Panama's independence, and will pay Panama a quarter of a million dollars annually after 1912.

NEW ZEALAND'S NEW TARIFF.

The New Zealand preferential tariff has been passed by the Council and will be enforced immediately. It provides a removal of the duty on tea grown in British dominions.

ASIA MINOR.

London, November 22.

The American squadron has been ordered to leave Beirut.

MR. CHAMBERLAIN'S CAMPAIGN.

Mr. Chamberlain, speaking at Cardiff, in a speech characterized by the utmost confidence, thought that the tariff reformers had made good progress, and that Free Trade was doomed.

LORD CURZON'S TOUR.

Lord Curzon has arrived at Muscat where he held a grand durbār.

THE ITALIAN ROYALTIES.

Later.

Their Italian Majesties have left Portsmouth for Rome after a most successful visit, socially and politically.

THE TRANSVAAL PROBLEM.

The Transvaal Labour Commission in their report say that the shortage of labour in the Transvaal amounts to 241,000 men, including miners, who amount to 130,000. It is expected that the Transvaal Council will be invited to pass an ordinance in favour of importing alien labour.

THE EMPRESS OF RUSSIA.

London, November 23.

Bulletins show that the Czarina is still suffering from much inflammation in the middle of the ear, but she maintains her strength.

THE PANAMA TROUBLE.

The President of the Republic of Colombia, in an address to the American people, expresses confidence that the people of the United States will not permit a violation of the treaties such as President Roosevelt has committed at Panama; he has also appealed for the moral assistance of Venezuela.

THE FRENCH NAVY.

London, November 24.

The French Naval budget for 1904 requires 311½ millions of francs. The reporter of the Budget, comparing the naval strength of France and Great Britain, says that whereas the proportion of the naval forces in 1898 was France two, Great Britain three, the proportion now is, France two, Great Britain four. He believes that Great Britain in 1907 will possess double the number of fast cruisers.

ANTARCTIC EXPLORERS.

Later.

Members of the Swedish antarctic expedition under Nordenskiöld, which sailed in the autumn of 1901, have been rescued from Louis-Philippelund by the Argentine warship *Uruguay*, which was sent in search of them. Their ship was crushed by ice on the 12th of February.

SOMALILAND.

No general forward movement is expected in Somaliland before the 20th of December.

RISING IN JOLO.

The Americans have routed 2,000 Moros on the island of Jolo, killing 300.

DEATH OF SIR BLUNDELL MAPLE.

London, November 25.

Sir John Blundell Maple, M.P. for the Dulwich division of Camberwell, is dead. [Sir John Blundell Maple was head of the famous firm of upholsterers and was a great patron of the

turf, capturing many of the big prizes in the course of his career. He was a Conservative in politics.]

RUMOURS.

The Japanese Legation in London knows nothing about the disquieting rumours coming from St. Petersburg.

A DESPERATE LUNATIC.

A lunatic gained access to the room of Mr. K. Grahame, Secretary of the Bank of England, and fired four shots from a revolver at him, but none took effect. The police were obliged to use a fire-hose to effect the arrest of the man.

THE ANTARCTIC EXPEDITION.

The Nordenskiöld exploration expedition reached to 66 degrees south of the equator. Their vessel, the *Antarctic*, was crushed and sank in Ambas Terra Bay. The expedition, after a perilous journey of 16 days, reached Poulett Island, where they wintered.

ENGLAND AND FREE TRADE.

London, November 26.

At a great meeting of the Unionist Free Food League, held in London, over which the Duke of Devonshire presided, His Grace declared that the policy of the Government was now before the country. He thought within limits that there was a good deal to be said in favour of retaliation, but he had no adequate knowledge of the Government's intentions, whereof he had grave misgivings. He asked how long the Unionist leaders intended to sit silent spectators while their late colleague assumed all the duties, privileges, and responsibilities of leadership.

TURKEY AND REFORMS.

Later.

After protracted councils, the Sublime Porte has accepted the Austro-Russian reforms in principle, with the reservation that everything calculated to humiliate Turkey must be avoided.

DISTINGUISHED PATIENTS.

The latest news is that inflammation has spread to the inner ear of the Tsarina, and the pain it is causing prevents sleep.

The last bulletin regarding the Kaiser says that His Majesty still needs to spare his voice. He is undergoing massage of the larynx.

(RECEIVED AT THE LEGATION OF FRANCE.)
FRANCE AND SIAM.

Saigon, November 21.

The Chamber has commenced the discussion of the Budget of Foreign Affairs. M. P. Deschanel, former President of the Chamber, declares that he rejoices at the friendship with England and Italy, but that the Russian alliance should remain the keystone of French politics. So far as concerns the Siamese question, M. Deschanel explains that France has no intention of conquering Siam, but that she has the duty of not abandoning her *protégés*.

NEWS FROM PARIS.

Saigon, November 22.

Speaking in the Senate, M. Waldeck Rousseau, formerly First Minister, opposed the amendment which forbids all religious congregations to engage in secondary instruction. M. Combes, First Minister, and M. Clemenceau supported the amendment, and it was adopted by a majority of eleven.

In the Chamber of Deputies M. Deloncle has asked M. Delcassé, Minister of Foreign Affairs, to furnish explanations about the affairs of Siam and Yunnan.

November 23.

Their Italian Majesties have returned to Italy.

It is believed that there exists between

Italy and England an arbitration treaty similar to that existing between France and England.

The Japanese Prime Minister has declared to an English journalist that the majority of the Japanese are hostile to a war with Russia.

FRANCE AND SIAM.

Saigon, November 25.

In the Chamber of Deputies M. Delcassé, replying to Deputy Deloncle, declared that the treaty of 1893 with Siam not having produced the results hoped, he wished to try another policy founded on reciprocal confidence. But Siam had not seized the occasion which was offered her to show that she could appreciate the spirit of last year's convention. The French Government had therefore been obliged to seek in complementary dispositions the guarantees which were wanting in the conditions of the Court of Bangkok. In the meanwhile (apparently M. Delcassé refers to the conclusion of a new convention or treaty) all the conditions of the treaties anterior to the convention not executed, of 1902, would be strictly observed.

The Chamber, by a large majority, adopted a motion of Vice-President Etienne and M. Deloncle, declaring that the Chamber counts on the Government to make the treaties of 1893 and 1896 be respected on the Mekong.

MOROCCO.

With regard to Morocco, M. Delcassé said that the last word in that country should belong to France, whose action is essentially pacific.

ARMAMENTS.

The Chamber, in the sequel of a passionate debate, rejected a motion supported by the Socialists, which invited the Government to concert with other Powers with a view to the limitation of armaments.

M. Delcassé declared that it was not for France to take the initiative in such negotiations.

The Chamber approved by a large majority the language of the Minister of Foreign Affairs.

FRENCH EDUCATION.

Saigon, November 26.

The Senate has voted the law relating to secondary education.

(FROM THE "DEUTSCHE JAPAN-POST.")
THE AFFAIR AT CHEMULPHO.

Berlin, November 20.

The Russian Government declares that the affair at Chemulpho is unfortunate in regard to the claims for satisfaction from both Powers, but on the other hand it will not interrupt the continuing of the Tokyo conferences.

FRANCE AND SIAM.

The *Figaro* denies strongly the reports that the relations between France and Siam are interrupted. The report is stated to be a Siamese invention, but the firmness of the French Government in regard to their claims in Siam is emphasized.

GERMAN ACTIVITY PRAISED.

M. Lockroy, the former French Minister of Marine, has publicly stated his appreciation of the activity of the Germans in China.

PEACE RESTORED.

It is reported from German Southwest Africa that the Germans at Warmbad are unmolested on their farms. The Bondelzwarts have been surrounded. The other native tribes remain quiet.

THE TSARINA.

The Empress of Russia is suffering from typhoid. The disease is of a mild form.

THE RAISER.

November 22nd.

The small operation wound in the throat of Kaiser Wilhelm is nearly entirely healed. The Kaiser will next month make several journeys in Germany. In the Spring, perhaps, a recreation trip to the South of Europe will take place.

THE TSARINA.

The Empress of Russia, who is suffering from typhoid, is feeling better. The inflammation has begun to decrease.

PEACE PROSPECTS.

A report in the *Manchester Guardian* which gives an interview with the Japanese Premier, Count Katsura, regarding a peaceful settlement of the Manchurian and Korean questions, is considered in Berlin to be correct and is well received.

CHANTABUN.

France has occupied the Siamese frontier town of Chantabun and will hold it till the pending affair is settled by treaty.

MOROCCO.

The endeavours for a common loan by England and France regarding a definitive regulation of the Morocco question have been given up.

TURKEY.

The situation of the Turkish Sultan is more determined. It is probable that, after a strong indication by Germany, the Sultan will accept the reform programme, which establishes a perpetual control of the Turkish officials in Macedonia by Russian and Austrian consuls.

PANAMA.

The new Panama republic is acknowledged by the United States, and Germany will follow soon. France will agree, if the satisfaction of some demands are guaranteed. England demands as a condition, that the republic of Panama, having been till now a part of the Columbian Federation, take over a part of the debts of Columbia.

THE PRUSSIAN ELECTIONS.

Berlin, November 23.

The elections for the Diet of Prussia (Abgeordnetenhaus) had the following result:—

- 147 Conservatives (formerly 143).
- 55 Free Conservatives (57).
- 97 Clericals (100).
- 79 National Liberals (76).
- 31 Progressists (36).
- 13 Polish members (13).
- 11 In no party (8).

No Socialists.

THE ITALIAN ROYALTIES.

Berlin, November 24.

The King and Queen of Italy have returned to Rome. The press are unanimous in stating that new political stipulations were not made.

THE BALKANS.

The Balkan situation has improved so far as Russia is concerned. The Sublime Porte is going to accept the Macedonian reform programme.

THE KAISER.

Berlin, November 26.

The German Reichstag (Parliament) has been convoked for the 3rd of December. Kaiser Wilhelm will himself read the speech from the throne. On the following day the Kaiser will take part in the Court hunting in the forests of Letzlingen. The trip to the South has been postponed. It is possible that the Kaiser will make a Mediterranean trip, perhaps combined with a visit to Egypt, before the winter is over.

FRANCE AND ENGLAND.

M. Delcassé, the French Minister of Foreign Affairs, has made a declaration concerning Morocco and Siam, which, however, does not satisfy the English press.

FRANCE AND THE LOST PROVINCES.

In the French Chamber of Deputies a violent debate took place, caused by a proposal for demobilization. A big majority of the deputies expressed themselves to the effect that, as before, the recovery of Alsace-Lorraine must be always aimed at.

THE ALLEGED ANGLO-ITALIAN TREATY.

The report that in London an Anglo-Italian arbitration treaty has been made is denied from Rome.

ALARMIST RUMOURS.

The alarming despatches of the London *Daily Mail* reporting troubles in Korea are unfounded.

THE TSARINA'S ILLNESS.

The typhoid of the Tsarina has become worse. The disease is a very painful one.

THE DISTURBED ISTHMUS.

In the Panama Republic a new revolt broke out endangering the Free State.

ANTARCTIC EXPLORATION.

The South Polar ship *Gauss* of the Drygalski expedition arrived at Kiel. The Nordenskjöld expedition was found, all belonging to the same being alive.

SUDDEN DEATH OF A BISHOP.

Bishop Anzer, who had worked for a considerable time in China, has been received by the Pope. A short time after the meeting he fell sick and died of palsy.

(FROM THE "JIJI SHIMPO.")

EARL PERCY.

London, November 18.

Earl Percy was present at the dinner of the China Association last night and in the course of a speech said that he had no information yet regarding the delay in the evacuation of Manchuria, as to which Russia had assuredly pledged herself to Great Britain to do so on a given date.

LORD CURZON.

Lord Curzon, Governor-General of India, has arrived at Bushire where the Shah of Persia welcomed him.

THE ITALIAN ROYALTIES.

The King and Queen of Italy are staying at Windsor, where they were welcomed in the grandest manner.

THE ITALIAN ROYALTIES.

London, November 19.

The King and Queen of Italy have been splendidly entertained at the Mansion House. The King replied cordially to the toast of his health.

The roads through which their Majesties passed were elegantly decorated, and at night were illuminated. The Italian residents were much delighted.

RUSSIAN REVOLUTIONISTS.

The *Cologne Gazette* states that the revolutionists are taking active movements at St. Petersburg. The police are carrying on domiciliary searches to find evidence to implicate political conspirators.

PANAMA CANAL TREATY.

The United States have concluded with the Republic of Panama a treaty with regard to the canal.

THE ITALIAN ROYALTIES.

London, November 21.

The King and Queen of Italy have returned home. An important conference was held last night by the Ministers of State for Foreign Affairs of Great Britain and Italy, after which the Italian Minister had audience of King Edward. Political concord between both countries has been established.

THE CANAL TREATY.

The U.S. Government guarantees the independence of the Republic of Panama. The latter concedes to the former a strip of ground crossing the Isthmus ten miles in width.

MR. CHAMBERLAIN'S POLICY.

Mr. Chamberlain's protective policy is gaining popularity. Last night he delivered a speech at Cardiff which was enthusiastically applauded.

A FRENCH EXPEDITION.

London, November 23.

Serious fighting has occurred at Kanem, a district in the Sahara, with the result that the French detachment retired, and many natives were killed or wounded. Thirty-three French soldiers were killed.

DEATH OF A RUSSIAN PRINCE.

Prince Soltikoff is dead.

(FROM THE "N.-C. DAILY NEWS.")

"STAT SUPER VIAS ANTIQUAS."

London, November 13.

The Pope, in the speech made on the occasion of the first Consistory, rejected the idea that the papacy could be dissociated from politics. He is bound, he said, to follow the path of his predecessors. The Pope must be free from the influence of any outside power, and therefore he lamented the loss of the temporal power of the papacy.

CHINESE LABOUR FOR THE RAND.

The Johannesburg Labour Commission has signed its report. It is understood that it makes no definite recommendation of the importation of Chinese labour.

A DARING ROBBERY IN THE TRANSVAAL.

London, November 14.

As a train was ascending an incline between Pietersburg and Nylstroom, two men entered the baggage van, overpowered the escort, and stole ten thousand pounds sterling in specie consigned to the Standard Bank at Pretoria.

ILLNESS OF LORD ROBERTS.

Earl Roberts is suffering from pneumonia.

OPENING OF THE BULGARIAN PARLIAMENT.

The Bulgarian Sobranje has been opened. Prince Ferdinand received an ovation.

In his speech from the throne he emphasised his desire to maintain good relations with the great liberator, Russia, and other States.

THE CIVILISING INFLUENCE OF TURKEY.

It is officially declared at Salonika that fifteen thousand Bulgarians have been killed in European Turkey since the 15th of April last.

THE TRANSVAAL.

The attack on the train in the Transvaal is symptomatic of the condition of the country, which is filled with desperadoes, mostly out-of-work.

SOUND ADVICE FROM NEPAUL.

London, November 17.

The Premier of Nepal, which is bound by treaty to assist Tibet in resisting invasion, has sent a strong dispatch to Lhasa, protesting against the attitude of the Tibetans, and warning them that, in view of the circumstances, Nepal's assistance will be limited to advice.

This advice is embodied in nine paragraphs, strongly urging the Tibetans to come to terms with the British.

The Premier incidentally refers to previous rumours of negotiations between Tibet and Russia, Tibet's denial of which enabled Nepal to continue friendly relations.]

IRRITATION AGAINST THE TURKS IN BULGARIA.

London, November 18.

A conspiracy among some of the younger officers in the Bulgarian army, to create a frontier incident and force on a war with Turkey, has been discovered at Sofia. One hundred and forty of the guilty officers have been removed from the army.

SIR HENRY BLAKE'S FAREWELL ADDRESS.

Hongkong, November 19.

Sir Henry Blake, in his farewell address to the Legislative Council, reviewed his five years' administration at length. He said that the sanitation difficulty must be solved by the creation of a new city by resumption, resale, and reconstruction. It has been decided to recommend the formation of a body of trustees at whose disposal funds will be placed for remodelling this overcrowded City. The colony in every direction, Sir Henry said, is instinct with boundless activity. The revenue, which was \$2,784,840 in 1898, is estimated for 1903 at \$6,208,308.

ITALY AND GREAT BRITAIN.

London, November 19.

King Edward, toasting their Italian Majesties, said that he recalled as though it were yesterday the visit to London of King Emmanuel's illustrious grandfather forty-eight years ago. "We were then at war," the King continued; "thank God, we are now at peace. It is the aim of both countries to maintain peace, and work together on the path of progress and civilisation."

The Italian Foreign Minister, in an interview with the representative of Reuter, declared that the policy of Italy was a policy of peace based on the Triple Alliance.

The policy of Italy in the Mediterranean and in Africa is entirely in harmony with that of Great Britain.

THE KING AND QUEEN OF ITALY IN ENGLAND.

London, November 20.

Their Italian Majesties drove in full state from Paddington to the Italian Embassy, where they received the members of the Italian colony in London, and thence to the Guildhall through crowded streets which were charmingly decorated. They met with the most hearty reception everywhere. It was a lovely winter's day.

The Prince and Princess of Wales and the Duke of Cornwall awaited their arrival at the Guildhall, where they took luncheon, attended with the fullest civic ceremony.

King Edward and their Italian Majesties dined privately and subsequently attended the theatre. A supper followed at which there were two hundred guests.

THE ANTI-SEMITIC OUTRAGES AT KISCHINEFF.

The trial has begun at Kischineff of thirty-six Christians and one Persian arrested in connection with the Jewish massacres last April. The witnesses number 569, and the proceedings are secret.

(FROM THE "SHANGHAI MERCURY.")

FIGHTING IN THE PHILIPPINES.

Hongkong, November 16.

A wire from Manila states that the Moros attacked Malabuni in the island of Mindanao with a great force just after General Wood had left for Jolo. Five Americans of G. Company of the 23rd Infantry were killed. The Moro casualties are not stated. The Moros were 1,500 strong, with five hundred Remington rifles and plenty of ammunition.

General Wood has eight companies of Infantry and four companies of Cavalry and one mountain battery.

The prospects look serious.

PURCHASE OF STEAMERS BY THE N.D.L.

Hongkong, November 16.

The Norddeutscher Lloyd has purchased two and chartered for a long term, three of Rickmer's steamers which were running to Bangkok with Chinese emigrants in opposition to the Norddeutscher Lloyd. The amount paid for these steamers has not been stated.

EXPORTS.

RAW SILK.

The depression noted in our report last week continues and prices are declining, dealers being anxious to get rid of some of their holdings. Stocks have accumulated to something like 20,000 bales. The export since July now amounts to 35,480 bales, of which America has taken 21,971.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 5TH, 1903.

MARRIAGE.

At the British Consulate, Yokohama, on Dec. 1st, 1903, before John Carey Hall, Esq., H.B.M.'s Consul-General, MAUD S. TOMLINSON, second daughter of John Tomlinson, Esq., Crouch End, London, to ARTHUR H. J. WINDETT, eldest son of Arthur H. Windett, Esq., of Hornsey Rise, England.

DEATH.

At her residence, 119-B, Bluff, on Dec. 3rd, at 3.15 p.m., REBECCA CAIN, widow of the late Captain John Cain of Liverpool, and Douglas, Isle of Man, in her 71st year.

SUMMARY OF NEWS.

THE *Nichi Nichi* states that the Imperial Diet will probably be opened on Dec. 8th.

MR. S. KINOSHITA, a Tokyo lawyer, was arrested on Nov. 30th on a charge of alleged fraud.

MR. PAK YONG-PO, the well-known Korean refugee, left Kobe on the Nov. 28th for Tokyo.

PRINCE HIGASHI-FUSHIMI left for Saseho on Dec. 2nd. Prince Kanin will leave on December 4th for Yamagata.

THE Empress who has been slightly indisposed since Nov. 25th, is reported by Tokyo papers to have recovered.

THE Empress dispatched a telegram on Nov. 30th to the Tzarina of Russia, expressing profound sympathy as to the illness of the latter.

THE Japanese Consul at Manila telegraphs that the circulation of Mexican silver coins in the Philippines will be prohibited on Dec. 31st.

A TELEGRAM from Hakodate states that the repairs of the Russian steamer *Progress*, which

sustained damage when in collision with the Japanese steamer *Tokai Maru*, are expected to be completed before Dec. 10th.

THE Chinese Customs at Shanghai recently decided to employ four Japanese recommended by Mr. Megata, Director of the Tax Bureau.

WE learn from the authorities of the Yokohama Sanitary Office, that three plague patients are still at the Manji Hospital. They are improving.

A STEAM launch collided with a lighter on Nov. 27th off Etchujima, Tokyo, and the former sank. The crew and passengers were saved by the lighter.

THE Rt. Rev. Bishop Foss, and Mrs. Foss, returned to Kobe by the N. Y. K. mail steamer *Tamba Maru* on Thursday. Bishop Foss is in excellent health.

THE shareholders of the Nippon Kemmen (silk and cotton) Spinning Company held a meeting on Nov. 26th when they decided to wind-up the concern.

A COOLIE who was working on board the German mail steamer *Prinz Heinrich* fell down the hold of the steamer on Nov. 28th sustaining severe injuries.

WE understand that Mr. Caesar Hawkins has been appointed Manager of the Hongkong and Shanghai Banking Corporation at Yokohama, and will take over his new duties in the New Year.

THE Hokkai Shogyo Bank, Sapporo, held a general meeting on Nov. 26th when the shareholders decided to suspend payment of dividends for five years. A new President was elected.

PROFESSOR S. TANAKA, of the Imperial College of Agriculture, who was suffering from consumption for a long time, died on Nov. 24th at Akashi where he was staying for the sake of his health.

A TRAIN was d-railed soon after leaving the Yokohama station on Nov. 27th at 9.13 p.m. A severe storm prevailed at the time, but after two hours work the train was righted and continued its journey.

A TELEGRAM from Nagano states that a farmer murdered two women on the night of Nov. 27th by shooting them with a rifle. He then committed suicide by shooting himself. He had burned his house before committing the murder.

Y. MIYAUCHI, a clerk in the Nagaya Clock Manufacturing Company, was arrested on Nov. 26th at the hotel, Odawaraya, Onoye-cho, Yokohama, on a charge of having forged a draft for yen 500 on the Meiji Bank, Nagoya.

A COOLIE employed on a lighter was arrested by the Harbour police on Nov. 30th on a charge of having stolen thirteen bags of American flour from a lot which Captain Weston took delivery of the previous day from the steamer *Tosa Maru*.

A MAN was arrested on the night of Nov. 30th at the restaurant Seiyon-tei, Minami-Nakadori, Yokohama. He is said to have murdered an old woman in Tokyo on Nov. 16th. The man was removed to the Honjo police station, Tokyo.

MR. M. SAKAI, an official of the Department of Communications, who was charged with having received a bribe from a merchant patronized by the office, was released on Dec. 1st on the ground that the evidence against him was insufficient.

THE death has taken place in England of Mrs.

Borrodale, who in 1862, was one of a party of foreigners attacked by Japanese between Yokohama and Tokio, and who had a marvellous escape. One of the party, Richardson, it will be remembered, was murdered.

A GOODS train which left Itabashi on Nov. 26th at 7.55 p.m. was derailed at a point near Mejiro station and ran down the hill-side causing severe damage to the locomotive and cars. A conductor had his feet smashed. The cause was the negligence of a pointsman.

THE members of the Privy Council held an extraordinary meeting on the morning of Nov. 28th and discussed the proposed revision of the regulations as to military uniforms. The *iji* states that General Terauchi, Minister for War, was present to give explanations. A resolution was arrived at before noon.

THE Pope has requested the Congregation of Cardinals to hasten its decision in the matter of the beatification of Joan of Arc, which was delayed during the last months of Pope Leo's life. Mr. Lorenzelli, the papal nuncio at Paris, hopes to present the canonization of Joan of Arc as a peace-offering from the Pope to France.

THE Yokohama Board of Trade (formerly the Yokohama Foreign Chamber of Commerce) was recently ordered by the Government to amend some of its regulations. This having been done, its representative applied for an official permit on Nov. 30th. Tokyo papers believe that the permit will shortly be granted.

THE Pope on Oct. 29th received a Venetian lady who was a friend of his while Patriarch at Venice. She states that the Pope said that within the next year he hoped to make a visit to Venice, and she confirmed the report of negotiations for a reconciliation between the Italian Government and the Vatican.

THE Yokohama Rice Exchange applied on Nov. 30th to the Yokohama Municipal Office asking for the privilege for reclaiming 55,300 *tsubo* of the foreshore along Takashima, which permit had been granted to the city, the guilds of rice dealers and brokers in Kanagawa, jointly. The Rice Exchange intends to build godowns on the reclamation.

THE Department of Finance is reported by the *Yorodzu* to have decided to submit amended regulations with reference to banking in the coming session of the Imperial Diet. The principal alterations are: (1) the capital of a bank must not be less than yen 500,000; (2) directors of a bank are prohibited from taking charge of any other banking firm; and (3) interest should not be allowed on current deposits.

EXPERIMENTS are now being made at Fiume, by Austrian naval experts, with a new pattern of torpedoes of remarkable power. Their explosive force exceeds anything known at present, and they are provided with a steel casting capable of resisting the highest pressures. The length of the torpedo is from six to seven yards, and they can be launched at a distance of 3,500 yards without deviating a yard from their course.

ACCORDING to the *Yorodzu*, a suspicious looking man was arrested on the afternoon of Nov. 30th in front of the villa of Marquis Ito, Oiso. He was immediately removed to the police office for examination. The man was found to possess a short sword concealed in a bundle of clothing and stated that his name was Zenzo Matsumo (45), and that he came up from Tokyo the previous morning to pay a visit to the place.

POLITICAL NOTES.

Saturday, November 28.

The *Jiji Shimpō* gives considerable prominence to an opinion formulated by a Japanese admiral. What this officer says, in brief, is that a collision between Russia and Japan is inevitable sooner or later. The Great Northern Power's designs can not be mistaken. It has steadily pursued its path in Eastern Asia, pressing forward unceasingly and unchecked to southern seas; a path that has involved the absorption of Manchuria and has already brought Russia to the northern frontier of Korea. During the course of the programme there have been incidents tending to greatly accentuate Japan's traditional hostility towards Russia: such incidents as the forced retrocession of Liaotung and the haughty indifference shown by Russia in the matter of her evacuation pledges. Her expansion, if it proceeds unchecked along the paths it is now taking, will mean the placing of fatal obstacles in the path of Japan's natural growth and her ultimate relegation to a place of insignificance if not of dependence. Even supposing that the present complication be temporarily patched up, it is certain to arise again in even a more complicated form a few years hence. Russia is plainly preparing for that resurrection of trouble. Her present naval strength in these waters is 180,000 tons. Next July it will be 210,000 tons, and in December of 1904 it will be 240,000 tons, or 60,000 tons more than Japan's aggregate. When her preponderance of strength is thus clearly marked, can there be any doubt about the nature of the position Russia will assume, seeing that even now she practices her aggressions with unconcealed audacity? Japan has to choose, then, between at once trying conclusions ultimately inevitable, or engaging in a competition of armaments' expansion which, even were her financial resources adequate to the task, must be virtually interminable, and might at any moment prove insufficient owing to unforeseeable accidents. As to the relative strengths of Russia and Japan in Far-Eastern waters at present, the Admiral does not attempt any accurate analysis, but he gives it as his expert opinion that the advantage is with Japan at many points, and that if the word of command went forth to-morrow, there are multitudes of Japanese who would gladly die for their country. Times and seasons are vitally important in belligerent operations. If Japan does not fight now when things are in her favour, she will have to fight by-and-by at a serious disadvantage.

This is precisely one of the utterances that will grow more frequent and more influential the longer the situation remains unsettled. For some time we have apprehended that public opinion might escape the control of the peace-seekers. Things have not reached that stage yet, perhaps, but when Japanese Admirals speak in the above sense, and when their voices are conveyed to the nation by journals like the *Jiji Shimpō*, it is time to grow seriously uneasy. How Russia's procrastination is to be construed we do not undertake to say. But if war breaks out, the whole responsibility will rest on her shoulders. Probably in the history of the world there has never yet been an occasion when intelligent public opinion was so fully enlisted on behalf of one of two disputants.

There are various movements in the political world. So far as we can see they are confined thus far to what may be called the frayed-off fringes of the various parties,

in which circles there is a natural disposition to organize new associations so as to impart the strength of solidarity to these disgruntled fragments. Such essays on the eve of the opening of the Diet are familiar. The only project that attracts serious attention is for a coalition of the *Seiyū-Kai* and the Progressists. We doubt whether the time has come for such a fusion.

Monday, November 30.

It would seem that a real movement is on foot for an amalgamation of the *Seiyū-kai* and the Progressists. According to Tokyo journals Mr. Kato Takaaki has taken a prominent part in bringing the two parties together. There was a meeting yesterday at the Hoshigaoka between leading men of the two associations, and it is expected that this will be followed by a conference between Marquis Saionji and Count Okuma at the house of Mr. Kato. Marquis Ito, of course, is a consenting party to all these arrangements, but before any conclusive step can be taken a preliminary understanding must be arrived at with regard to the attitude which the union shall take towards foreign politics and with regard to the election of a President of the Lower House. Concerning the former problem there is a rumour that Count Okuma has expressed a conviction of the certainty of consensus, but it is not easy to see how men like Messrs. Oishi and Inukai could contrive to take such a sharp turn as would be necessary to bring them into the same path with Marquis Saionji, for the contrast between the latter's moderate and statesmanlike utterances and the former's wholesale denunciations is very flagrant. The *Nichi Nichi Shimbun* predicts that amalgamation would involve a reduction of the numbers of the *Seiyū-kai* to about 100, if not 80, and a reduction of the Progressists to about 60, so that the united parties would not command a majority of the whole House. That is perhaps a somewhat exaggerated conjecture. The *Dempo Shimbun* affirms that this union precludes the final battle between the Yamagata section and the Ito section, a prediction based, we imagine, upon the wishes of that journal. The whole business appears to be still in a more or less chaotic condition, yet we can not doubt that amalgamation has entered the field of practical politics. Those behind the scenes foretell that the united parties would oppose the Government's tobacco-monopoly scheme, the reduction in the number of prefectures, and the action taken in granting appropriations for the compilation of text-books and for the works in Kelung harbour, in spite of the Diet's disapproval.

Meanwhile, outside the ranks of the two great parties, there is an active movement for the formation of a new association. Several prominent men figure in connexion with this project—Mr. Ozaki Yukio, Mr. Hayashi Yujo, Viscount Watanabe, Count Itagaki and so on—but as to their exact relations we confess ourselves perplexed. There are certainly now wandering in the wilderness a sufficient number of politicians to form a respectable party.

Among the various reasons assigned for Russia's continued tenure of Manchuria, the most remarkable is the latest which comes from London via the *Jiji Shimpō's* correspondence. It is to the effect that Russia having discovered—the process of discovery is not explained—that after the withdrawal of her forces the Chinese troops would gradually fall into a state of inefficiency, has

decided that re-occupation of places already evacuated must be undertaken.

The only interesting point about this delightfully flimsy pretext is the suggestion it embodies that the fighting party may be getting the ascendant in St. Petersburg. It appears to be tolerably certain that counsels are much divided in the Russian capital at present. The Emperor has not yet returned, and His Majesty's habitual difficulty in formulating a decision on his own authority seems to be accentuated by grief and suspense in view of the condition of the Tzarina. Meanwhile great divergence of opinion is said to prevail. Possibly the Tsar's presence might turn the scale towards a pacific issue, but for the moment it is reported that there is much clashing of views.

Mr. Oishi Masami being a prominent member of the Progressist Party, his public utterances are not to be lightly treated. Ever since he returned from a trip through China and Korea, he has been proclaiming from platform after platform a "strong foreign policy," and we can not suppose that his harangues fall on uniformly deaf ears. His latest speech was delivered at a meeting of the Oriental Society (*Toho Kyokai*) on the 27th instant. It is said to have lasted three hours, and from the much abbreviated newspaper reports we gather that he repeated all his old arguments in favour of showing a bold, if not a belligerent, front to Russia. The interest of his lecture consists in the fact that, by way of peroration, he categorically indicated the steps which, in his opinion, should be considered essential by his country. A summary of his argument would be that Japan should abandon the theoretical policy of countries like England and America, and should take for model the practical activity of Russia and Germany. To that end she should first require the opening of Harbin, Mukden, Tatung-kou, Antung and Kirin. Secondly, she should insist on receiving a concession for a railway from Yin-kou to Wiju. Thirdly, she should have Russia's railway guards withdrawn and replaced by Chinese police. Fourthly, she should require that all railway and mining enterprises should either be undertaken by China herself or should be entrusted to syndicates of mixed nationalities. Fifthly, she should insist that Russia abandon her military preparations at Port Arthur and Dalny. Sixthly, the opening of Wiju, Yong An-pho and Un-Kwi should be at once effected. Seventhly, troops should be sent by Japan to the northern frontier of Korea. There were other suggestions not immediately bearing on the present crisis, but what we have quoted suffice to indicate how comprehensive is the ambition of Mr. Oishi, and what a bomb would be thrown into the international camp did he happen to become the holder of the portfolio of foreign affairs, and did he, in a responsible position, maintain the views advanced by him as a free lance. It is a matter for interesting conjecture how far Mr. Oishi reflects the views of the Party in which he is a leader. Political organizations in Japan seem helpless to impose any representative obligations on their members. At any rate war with Russia would be the immediate outcome of an attempt to enforce the programme he advocates.

Tuesday, December 1.

The Miyagi branch of the Progressist Party has just held a meeting and passed a resolution to the effect that the Far-Eastern policy of the Japanese Ministry is invert-

brate and injurious to the permanent interests of the country.

The working committee of the *Tai-Ro Doshi-Kai* has presented to the Prime Minister a document declaring that the time has come for ceasing negotiations with Russia and for adopting an independent line. In this document it is stated that whereas Japan presented certain proposals to Russia at the end of October, a month has elapsed without any reply being made by that Power, from which fact it must be inferred that the Russian Government has no sincere desire for peaceful negotiations, and that to continue crediting her with such a desire is merely to invite discomfiture.

Representatives of the non-parliamentary members of the *Seiyun-kai* and the Progressists met on the 29th ultimo in the *Kairakuyen*, and adopted a resolution in the sense that the two parties should march hand in hand in the approaching session of the Diet. They did not, however, lay down any bases of combined action; a singular reversion of the natural order of procedure. We should expect to learn that they had in the first place agreed upon the principles they were bound to support or the measures they were required to oppose. Possibly they had already talked over these cardinal matters.

No information is yet published about the important meeting which was to have been held at Hoshigaoka on the 29th ultimo by leaders of the *Seiyun-kai* and of the Progressists. Possibly we may have some intelligence before going to press, but at the moment we can only record the growth of an impression that the agreement between the two parties will not extend beyond cooperation and can not possibly be carried so far as fusion.

Meanwhile it seems to be regarded as pretty certain that Mr. Kono Hironaka will be elected President of the House of Representatives. It does not seem to us so very long since Mr. Kono Hironaka had to serve a term of seven years' imprisonment as the leader of a plot to overthrow the Government by violent means. He was then serving as President of the Fukushima Local Assembly.

The plan of forming a new party out of men who have abandoned their allegiance to existing parties or have hitherto stood aloof from them, does not appear likely to be immediately carried out. At a meeting held for the purpose of considering the scheme on the 29th ultimo in the Maple Club, the prevailing opinion seems to have been that the time is not ripe for such a step.

As we go to press we learn that the Hoshigaoka meeting, alluded to above, did not take place; preparations were not complete.

Wednesday, December 2.

On the 30th ultimo the members of the Kwanto Section and of the Tokyo Section of the *Seiyun-kai* held a meeting in Tokyo. Viscount Akimoto having been nominated to be head of the Tokyo Section, the following resolutions were passed, but we can not clearly distinguish whether they were endorsed by the Tokyo Representatives or whether they had the approval of the Kwanto men only:—

1. That the Government must be required to give really practical effect to the principle of administrative and financial reform.
2. That the delay in settling the problem of foreign politics is injurious to the national interests, and that the Government must be made to effect a settlement at once.
3. That the duty devolves upon the Party of exerting all its force of combination to give effect to the above resolutions and to strengthen its own influence.

Marquis Saionji then delivered a speech the gist of which was that the Party should aim above all things at unity and discipline in its parliamentary proceedings. As to the line that should be taken the Marquis promised to give a clear enunciation on the 5th instant, when the Party holds a general meeting. He declared that no session since the opening of the Diet had been so fraught with momentous issues. In the forefront stood the Russian problem, but even though that were speedily solved, other dangers of a serious nature menaced the country. As to what these dangers are the Marquis appears to have been purposely vague, but we gather from his guarded utterances that he anticipates some attempt against the Constitution. At the same time he expressed an optimistic opinion that the days of the evil-doers were numbered, that the nation had awakened to their iniquities and that the dawn of a better era was in sight. Exactly what it all meant we are far from certain, but the speech exhibited the Marquis in a new light as an exponent of Gladstonian rhetoric. He appears to be by no means the imperturbable student and philosopher hitherto depicted by public opinion. He concluded his speech by a comforting assurance to his Party that if the wind of autumn had blown chillily in their faces of late, spring zephyrs were about to make their genial influence felt. If the flail could miss the ground at which it was aimed, then the Party's plans too might fail.

We observe that Mr. Hayashi Yuzo and his partisans have now received the name of *Go-yoto* (Government party). Considering that they left the ranks of the *Seiyun-kai* because they disapproved of the compromise with the Cabinet, one is perplexed to appreciate the justice of this new appellation. At all events they are represented as having decided to organize a party of their own.

The *Kokumin Shinbun*, which ranks with the *Jiji Shinpo* as a pre-eminently moderate newspaper, has a powerful article denouncing the interminable delay in coming to a settlement with Russia. Whatever had to be said, declares our contemporary, has been fully said; whatever had to be asked has been thoroughly asked and fully answered. Nothing now remains for either side except to formulate a manly decision. If Russia has appreciated the sincerity of Japan's purpose, well and good. But there is nothing to indicate that she has done so. Her proceedings suggest that in her eyes there exists no other country but herself for the purposes of her East-Asiatic programme. It is quite superfluous to address impatient counsels to the Japanese Government. The Japanese Government itself, must be as much astonished and as much perplexed by doubts of Russia's intentions as are the most vehement of the party politicians. It can not be questioned that officialdom is pressing the Great Northern Power to abandon its attitude of *insouciance*. Should that pressure fail of effect, there will be nothing for Japan except to take independently such action as may seem necessary in her own interests.

The *Asahi Shinbun* is equally vehement, but while fully recognising the representative character of the *Asahi*, we do not recognise that it is habitually bound by the sense of responsibility which pervades the utterances of the *Jiji* and the *Kokumin*. The *Asahi*, however, is now able to declare, and does declare, that it unites its voice with those of the *Jiji* and the *Kokumin* to demand a termination of this paralysing suspense. Of course we need scarcely insist on the significance of such concurrent utter-

ances on the part of the three leading journals of Japan. Something has to be done.

Thursday, December 3.

The non-parliamentary members of the *Seiyun-kai* held a general meeting in Tokyo on the 1st instant, and passed the following resolutions:—

Inasmuch as the Government's procedure with regard to the Russo-Japanese negotiations is considered by us to have gravely compromised the occasion, we propose to impeach the Government on this count in the approaching session of the Diet.

Inasmuch as we consider that the Government's financial and administrative reforms are absolutely at variance with pledges given by it, we declare ourselves plainly opposed to the ministry.

Inasmuch as the Government, by making subsequent appropriations from the reserves on account of items disallowed previously from Diet, has, in our opinion, violated the Constitution, we propose to hold it responsible.

On the same day the preparatory committee of the Progressists held a meeting to determine the programme which should be submitted to the Party at its general meeting on the 3rd instant. The following programme was adopted:—(1) That the nation is profoundly indignant at the procrastinating and undecided policy of the Government in its negotiations with Russia, by which policy opportunities have been sacrificed and Russia's arbitrariness has been increased, to the impairing of Japan's interests. (2) That whereas the Government pledged itself to the Diet to undertake thorough financial and administrative reforms, it has temporized with the matter and has refrained from all drastic steps. Therefore we declare ourselves convinced of the Government's incompetence to undertake this work. (3) That whereas for the appropriations for Kelung Harbour and the compilation of text books were disapproved by the Diet, provision for them was subsequently made by the Government, which we regard as a pernicious precedent and a distinct breach of the Constitution.

Some minor resolutions of a parochial character were framed, but they have little importance or interest compared with the above. It is impossible to avoid the conclusion that the non-parliamentary members of the *Seiyun-kai* are acting in combination with the Progressists. The identity of their platforms is conclusive.

The committee appointed by the *Seiyun-kai* to examine the Budget has decided that the Government's figures must be amended. Speaking broadly, the Budget proposes a total reduction of 4,917,000 *yen* in the branch of Ordinary Expenditures; the Committee suggests that this figure should be increased to 14,178,000 *yen*, the difference being 9,261,000 *yen*. Again, the Committee advises retrenchments amounting to 7,662,000 *yen* in Administrative expenses, 4,106,000 *yen* in Army expenses, 2,410,000 *yen* in Naval expenses and 1,498,000 *yen* in extraordinary expenses, a total of 15,678,000 *yen* under these headings, as compared with 13,177,000 *yen* proposed by the Government. Here, then, there is a difference of 2,501,000 *yen*; not a very marked discrepancy nor one by any means sufficient to jeopardise the Budget. But the difference of 9,261,000 *yen* in the column of Ordinary Expenditures is formidable. We can not yet explain the exact motive of these proposed retrenchments, but apparently it is a question of financial reform having for immediate object the sus-

pension or abandonment of all works not absolutely necessary, and the sale of as many Government undertakings as possible to private individuals. This is a radical question which may involve an irreconcilable divergence of views.

Friday, December 4.

The *Asahi Shimbun* and the *Chuo Shimbun* agree in stating that Japan has invited Russia to accelerate her reply to the proposals placed before her more than a month ago. The illness of the Tsarina—who happily is now convalescent—naturally distracted the Tsar's attention, and was at any rate an explanation which a friendly Power could not brush aside. But the Japanese have not failed to observe that while her Majesty's sufferings constituted a reason for putting aside the Far-Eastern problem, they did not in any way check the progress of the negotiations about the Balkan Peninsula, and though that difference is not incapable of being explained, it is difficult to perceive any adequate synchronism between the beginning of Russia's apparent *insouciance* and the first symptoms of the Tsarina's illness. At any rate the Japanese Government can not ignore, and would be most culpable if it ignored, the strong resentment animating its nationals on account of Russia's delays. If the hands that curb Japan's natural impatience are to continue in the exercise of their prudent function, some settlement must be quickly effected. It is Russia's duty to consider these things just as much as it is the necessity of Japanese statesmen not to overlook them. If St. Petersburg delays much longer there can be only one verdict, namely, that Russia, by a show of placid indifference, has deliberately goaded Japan beyond all the limits of human endurance.

The *Nichi Nichi Shimbun* has a singularly quiet article, the gist of which is that the statesmen of the two empires are doing their best to find a satisfactory settlement; that outsiders are merely wasting words when they cry out about delay, and that the sentiment of the St. Petersburg Government is not to be judged by the acts of the man at the front. We have much respect for the *Nichi Nichi Shimbun* and we have greatly admired its demeanour throughout this crisis. But we can not find that such an article as its latest is in touch with the time. There is such a thing as over-calm counsels. When men's pulses are beating fast the still small voice is not easily audible. It seems to us as certain as anything can be certain that if Russia continues her apparent neglect of the Far-Eastern problem, diplomacy will lose its grasp of the situation.

There is a vast contrast between the *Nichi Nichi*'s writing and that of the *Dempo Shimbun*, which latter more nearly, we think, represents the temper of the nation. The *Dempo Shimbun* figuratively throws its hat into the air over the news that Russia is despatching the greater part of her fleet to Eastern waters. That means war, it thinks, and since peace with honour seems to be hopeless, let us have war by all means. What is the use of poising a slender pinnacle of peace on an edifice of unsubstantial conventions, treaties and pledges. In the very face of China's engagement to open Mukden to foreign trade, and in the very face of St. Petersburg's declared acquiescence, Russia takes military possession of Mukden. That is a fair measure of the respect she will show for any international engagement that does not suit her convenience. Let us have done with such shilly-shallying. And so on. There is no need to quote further.

The *Dempo Shimbun* having talked itself into a fighting mood, breathes battle from fiery lungs. We suspect that its voice is only one note in a big diapason.

Reuter's statement that Russia is negotiating for the two warships recently built in England to order of the Government of Chili, has evoked some comment in Japan. The impression conveyed by newspaper writing in Tokyo is that the rumour of Russia's doings has been deliberately circulated by Chili in order to excite Japan to buy the vessels at a high price. It is a fact, we believe, that the two iron-clads were offered to Japan several months ago, and that the offer was subsequently repeated on a financial basis which would have proved very convenient to the Treasury. But although the ships themselves are of the best type, they have a special armament, and thus their inclusion in Japan's navy would destroy the latter's homogeneity, which, according to expert opinion, is a feature of the highest importance. We are not sure that no other consideration influenced the Japanese Admiralty. One of our Tokyo contemporaries alleges that a question of terms alone stood in the way of a bargain being completed. But our own belief is that the question of homogeneity was chiefly taken into account. There is nothing to be said against the armament of the ships *qua* armaments, but they are not of the type used in either the Japanese or the British navy. The same objection ought to apply in Russia's case, but as Russia has almost denuded herself of a fleet in European waters, it is conceivable that she should be willing to waive many points of convenience for the purpose of correcting that deficiency. Still it is a fact that news of her essay to buy the two vessels reached Tokyo quite three weeks earlier than Reuter's telegram, and it thus becomes necessary to conclude either that Reuter's information is remarkably belated or that Russia has been hesitating over a transaction which, if she saw any real occasion for it, ought to have been concluded with all haste. As to the idea that she is now impelled by a panicky apprehension that Japan may step in and get the ships, unless anticipated, we regard it as persiflage. Russia must know well that Japan could have had the vessels long ago if she wanted them. One thing is plain, Japan knows her own mind and is not to be hustled into any course that her mature judgment does not approve.

It is scarcely possible to avoid a suspicion that a deliberate attempt is being made to deceive Europe and America with regard to Russia's procedure in the Far-Eastern complication. Berlin and Paris are both busily engaged circulating information which plainly suggests that Russia is negotiating with Japan, and negotiating in an amicable spirit. But Russia is not negotiating. She is sitting idle. She maintains towards Japan's proposals an attitude which strongly resembles contempt. It is true that Count Lamsdorff is credited with having spoken in a very optimistic tone at a recent meeting of diplomats. Immediately previous to that utterance, however, he was reported, on apparently good authority, to have declared that Russia had rejected Japan's proposals. Naturally those that have some knowledge of what is going on are perplexed to know exactly what Count Lamsdorff really means. A few days ago, the Emperor of Russia was said to be unable to attend to business on account of anxiety caused by the Tsarina's illness. None could go behind such a reason.

No course offered except to sympathise with His Majesty's grief. But happily the cause of anxiety is past. Perhaps, then, the Tsar, returning to business, has given a clear indication of pacific intentions, and perhaps Berlin and Paris are correctly reflecting that indication. Strange, though, that nothing is known of it by Japan, who is chiefly concerned. Can it be that Europe and America are being quieted by empty assurances, while Russia is completing preparations which will convert her from a negotiator into a dictator? We do not like to suggest evil motives but there are certainly materials for suspicion.

The various committees of the Progressive Party held a meeting on the 2nd instant. About 60 members were present, and they unanimously agreed upon a resolution to be submitted to the general meeting on the 3rd. The preamble of the Resolution ran thus:—

That the present Cabinet has repeatedly lost opportunities in the field of foreign politics, thereby rendering the situation in the Far East daily more perilous and bringing the Empire to the verge of unprecedented dishonour; that unless steps be immediately taken to save the situation, it is impossible to foresee what misfortunes may fall upon the State; that the present Cabinet pledged itself to reform the administration and reduce the State's expenditures, but has failed to remove the defunct set of officialdom or to correct the confusion of the finances, the Ministry's efforts having been confined to mere temporary and superficial measures.

Therefore our party adopts the following Resolutions and will labour earnestly to give effect to them:—

1. That in order to preserve the peace of the Far East, Russia must be required to withdraw from Manchuria, and that, simultaneously, the principal places in Manchuria must be opened to foreign trade, while, further, Japanese enterprises in China and Korea must be carried to completion.
2. That in order to reform the government of the country, the organization of the administration must be corrected and the various sections brought into unanimity, thereby restoring official discipline and improving the financial position.

These resolutions were passed by the general meeting of the Party on the following day. A member from Awamori attempted to carry an amendment calling for the resignation of the Cabinet, but it was rejected on the ground that the Party had no power to give effect to such a resolve, and that the best plan was to confine themselves to generalities within the limits of which they might march in unison with other parties.

On the 2nd instant the Council of the *Seiyun-kai* held a meeting to draw up a programme for presentation to the general meeting of the Party on the 3rd instant. The most important of the resolutions adopted was:—

That with regard to the situation in foreign affairs and for the purpose of preserving the peace of the Far East, Russia be invited to reflect with a view to a speedy settlement, thereby securing and extending the interests of this empire.

The second resolution was a guarded reference to the problem of administrative and financial reforms, and the third resolution invited the Government to carry out their reforms at once, as well as to abandon all works involving increased expenditures. The comparatively moderate nature of these resolutions will be noticed.

On the 3rd a general meeting was held and the above resolution was adopted unanimously.

A telegram from Matsumoto states that T. Uyemura, a farmer living on the village of Ochi-ai, Suwa, murdered a woman on Dec. 2nd. The culprit was arrested at the scene. Jealousy is reported to be the cause.

CHINA.

Saturday, November 28.

With regard to the collision reported to have taken place between Chinese and Russian soldiers at Sin-min-tung, it is now stated that the cause was an attempt on the part of the Russians to compel the disbandment of the Chinese. The former, so the story runs, had attempted to employ the handits and the Chinese soldiers for their own purposes, but being unable to accomplish that end, they changed their policy and insisted that the soldiers should be disbanded, which demand precipitated a collision. We re-produce this report for what it may be worth. Evidently it comes from a Chinese source, but there is nothing improbable in the details.

Russia having already obtained a concession for the building of a line from Chinting to Taiyuen, is said to have now applied for permission to extend it from the latter town to Lanchow in Kansu. Chinting lies south-west of Peking and is the point whence the Peking-Paoing road branches southward to Hankow and westward to Taiyuen. The continuance of the latter line to Lanchow in Kansu by a Russian company would be distinctly significant. Lanchow lies near the Great Wall at the point where the Yellow River makes its huge northern loop. A road thence to Peking would bring Mongolia into railway communication with the Chinese capital and would render Peking accessible from a westerly direction as it is already from an eastern, namely, by the East-China and Newchang-Shanghai-Kwan roads. It must be confessed that Russia is conducting her empire-building enterprises on a colossal scale. The world knows now what kind of instruments railways become in her hands. She has already gained possession of the cradle of the Tartar dynasty, Manchuria, and it looks very much as though ambition prompted her to a similar acquisition of the cradle of the Chinese race, the provinces lying northward of the Yellow River. Rumour assigns to the Chinese Court renewed projects of removing the capital to Hsian in Shensi, but Hsian would soon cease to be a safe retreat were Russia's "sphere" extended to the regions indicated by her latest move.

Monday, November 30.

Reports from Manchuria—reaching the *Nichi Nichi Shinbun* via Peking—show that the Russians are busily making arrangements for going into winter quarters. No sufficient provision exists for such a purpose, and in abandoning the tents and temporary barracks hitherto employed, the troops have to avail themselves of official buildings and private houses on a large scale. Great sufferings are thus inflicted on the inhabitants, and it is said that widespread discontent prevails. That is a phase of the situation which has long been anticipated. Even supposing that Russia has only a hundred thousand men of all arms in Manchuria, the difficulty of providing adequate shelter for them throughout a winter of proverbial severity and several months' duration must be immense. It is supplemented also by the difficulty of victualling them. When the snow lies feet deep, as it does in Manchuria, the transport of provisions for thousands of men is a formidable task. Japan achieved it, however, in the campaign of 1894-5, but in her case there were two important points of difference: one was that she had an immense band of coolies trained to such work; the other that her troops were not scattered about the country

but concentrated at two or three points. We presume that the Russians have made due arrangements for transport purposes, but whatever they have done the troops will have a hard time and the inhabitants of Manchuria a harder. As for the bill that will be run up by all this, it must look serious even to Russia, whose outpouring of treasure in pursuit of her Far-Eastern ambition has assumed stupendous dimensions. However, the die may be said to have now been cast. It is too late to attempt the removal of any considerable part of her Manchurian garrison before the snows commence. Had she shown a little more expedition in dealing with Japan, the situation might be different, but if St. Petersburg chooses to pay tens of millions of roubles for the luxury of practising *insouciance*, that is St. Petersburg's look-out.

It has been amusing to observe the reception given in some quarters to our comment that the alleged south-ward movement of Russia's forces in Manchuria might be connected with going into winter quarters. The least attempt to read Russia's doings by an ordinary, rational light is denounced by some of our contemporaries as shuffling, or as hypocrisy, or as something else equally nasty. Apparently the only mien approved by these critics is one of indiscriminating clamour. It has been said of Gibbon that he never could attribute any human action to a good motive were an evil motive conceivable. There are many imitators of Gibbon where Russia is concerned.

General Ma is reported to have just had audience with the Empress-Dowager, and to have informed Her Majesty that in the event of war between Japan and Russia, he desired to lead his forces to the assistance of the Japanese. There is no information as to the reply of the Empress Dowager.

Many considerations are connected with this question of China's attitude in the event of trouble; so many that to discuss them in a paragraph is out of the question. But one reflection forces itself upon our attention. It is that thoughtful Chinese must be perplexed about a civilization which relies solely on the weapons of mediæval times. China's trouble is that she long ago abandoned the sword as a means of settling international disputes, and consequently she is not now ready to draw it. The units of her people can fight valorously and ably as they have often proved, but a perennial prejudice against the profession of arms has deterred men of education from espousing a military career, and the spirit of fighting seems to have died out. It is that spirit that our refined civilization is bent upon resuscitating. We rely in these times chiefly, if not entirely, upon brute force, and the propagandists of our morality are endeavouring to win China to the same creed. The crowning charm of the thing is that she is denounced as bigotted, degenerate and uncivilized because she hesitates to adopt the fighting doctrine.

It is stated on apparently good authority—we quote the *Asahi Shinbun*—that according to a telegram from Commander-in-chief Tso to the Foreign Office in Peking, the Russians in Mukden have demanded the surrender of all official buildings and stores. Tso seems to have applied for re-inforcements, but for what purpose he would employ them there is no suggestion. The Russians evidently have come to Mukden to stay. Their retirement from the place after China had acceded to such of their demands as could be insisted on without

extravagance, would have constituted a proof that some reliance might be placed on the protestations they have frequently made in public. But it would seem that there is not to be a saving clause. The fact is that the peace-party has been pledging the country before the world and the man at the front has been engaged smashing the pledges.

The *Fiji Shimpō's* Tientsin correspondent reports that when Viceroy Yuan returned Major-General Wogack's recent visit, the conversation turned upon the evacuation of Manchuria, concerning which the Russian officer said that it would be altogether unreasonable to expect Russia to relinquish her hold of a territory where she had spent many hundreds of millions of roubles. Thereupon the Viceroy replied that possibly a third Power might not view the retention of the place with inactive complacency. "You mean Japan, of course," answered Major-General Wogack. "A poor little country like Japan does not count for anything in Russia's eyes. My country would crush it at one onset."

That is a pleasant utterance of the Major-General's. It has an agreeable savour of pacific sentiment, derived perhaps from the media through which the story passed *en route* to the public ear, but none the less likely to gratify the Japanese. We suspect that Major-General Wogack is a typical man at the front, though we make due allowance for the usual process of exaggeration his words have doubtless undergone.

We have heard it said by highly responsible Japanese statesmen that precisely the reason alleged by the Major-General makes it hopeless to expect Russia's withdrawal from Manchuria: she has spent so much money there that to give up the place would be an intolerable loss. Practically such a contention has manifest value, but what a farcical example of morality it is! Sink your money in the territory of another State and you immediately acquire a title to the possession of that territory! We Westerners who gravely admit the justice of this plea are conspicuous for our denunciation of the so-called robbery practised by Chinese officials, the while there is performed under our approving eyes a monster theft which throws into deepest shadow all the larcenies of all Oriental officials combined.

Wednesday, December 2.

The chief of the Chinese officers who attended the autumn manoeuvres in Japan is said to have presented a report to the Court in Peking, referring in warm terms to the diligence shown by the Emperor and Empress of Japan in promoting all useful undertakings, to the remarkable proficiency of the troops, and to the patriotism and general goodness of the people.

Going the round of the newspapers there is a story that Viceroy Alexieff has taken some one into his confidence on the subject of docking facilities, and has explained that in the event of war with Japan the Russian Squadron, unless it could completely destroy the enemy's ships at the first encounter, would thereafter be crippled owing to the difficulty of effecting repairs. There is nothing new in such a view. The fact has long been familiar to onlookers. It is one of Russia's weak points—a natural disadvantage which must long exist. Another difficulty is that of coal. Experts say that the supply now immediately available for Russan vessels would not suffice for more than the initial stages of a campaign. Some 25 ships are on their way from England loaded with

that prime essential, and others will doubtless follow, but if the war lasted for any length of time, Russia would be greatly crippled in this respect. Saigon might help her, but Saigon is not immediately accessible and there are limits to the benevolence that French neutrality might assume.

In connexion with this it may be mentioned that even though English ports between Europe and the East were closed to belligerent vessels for coaling purposes, Russian men-of-war could make their way to this part of the Pacific *via* the Strait of Sunda and Saigon, supposing that Holland and France were disposed to ignore the principles of international law.

Thursday, December 3.

The *Nichi Nichi Shinbun* has a telegram from Peking dated the 1st instant, saying that Viceroy Alexieff was to start from Port Arthur for St. Petersburg on the 2nd instant, and that Major-General Wogack had left Tientsin in time to bear the Viceroy company on his homeward voyage. Advices from London at the close of October show that on the continent of Europe Viceroy Alexieff and General Kuropatkin were then believed to be the leaders of the war party, whereas the Tsar's influence was thrown entirely into the opposite scale. The return of Alexieff, then, may mean one of two things: it may mean that his policy is discredited, or it may mean that he is to be personally consulted before any decision is taken. We can scarcely credit the former interpretation, desirous as we are of doing so; and we dare not credit the latter, since it involves two grave dangers, namely, either that the Viceroy's presence in St. Petersburg may turn the scale in favour of war, or that the delay pending his arrival may prove intolerable to Japan, whose patience is already worn well nigh threadbare.

It is stated that, at the close of November, the Russian garrison of Mukden received an increase of a thousand men. How extremely difficult it is becoming to accept the pretext originally advanced for the re-occupation of this city! Taotai Chang, who succeeds Taotai Yuan at Antung, is now on his way from Peking to Mukden. If the Antung incident has been settled so thoroughly as to warrant Russia's acquiescence in China's appointment of a successor to Yuan, what has Russia still to do in Mukden? It would be most convenient if telegraphs and all other rapid means of disseminating news could be quietly suspended while this Manchurian pageant is in progress. Otherwise the world's vision is not unlikely to be injured by all the dust that is being thrown into it.

It is stated on the authority of the Japanese Consul in Antwerp that for the purpose of expediting the survey and laying of the Yei-Han Railway, now in course of construction, the King of Belgium, at the close of October, directed Lieut. Pontas (?) and five other special commissioners, to set out from Genoa for China in the beginning of November.

Friday, December 4.

The news is confirmed that Viceroy Alexieff, accompanied by Major-General Wogack, was to leave Port Arthur for St. Petersburg on the 2nd instant.

It is stated from Peking that Major-General Wogack has been repeating in that city the insulting remarks addressed by him to Viceroy Yuan in Tientsin. He is reported to have told a high official of the Wai-wa-

pu that Japan has no intention whatever of fighting: that did such a petty Power enter the lists against Russia it would be a case of the mantis attacking the war-chariot; that if China placed any reliance on her little neighbour she would be committing the grossest possible blunder, and that the only wise course for the Government of the Middle Kingdom is to come to terms at once with Russia.

War being Major-General Wogack's *metier*, his seemingly deliberate attempts to stir it up are not, perhaps, so wonderful. There are unhappily men in the world who, for the sake of personal ambition, make small account of any sufferings inflicted on others. Unhappily, also, nothing subjects human patience to a severer strain than to be openly accused of cowardice, as this Russian officer appears to be making it his business to accuse Japan. It is certainly a pity that Major-General Wogack, supposing him to be such a person as the utterances recently attributed to him indicate—it is certainly a pity that he should be in intimate relations with Viceroy Alexieff. What interests us mainly in his allegations is the gross ignorance they betray of Japan. Major-General Wogack knows so little of this country that he can actually persuade himself of her reluctance to fight because Russia is big and has nominally the strength of bigness. That is a colossal blunder. Major-General Wogack has been in Japan. He spent quite a considerable time in Japan, and unless he deliberately closed his eyes to all opportunities of learning, he should have acquired at least a rudimentary acquaintance with the disposition of the Japanese. Did he altogether fail to look about him? Frankly we do not believe it. What is more, if he said the things attributed to him, we do not believe that he believed them. And it is to be hoped that the Japanese will not regard him as a typical Russian. The Russians are too brave a people to wantonly insult a nation which they have greatly injured and which, in the face of a long series of provocations, has shown patience representing the highest kind of courage. We have not the least doubt that even the average Russian soldier, and certainly, all Russian gentlemen, would denounce as strongly as we do such utterances as those attributed to Major-General Wogack.

The *Fiji* has a telegram from Peking saying that Reuter's telegram as to peace on the basis of an exchange between Manchuria and Korea, is credited widely in that city, and that Viceroy Alexieff's departure for St. Petersburg is regarded as evidence that the draft of a convention has been agreed upon.

Taotai Chang, who is to succeed Taotai Yuan, at Feng-hwang-cheng, seems to have done everything possible to avoid an office so pregnant with trouble. His reluctance was overcome, however, and he is now on his way to his new post. Rumour attributes to him a character as strong as that of Yuan, and says that he will not consent to be a creature of Russia's. It is of small moment whether he does or does not consent, so far as the fate of Manchuria is concerned. If he attempt to kick against the pricks, he will be sent back to Peking, that is all.

R. Tamura, manager of the Miyazaki-Shoten, silk goods exporters, Ota-machi, Yokohama, was arrested on Dec. 2nd and removed to the Court for preliminary examination. He is said to have embezzled *yen* 2,200 belonging to the firm whose head office is at Kyoto. The Yokohama branch was opened in July this year.

KOREA.

Monday, November 30.

The *Kokumin Shinbun* publishes news from its Seoul correspondent to the effect that Korea is about to lay the foundations of a navy with Russian assistance. What our contemporary relates is that on the occasion of his recent visit to Seoul M. Waeber concluded with Li Keun-thaik an arrangement in the sense that Korea should purchase a cruiser from Russia for 400,000 *yen*; that 5 Russian officers should be lent to organize the Korean Navy, and that a naval college should be established where the Russians would act as instructors. It is added that M. Waeber having effected the necessary steps to carry out that programme, M. Pavlow has been instructed to obtain Korea's ratification, and for that purpose has addressed himself to the Emperor, who, in turn, has issued the necessary instructions.

What makes this news difficult to credit is that the action attributed to Russian diplomats would be in plain opposition to the Russo-Japanese Conventions. The Convention of 1896 says:—"The Japanese and Russian Governments will endeavour to abandon to Korea, as far as the financial and economic situation of the country will permit, the creation and maintenance of an armed force and of native police in proportions sufficient to preserve internal order, without foreign aid." And the Convention of 1898 supplements this by saying:—"The Imperial Governments of Japan and Russia mutually engage, in case Korea should have recourse to the counsel and assistance whether of Japan or of Russia, not to take any measure as to the nomination of military instructors and financial advisers without having previously arrived at a mutual agreement on the subject."

It is agreeable when some little oasis presents itself in the desert of Korea's political turmoil. We read in the *Fiji*'s correspondence that Li Yong-ik, having received medical treatment for several months in the Japanese Hospital at Seoul, and having now completely recovered, has presented a sum of 1,500 *yen* to the funds of the Hospital and has given gold watches and other *souvenirs* to the nurses and physicians. Li Yong-ik is the politician who used to be regarded as the head and front of the pro-Russian party, but so far as we can see, rivalry with Li Keun-thaik is the mainspring of all his acts. Either of these two men seems ready to espouse the cause of whatever Power is most likely to further his individual aims.

There appears to be a dispute about concessions for mining smokeless coal at Pyong-yang. The former Governor of the place, Min Yong-chhol, granted the sole right to an American syndicate, but Li Yong-ik, Chief of the Imperial Estates Bureau, gave a concession in the same district to a French syndicate, and has been attempting to compel the Americans to withdraw.

Tuesday, December 1.

A long telegram to the *Fiji Shimpō* from its special correspondent in Korea indicates that the Russians are very busy. They appear to be making Tung-fa a centre of lumber industry and also to be organizing sericultural enterprise there. Tung-fa has always been noted for its production of *yamamay*. It is further stated that they are working to lay a line of telegraph between Yong Am-pho and Mi-reuk-tung.

and that they are endeavouring to make arrangements for building a railway from Seoul to Yong Am-pho. The same correspondent states that, in view of Yong Am-pho becoming an open port, a certain Chinaman purchased 200,000 *tsubo* of land in the neighbourhood, and marked his acquisition with posts which, however, the Russians removed, imagining that the Chinaman had some Japanese connexions. After removing the posts, they mounted an old cannon at the place.

Possibly these statements have to be discounted. Indeed they are avowedly based on rumours in some cases at any rate. But there is no mistaking the activity of the Russians in northern Korea, and no misinterpreting their intention to establish a firm footing there. If it be true that the mere suspicion of collusion with Japanese subjects induced them to remove the land-marks of a Chinese purchaser, their action assumes a sinister aspect. But had the Chinaman any right to acquire land? As good a right as the Russians, perhaps, and yet, perhaps, no right at all.

It is stated that the provisions stored by the Russians at Feng-hwang-cheng will barely suffice for the winter. Yet, in the same breath, we are told that they are about to increase the force there from 23 to 28 officers, and from 200 to 2,000 men. These are singular proportions. Somebody must be speaking off the book.

Russia is said to have objected to the new Taotai whom China nominated to replace the offender Yuan. It is suggested that the new nominee, being an adherent of Viceroy Yuan, is objectionable, but that at any rate Russia does not want to be troubled with Taotais in the region of Antung.

Rumour says that the French Representative in Seoul is busying himself about the port that the Korean Government has agreed to grant a concession to a third owner for the construction of a line of railway from Seoul to Wiju. The Representative is stated to have directed Korea's attention to the fact that, in 1899, she promised to employ French materials and French port assistance in building the line. He asks for a clear statement of Korea's intentions.

Wednesday, December 2.

The Korean Emperor seems to be emerging from the partial retirement maintained some time. He was to give audience to

Representatives of Japan, the United States and Great Britain on the 30th ultimo. Opinion prevailed that His Majesty would hear a great deal about Yong Am-pho that day.

he *Nichi Nichi's* Seoul correspondent that the question of the Chemulpo riot is to end without further discussion. At a time there was much communication between the Legations of Japan and Russia, the latter Power seems now reluctantly to let the matter rest.

There is confirmation of the report that the Russians in Seoul are endeavouring to secure the purchase of a Russian man-of-war by the Korean Government. The vessel, however, seems to have been shorn of final dimensions, and we no longer find it actively concerned.

Nichi Nichi's correspondent repeats that the French Representative is busying himself about the Seoul railway. In our last issue we stated of this matter, as reported from the capital. These have now to be added by the information that the French Representative is referred to by the French Re-

presentative—namely, the engagement that the Korean Government itself would build the line and that it would employ French experts and French materials—appears to rest solely on a verbal promise given by Pak Che-shun, who held the portfolio of Foreign Affairs in 1899 when the French concessionaire surrendered his concession, having failed to procure capital for the work or to find a purchaser of the privilege. It remains to be seen whether the Government of Korea in 1903 will consider itself bound by a verbal promise extracted from one of its officials in 1899. Such respect for mouth-pledges would be a refreshing oasis in the wilderness of deliberately violated agreements that now stretches over the whole of Manchuria and promises to invade Korea also.

It is stated that the French concessionaire who last year obtained a promise of mining privileges at Chhang-song in Pyong-an-do, has at length succeeded in getting his privilege practically recognised.

Thursday, December 3.

It is stated that a petition has been addressed to the Emperor of Korea urging that the surrender of the murderers of U Pom-song should be demanded of the Japanese Government with a view to their reward and promotion. The *Kokumin's* version of this affair, or perhaps of one incident of it, is that two Koreans, by name Min Yong-hwan and Min Yong-so, proceeded to the Japanese Legation in Seoul and presented a memorial praying that Ko and No, the assassins, be leniently treated. It is conceivable that Ko and No believed themselves to be actuated by truly patriotic motives, and that were their acts judged strictly and solely by the crooked code of morality governing their lives, they would deserve a niche in the temple of fame, a place beside Harmodius and Aristogeiton, instead of a felon's grave. Korea does not seem to have emerged by however little from the groove of mediaevalism in these matters. There are many Japanese still travelling in the same groove; many men who believe that if only they find in themselves a sentiment of willingness to sacrifice their own lives on behalf of a cause, that cause must be considered to have heaven's approval and any method of promoting it must be counted lawful. That a similar creed should prevail among some Koreans, therefore, would not be wonderful, though it must be noted, at the same time, that in Korea the impulse of the assassin has never been redeemed, so far as we know, by any of the attributes that impart a semblance of nobility to even the most ferocious of Japanese fanatics. Apart from the question of springs of action in individual cases, however, the strange and lamentable phase of Korea's career is that even her Court and her Government seem unable to emerge from the shadow of old times in this most signal respect, and that just as Kim Ok-kyun's corpse was carried in a Korean public vessel from Shanghai to Chemulpo, his murderer being an honoured passenger by the same steamer, and just as the remains, on reaching Seoul, were officially subjected to the foulest indignities, and the assassin raised to high office, so now it would appear that Korean officialdom is not unwilling to associate itself with the act of Ko and No, and to contrive their escape, if possible. It is not possible, however, Japanese justice, no longer recognising the plea of fanaticism, will pursue these murderers to the end, and their fate many perhaps prove a deterrent to other Koreans who have essayed, and are still essaying, to tread the same path.

Telegrams from Seoul show that on the occasion of Minister Hayashi's audience with the Emperor of Korea on the 30th of November, the Emperor explained that the question of opening Yong Am-pho had been entrusted to the Minister of Foreign Affairs and the port would doubtless be soon opened. In spite of this declaration, however, the consummation of His Majesty's promise is said to be liable to delay.

On the other hand, M. Pavlow, who was received in audience after Mr. Hayashi, is reported to have strongly opposed the opening of Yong Am-pho, and to have stated his reasons accurately.

It is impossible not to contrast this action of M. Pavlow's with some recent utterances of the *Novoe Vremya*. That journal informed the world that "Russia washed her hands in innocence;" that the principles of her policy continued to be "the maintenance of the independence and integrity of China and Korea and, in general, of the *status quo* in the Far East," and that her "sole desire was to open up for the commerce and civilization of foreign countries territories that have hitherto been inaccessible." We have sometimes doubted whether the history of nations offers any parallel for the recent sweeping aggressions of Russia in the face of solemn engagements to the contrary. But we are sure that the history of journalism offers no parallel for the flagrant contrast between facts and professions presented by the *Novoe Vremya's* utterances and the doings of Russia's soldiers and diplomatists in the Far East. This empire that merely wants to open up for the commerce and civilizations of foreign countries territories hitherto inaccessible, is represented in Seoul by an official who exerts all his influence, and resorts even to warlike menaces, for the purpose of preventing the opening of Yong Am-pho because, it has been arbitrarily chosen as a station by some Russian lumber-men.

The Representatives of the United States and Great Britain were to be received by the Emperor of Korea on the 1st instant. It is to be hoped that they raised their voices strenuously against the selfish policy of M. Pavlow.

THE NORTH-EASTERN FRONTIER OF KOREA.

There appears to be quite a complication on the banks of the Tumen. A collision between Chinese and Korean troops at Kyong-heung—the scene of Russia's telegraph-building essay some time ago—has already been reported, and the fact that two Chinese subjects were killed in the fray is known to our readers. News now comes that according to despatches from the local Authorities in that part of Hamyongdo, Chinese bandits (or Boxers) have been raiding the districts of Musan (where the timber-felling business began), Chyon-son and Hai-ryong. The local Authorities say that they have no adequate means of checking these incursions and that the people are suffering cruelly. But when representations were about to be made by the Seoul Government to the Chinese Minister, the latter forestalled them by preferring a complaint with reference to the killing of the two Chinese. There our information ends. There has always been a turbulent Chinese element in the districts on the east of the Tumen, and it is probable that their lawlessness is the prime cause of this latest complication.

RELATIVE STRENGTHS OF RUSSIA AND JAPAN.

The *Kokumin Shimbun* has an interesting article on the subject of the relative strengths of Japan and Russia. On the eve of the war with China, says our contemporary, the universal opinion of the nations, whether they sympathised with Japan or did not sympathise with her, whether they were hostile to her or were not hostile to her, was that China would win. Similarly the universal opinion to-day is that did war break out, Russia would win. One correspondent of an influential American journal who saw the recent manoeuvres in Liaotung, expressed astonishment at the force Russia could muster, and estimated her available troops in the Far East at 280,000 men. It is not pleasant, continues our contemporary, to be confronted with such opinions, but they do not dismay Japan. The people of this country know their own strength and it is because they derive confidence from the knowledge that they are able to preserve a calm demeanour. Perhaps it might be found in the day of trial that Russia suffered from some of the inherent weaknesses which contributed to the defeat of the Chinese. She has an immense inchoate territory, she has a huge heterogeneous population, she is suffering from disaffection among her people and from corruption in official circles. The world may be mistaken in its estimate of the two Powers. At all events Japan is prepared for the trial and does not shrink from it. Her policy is not one of supreme selfishness and absolute indifference to the interests of others. If she enter the lists, her arm will be strengthened by the force of a good cause.

It appears to us that the *Kokumin* is not quite accurate when it accuses all countries of having predicted Japan's defeat at China's hands. Germany was a signal exception. The German officers who had been in the service of Japan carried away with them an expert conception of the quality of Japanese soldiers and sailors, and the consequence was that German opinion inclined from the first to forecast victory for Japan. Needless to say that many of us living on the spot held a similar view. The writer of these words—if he may be permitted to relate a personal incident—received from an important London journal, just before the first shot was fired in Korean waters, a telegram inquiring the probable result of the conflict. His reply was:—"Japan will beat China wherever she finds her," and that reply shaped the views of the journal to which it was addressed. However, our point is that Germany showed herself exceptionally perspicacious on that occasion, and that the fact should not be lost sight of when the forecasts of the nations are discussed.

THE INSURANCE QUESTION.

An insurance expert writes as follows:—"If the reserves of the Meiji Life Insurance Company, after twenty years' existence be—as stated in the *Japan Mail*—only 2,600,000 *yen* on policies of the face value of 24 millions, it follows either that the reserves are insufficient or that they are calculated on a basis widely different from that adopted by foreign offices. The standard followed by the latter is from 3 to 3½ per cent. of the sum insured, and if the same standard were taken by the *Meiji*, an actuary would probably find that the reserves were altogether insufficient, and that if new business were to be discontinued a liquidation

of the old business with such reserves would be impracticable."

It appears to us that nothing definite can be said on this subject without an exact knowledge of the course of the Meiji's business. Had the latter grown steadily and equally year by year until its total reached 24 million, the reserves, on a 3-per cent. basis, should be now some 6 million *yen*. But the *Meiji* may have written very few policies in the course of the first fifteen years. Thus, if its business grew at the rate of 200,000 *yen* annually for the first 15 years, and then leaped to 4 millions annually, the reserves should now be between 3 and 4 million *yen* on a 3 per cent. basis, and evidently if the development followed some different course, the reserves would vary accordingly. We do not see, therefore, how anything conclusive can be formulated about the Meiji's reserves in the matter of sufficiency or insufficiency, but, on the other hand, we entertain no doubt that this figure given for the Meiji is considerably smaller than the corresponding figure carried in the books of any of the great foreign firms whose business has been prosperous from the outset and has grown at a steady rate.

With reference to this general question of insurance, we learn that the Japanese Government has agreed to receive the deposits over and above 100,000 *yen* largely in securities other than Japanese bonds. The exact proportions fixed are that the first 100,000 *yen* must be all in Japanese securities; the next 400,000 *yen* in Japanese and foreign securities in the ratio of 6 to 4; the next 500,000 *yen* in the ratio of 4 to 6; and all amounts over one million *yen* in the ratio of 2.5 of Japanese securities to 7.5 of foreign. As the main objection of the insurance companies was based on the necessity of investing large sums in Japanese bonds, this concession will doubtless remove much of the difficulty, especially if the depositors have full liberty to change the securities as financial prudence suggests.

THE CANTON RAILWAY.

A noteworthy event is the opening of the first section of the railway which the American China Development Co. have in hand to build between Canton and the large city of Samshui on the West River. It marks the coming into operation of the first railway in Southern China, that is in purely Chinese territory. This is a branch of the grand trunk line which is to run from Canton to Hankow and the construction of which is about to be begun by the same Company. Under their agreement with the Chinese Government the company have the power to issue 42,500,000 dollars' worth of fifty-year 5 per cent. gold bonds, the interest being guaranteed by the Chinese Government. Excellent progress has been made with the work. From Canton to Fatshan the distance is only 10½ miles, but by the middle of January it is expected that the entire branch line from Canton to Samshui, a distance of thirty miles, will be opened. We learn from a Hongkong paper that preparations are well advanced for the commencement of work on the grand trunk line at both ends. Out of Canton some 150 miles of the permanent way are located, and the work of construction begins at this end of the line probably in the course of the next fortnight. Including branches, there are approximately about 1,000 miles of railway to construct, and Mr. Willis E. Gray, the general manager and engineer-in-chief of the line, calculates that the work will progress

at the rate of 125 or 130 miles a year. The opening ceremony took place on Nov. 15th and the spectators included practically the foreign residents of Shameen and a considerable contingent from Hongkong. The first train consisted of a locomotive and improvised cars which carried some five hundred persons from Canton to Fatshan and back, after which a tiffin was given and speeches were made with reference to the occasion. Stress was laid by several speakers on the importance of the link between Canton and Kowloon, which the Chairman (Mr. Gray) remarked his British friends had been messing about for years. In the course of a short address that he was called on to give, the Hon. F. H. May told a rather neat story. "Some people," he remarked, "say that some of the happiest moments of our lives are those that we live in the pleasant recollections of the past. Now, that has not been my fortune. I have only been at one opening of a railway before the one in which we have taken part to-day. It was the opening of a railway in Ireland, in the county of Meath, and I was sitting in the carriage next the engine with a friend of mine when the train brought up. We sat for some moments and then, as it did not go on, I looked out of the window, and I saw the engine-driver inspecting his engine all over, and then I saw him climb up again into his place, and his stoker said to him, 'Mickie, what ails her at all?' 'I don't know, Pat,' said Mickie, 'what ails her; but I know this, I will drive her or 'bust' her.'—(Laughter.) And you may imagine my feelings when he put on full steam, and he did 'bust' her. Fortunately, the explosion was not a serious one, but I and the rest of the occupants of the train had to walk home.—(Laughter.)"

LATE REAR-ADMIRAL BEARDSLEE.

By the death of Rear-Admiral Lester Anthony Beardslee, U.S.N., a figure of historic importance is removed from the public view. He was born at Little Falls, New York, in 1836; entered the navy at the age of fourteen, and six years later graduated from the naval academy. He won promotion through the regular channels up to the Civil War. In 1853 the Perry expedition went to Japan. Beardslee was then a cadet on board the *Plymouth*. In 1863 as executive officer of the monitor *Nantuxet* he participated in the attack on the Confederate works at Charleston, and in October of the following year was on the United States warship *Wachusett* which chased the Confederate steamer *Florida* into the port of Bahia, Brazil. While the rebel vessel was under the protection of Brazil the Federal ship entered the bay, captured her and put a prize crew, commanded by Beardslee, aboard. The latter afterwards brought the prize to the United States. In 1870 Beardslee took the *Palos* to Alaska waters—that *Palos* which was sold to Japan not long ago in Nagasaki—and it is recorded that about the same year while in command of the cruiser *Jamesston* he discovered, surveyed and named Glacier Bay in Alaskan waters. But the deed which will be chiefly remembered in connection with the active part that he took in the promotion of the Perry Memorial Expedition to Uruga. He delivered what, next to Commodore Rodgers', was the speech of the day, and was one of the few survivors—if not, indeed, the self the last survivor—of the officers who were in the Perry Expedition he aroused the deepest interest on the part of the Japanese.

THE JAPANESE ARMY.

In its issue of Oct. 11th the St. Petersburg *Viedomosti* wrote contemptuously of the Japanese army. It said that the Japanese soldier had not much endurance and could not stand long marches or inclement weather. As for the cavalry, the *Viedomosti* considered it so bad as to be unworthy of consideration. A few days later (Oct. 20th) the *Novoe Vremya*, according to *The Times'* correspondent, "dealt with the Japanese army in a serious spirit, contrasting markedly with the flippant manner in which the *Viedomosti* discussed the same subject a few days ago." The writer in the *Novoe Vremya*, continues the correspondent, "points out that the weakest point in the Japanese army is the cavalry, the development of which has been hindered by lack of horses and by a want of suitable places for exercise. The war strength of the cavalry does not exceed 99 squadrons, that is, twelve or thirteen thousand men, the Russian cavalry being seven times as strong. A very favourable judgment is passed on the infantry. Above all the other arms," says the writer, "rank the infantry, the moral qualities of whom are very high, though their physical qualities are on a very much lower level. In warm countries the Japanese infantryman has displayed extraordinary powers of endurance, but he would hardly be likely to do so in a cold climate. Of the artillery little is known, and altogether, in the opinion of this writer, it is difficult to form an estimate of an army that has never stood the test of serious war."

Of course it is not possible to predict what qualities of endurance Japanese soldiers would show in a cold climate. Probably the verdict of the writer in the *Novoe Vremya* is unconsciously influenced by a thought that his own countrymen are conspicuously injured to cold. It has to be remembered, however, in this context that the Japanese surprised us all in 1895-6 by their winter campaigns in Manchuria and Shantung. Previously to that record most people held the same view as that now advanced by the Russian journalist; held it simply because, Japan being a comparatively warm country, it seemed natural to expect that her inhabitants would suffer severely if exposed to cold. But they did not seem to suffer in Manchuria and Shantung. However, the truth is that the Japanese soldier will never merge from the rank of unknown quantities until he has crossed bayonets with a Westerner.

The question of the cavalry is less obscure. Japan's weakness in that arm has long been patent; weakness, that is to say, according to the old standards when weight and speed were prime essentials for the purposes of a crushing charge. The charge, however, is said to have passed out of the roll of cavalry functions. No body of horsemen could live to ride within lance's length of a company of infantry armed with magazine rifles. It may be, therefore, that the Japanese trooper on his hardy, easily and cheaply procured pony will serve all the modern functions of a cavalryman, namely for scouting, for reconnoitering, for escorting. What, we wonder, is the experience of the Russians themselves in Manchuria. Probably they find Chinese as more serviceable than European ones. But at all events it is pretty certain that the Japanese cavalry is not numerous enough.

GARDEN PARTY IN TOKYO.

Count and Countess Inouye gave a garden party at their Azabu residence on the 28th instant to celebrate the Count's 68th birthday. The weather was extraordinarily balmy and bright, so that the garden, which yearly grows more beautiful, looked at its best. Marquis Ito and Marquis Yamagata, being absent from Tokyo, did not attend, and Count Inouye himself and Count Matsukata represented the *Genro*. But all the Ministers of State and virtually every Japanese of note in the capital were present, excepting, of course, the Progressist leaders. These parties of Count and Countess Inouye's are quite out of the general order of such entertainments. The amusements provided are always of the most novel kind, and the arrangements for refreshments show an exceptional care for the comfort and delectation of the guests. After some clever performances by a Japanese juggler, there was a highly picturesque and diverting dance by *geisha* in male costume, and this was followed by a striking display of combined legerdemain and acrobatics by the Chinese expert now so much in vogue in Tokyo. The last piece was a burlesque in congratulation of longevity, after which the business of refreshments commenced in earnest, having been preceded by some skirmishes with vermicelli and *sake*. Vociferous cheering for the host and hostess marked the conclusion of a most delightful party. The foreigners present were Mrs. Watanabe, Mr. and Miss Irwin, Dr. Loenholm, Mr. T. B. Glover and Captain Brinkley.

THE HOUSE TAX.

On the 5th of November a notice was served on the foreign house-owners in Yokohama calling upon them to pay the House Tax for the latter half of the 36th fiscal year of Meiji. Many of them noticed that the amount demanded was considerably more than the sum set down for the first half of the year and going into figures found that the taxes for the first half year had been multiplied by 3. For instance, one resident, who had been called upon in the first half year for *yen* 65.48, now found the City Office demanding from him *yen* 196.44—a difference of *yen* 130.96. He naturally demanded an explanation and was told that an additional levy had been made in consequence of the cost of the sanitary measures adopted by the city to stamp out the plague. On Friday, however, he received the following circular, in Japanese and English:—

TRANSLATION.

Yokohama, Nov. 1903.

SIR,—In virtue of the city's notice No. 132 dated the 5th of November, 1903, the time of payment of the municipal additional house tax to be assessed on the houses which existed on the 1st of April and the 1st of October, 1903, has been postponed till the 28th of February, 1904.

We, therefore, beg to notify the tax-payers that the additional payment already made by them shall be temporarily reimbursed in our office, and that even if the payment has not yet been made the tax notices already received by them shall be returned by bearer or post on receipt of the rectified notices herewith enclosed.

YOKOHAMA CITY OFFICE.

The amended notice called for *yen* 65.48—the original sum asked at the beginning of the year. We make no comment, for doubtless a further explanation is forthcoming from the officials.

TOKYO ELECTRIC RAILWAY.

The interactions of the Tokyo electric railways now partly or wholly in operation promise to be an interesting study. Up to the era of electric traction the city's public conveyances—*jinrikisha* excepted, of course—may be said to have been limited to the horse-trams which ran nearly direct from Shinagawa to Ueno and Asakusa, piercing the very heart of the city. For the uses of persons living on either side of this median line, there were only those most miserable of miserable vehicles, the *hako-basha*; veritable boxes on wheels, as their name indicated, drawn by moribund animals and driven by mendicant jehus. These wretched conveyances never served as feeders for the horse-tram, which belonged to a higher though still humble enough grade of carrier. If persons living at any distance from the tram route desired to avail themselves of its facilities, they tramped thither on foot, or, more rarely, rode thither in *jinrikishas*. Hence when the lateral districts of the city—lateral in respect of the median line—were supplied with transport facilities in the form of electric roads, and when the old horse-tram was converted into a tolerably respectable electric service, it seemed a reasonable expectation that the former would act the part of feeders to the latter, in some degree at all events, and that each supplementing the other, they would be mutually helpful. That is to say, many folks of the middle and upper class, living in the Kojimachi district, let us say,—folks who would never persuade themselves to ride in either a box-cart or a horse-tram—might be expected, when electric lines became available, to take the lateral cars as far as the nearest point of the median line, and then transfer themselves to the latter for conveyance to Asakusa, Ueno, or some of the many business regions *en route*. On that hypothesis, the number of passengers by both the lateral and the median lines should show a steady tendency to increase. Curiously enough the records thus far do not bear out any such theory. Here are the figures published with reference to four days of last month:—

	Old Horse Tram.		Street Railway Company	
	Passengers.	Fares.	Passengers.	Fares.
		Yen.		Yen.
24th ult.	75,118	2,457.....	18,562	396
25th ult.	127,916	3,647.....	15,522	325
26th ult.	126,041	3,578.....	13,493	312
27th ult.	116,962	3,325.....	14,379	313

It appears plain from this table that the opening of electric cars, which take the place of the old horse-trams, has had the effect of diminishing the traffic by the Street Railway, and that, so far from the one serving as a feeder to the other, the very opposite is the case. In fact, the inference suggested by the figures is that so long as the median service was limited to horse-trams, many people preferred to seek partial transport by the electric cars of the new Street Railway, rather than to secure complete transit by the horse-trams, whereas now that the latter have been converted to the electric system, many patrons of the Street Railway have deserted it. Of course in the present uncompleted state of the Street Railway no hard and fast conclusion is possible. One can scarcely doubt that when all the lines are completed so as to traverse the various parts of Tokyo, their interactions will be helpful so far as they do not compete. At present the only point made absolutely plain by the statistics is that these various lines have a great future, and that they will attract many times the maximum number of passengers that patronized the horse-trams.

The length of the Densha roads is 13 miles, if we remember aright, and it will consequently be seen that they are carrying an average of from 9,000 to 10,000 passengers daily per mile.

Another interesting fact is that the railway seems likely to suffer appreciably from the competition of the electric trams. It is now possible to ride from any point along the median line to Shinagawa by paying 3 *sen*, whereas the third-class railway fare from Shimbashi to Shinagawa is 4 *sen*. Hence the electric cars now attract not only citizens whose habit has hitherto been to take the horse-tram as far as Shimbashi and there entrain for Shinagawa or some more distant point, but also persons who, under former circumstances, would have walked to Shimbashi for the purpose of embarking in the train. It is stated that already the number of passengers by the railway from Shimbashi to Shinagawa and *vice versa* has undergone marked diminution; that the keepers of the *jinrikisha* stand at the former place find themselves idle, and that the neighbourhood of the Shinagawa station has assumed an unwonted air of prosperity. How largely the sum of one *sen*—one-fourth of a farthing—bulks in the eyes of the lower orders of Japan!

The experiences thus far furnished by the working of the Densha line in Tokyo—that is to say, the converted horse trams—bear out fully the remarks we made when the system of three *sen* uniform fares was contemplated. All the advantages of the service are monopolized by long distance travellers. Folks get in at Ueno, pay their three *sen*, and do not budge until they reach Shinagawa, or *vice versa*, and apparently this current of human beings between the two termini—a current into which nearly all the passengers have been drawn that previously travelled by train between Shimbashi and Shinagawa—taxes the capacity of the service to its full present extent. Hence it follows that short-distance travellers, who constitute the great bulk of the itinerant citizens, congregate in crowds at the various stations along the line, and have the pleasure of seeing car after car pass by, each labelled "full." It will naturally occur to readers of this comment that an easy remedy is available, namely, to increase the service of cars, and some may perhaps be disposed to condemn the *Densha Kaisha* for not foreseeing this great demand on its resources. That may be all very true, and we have no doubt that the Company, in consideration of its own interests, will endeavour to gather up all the fare-offering units now left complaining on the street-side. But whether a sufficient number of cars can ever be run on one line is a question, and assuredly there is not room in the main thoroughfare of Tokyo for another line. Already that thoroughfare is rendered almost impassable for ordinary vehicles owing to the strange indulgence shown by the Authorities towards the *Densha Kaisha*. On the quaintly frivolous plea that the track had been pounded into an extraordinarily hard condition by the hoofs of the tram-horses treading it for years, the Company was allowed to dispense with proper ballasting in laying its rails, and to dispense also with the expensive system of paving imposed upon other companies which have not had the advantage of gathering in for a decade and a half, the enormous profits taken by the horse-tram company. Tokyo citizens are curiously long-suffering. Perhaps those living in the immediate vicinity of the

lized by long acquaintance with the abominable condition of the street during the era of horse-trams, that they have forgotten what is required by an ordinary standard. Inevitably the company itself will suffer bitterly for its penny-rise and pound-foolish policy of not ballasting its line properly, but why, after growing to the fatness of Geshuran by a long-continued monopoly it should now have been permitted to go on tormenting the people by its old-surface disgrace, every one must be perplexed to conceive. Be that as it may, however, what interests us immediately is that the three-*sen* fare is work-entirely for the benefit of the long-distance travellers. Not only are the short-distance folks compelled to pay a high price in order that the others may ride cheaply, but to crown their discomfiture they are generally unable to ride at all.

A strange result of the opening of the electric trams may be noted here: there has been a large increase of crimes of petty larceny. *Jinrikisha* men, suddenly deprived of their *metier*, are stealing their daily bread. Unfortunate people, it is a bad time of year for facing want and privation.

THE KURE MURDER.

According to a telegram to the *Kokumin* from Seoul, the news of the assassination of U Pom-son at Kure has been received with rejoicing in the Imperial Court, but has occasioned dissatisfaction among the public at large. The Court naturally retains the sentiment of bitter resentment occasioned by the murder of the unfortunate Queen. When, indeed, can such a crime be forgotten or forgiven? It appears that the charge against U Pom-son was connected with the murder, and if it was a true charge public sympathy with him will be much lessened. The two men that compassed his death are now in jail at Hiroshima, and special measures have been adopted to guard Pak Yong-hyo, who is now at Osaka.

Mr. Pak has been talking to a reporter of the *Osaka Mainichi Shinbun* about this incident. He says that the chief assassin Ko had been an employee of the Min family—the family of the murdered queen—and that he fled to Japan five years ago on the occasion of an attempt to blow up the palace with dynamite. It appeared that an outhouse attached to Ko's residence had been used for the purpose of manufacturing the fulminate, and Ko was consequently implicated. On reaching Japan he soon became intimate with Pak Yong-hyo, and after winning the latter's confidence, or supposing that he had won it, he unfolded to Pak a scheme for "re- moving" all the Ministers now in power in Korea and overthrowing the dynasty by force of arms. Pak found these proposals so extraordinary that he took steps to obtain private information, the result being a conviction that the alleged attempt to blow up the palace had been a counterfeited affair, undertaken in concert with Korean officialdom, and having for its purpose the flight of a number of simulated refugees to Japan where, becoming intimate with the genuine refugees, they would be in a position to achieve the latter's destruction. Naturally after these discoveries Pak broke off all intercourse with Ko and warned his fellow-refugees against the man. Associated with Ko was Yon Hyo-chong, whom the police recently deported from Chiba on account of information about his nefarious designs. Pak says that this information was furnished by Ko, who, having quarrelled with his associate about some paltry matter,

betrayed him to the police. Thereafter Ko repaired to Kure, and to Pak's astonishment succeeded in ingratiating himself with U, who subsequently perished under his dagger.

The other assassin, No, was a servant of Ko. As between the two men, Pak thinks that Ko probably caused No to strike the first blow, Ko himself not being a man remarkable for self-possession. U was a person of some literary attainments. After his flight to Japan he held the post of chief instructor at the school (*Chō-tsu Shin-juku*) organized by Pak in Hyogo prefecture, but for some reason which Pak does not explain, he ceased to hold that post and retired to Kure. He was a man of a very argumentative disposition and Pak alleges that his record in Korea shows many collisions with officials owing to that propensity.

The *Yomiuri Shinbun* has a telegram from Seoul saying that the murderer Ko is there regarded as a hero and that a movement is on foot to collect a sum of three thousand *yen* wherewith to buy his pardon. If that be true it certainly illustrates the crass ignorance that prevails in Korea about her neighbour Japan. That Ko's deed should find some approval among persons who connect his victim with the brutal assassination of the Queen, we can well conceive, but that folks in Seoul should entertain the notion of freeing him from the pursuit of Japanese justice by means of a sum of 3,000 *yen* is too medieval.

"GREAT MASTERS."

Mr. William Heinemann, the famous publisher of London, sends us the prospectus and the first part of a new publication of beautiful pictures, which is issued at 5s. per part. The series contain superb photographs reproductions, by a new and improved method, of the finest works of the most famous painters from 1400 to 1800, with an introduction and descriptive text by Sir Martin Conway, Slade Professor of Art, Cambridge. The Prospectus says:—

After three years of careful research in the galleries of Europe and many private collections, involving the expenditure of a large sum of money, this new national publication is now placed before the public. It has taken the united efforts of William Heinemann & Co. of London, Hachette & Co. of Paris, and R. B. Long of Berlin, under the auspices of the Fine Arts Society, Limited, to produce the work in question, and only by co-operation has it been possible to issue this publication at so extraordinarily low a price. This great undertaking must create a revolution in the print business, and it should have a wide effect in widening the appreciation of art in all countries. Few who are interested in Art can undertake a journey round the great Galleries, and even a smaller number is it possible to become acquainted with the splendid private collections both in England and abroad. It is true that many of the works contained have been reproduced in the past by means of engraving, etching, and photography, but always at a price which has limited their circulation to the few who could afford guineas for single prints. The cheaper forms of reproduction were at once faithful and unattractive. By the process employed the beautiful copper-plate engravings of the past, with artistic effects and delicacies of shading, are now those of the very finest mezzotints.

Dr. Bode, the Director of the Berlin National Gallery, and perhaps best known for his monumental work on Rembrandt, is of this series of the "Great Masters."

"The new method of reproduction involves all the advantages required for a really accurate reproduction of the old masterpieces, and gives the appearance of the old velvet appearance of the mezzotints of English etchers in the 17th century. Just as to this day these are highly valued, so will, no doubt, 'Great Masters' gain the public and help to raise the standard of art."

matters of art. The present series has, in addition to the admirable quality of the reproductions, also the great advantage of being a collection of real masterpieces, taken with discretion and critical knowledge not only from the great public galleries, but very largely from private collections, which have never so rarely before been accessible."

The size of the plates (15 by 20 inches) is such that, framed, they make most handsome pictures, and afford scope for an adequate and clear presentation of almost any picture which is not crammed with small detail. The impressions are on the finest art paper with plate mark, and should in no way be confused with the flimsy prints that have found favour of recent years. The list of pictures so far arranged for include:—

Jun Steen, Portrait of the Artist. Earl of Northbrook's Collection
Reynolds, Mrs. Carnac. Wallace Collection
Vin Dyck, Prince of Orange. The Hermitage, St. Petersburg
Hackaert, The Ash-tree Avenue. Rijksmuseum, Amsterdam
Gainsborough, Mrs. Robinson. Wallace Collection
Hals, A Man with Guitar. Earl Howe's Collection
Rembrandt, Saskia. Cassel Gallery
Botticelli, Virgin, Infant Christ, and St. John. Louvre Gallery
Ghirlandajo, Portrait of a Lady. Mr. R. Kann's Collection, Paris
Holbein, George Giese. Berlin Gallery
Rujssdahl, Castle Bentheim. Mr. A. Beit's Collection
Velasquez, The Surrender of Breda. The Prado, Madrid

The work is entirely printed and produced in England, and there are four pictures in each part.

"THE TIMES" AND THE "ENCYCLOPEDIA."

The Times has thought it worth while to notice the extremely silly attacks made on it for adopting American methods of advertising. Nothing could more forcibly illustrate the hysterical foolishness of some phases of English conservatism than these attacks. Why should not American methods of advertising be adopted if they are found to produce good results? Every publisher of a book is justified in seeking to sell as many copies as possible, and he is little better than an imbecile if he neglects any legitimate means of attaining that end. *The Times* forcibly points out that had not their methods of advertising been available, the new edition of the *Encyclopedia* could never have been brought out at all. It cost a hundred thousand pounds sterling and without good prospect of a large sale the price charged must have been something enormous.

Fifty years ago, before the uses of newspaper advertising were fully appreciated, one thousand copies of the *Encyclopædia Britannica* were thought to be an extraordinarily large number to print at one time. It is probable that if the *Encyclopædia Britannica* in its present form had not been advertised—if attention had been called to its existence only by the favourable reviews which have appeared in newspapers—not more than two thousand copies would have been sold during the past half-year, since the last volume was published; for the book-buyer of to-day is so used to having his attention attracted by advertisements that it seldom occurs to him to buy a book which is not advertised, no matter how good the book may be. What would have been the position of the man of moderate means who desired to obtain the *Encyclopædia Britannica* if only two thousand copies of the volumes had been printed? He would have had to pay ten times as much for his copy. The cost of printing so small a number of copies would have been enormous.

There are, no doubt, persons who would prefer to read a newspaper without advertisements, just as there are persons who would prefer to see a landscape without railway metals or telegraph wires. But they would not like to pay two shillings a day for a newspaper without advertisements, to travel by coach, or to send urgent messages by private courier, any more than they would like to pay a guinea and a half, instead of six shillings, for a new novel, as they used to do only a few years ago, or to pay three

or four times the catalogue price of the *Encyclopædia Britannica* instead of paying less than half the catalogue price.

NOTES ON CURRENT EVENTS.

Mr. Charles Glidden has just concluded his third annual motor tour, in which he has established the longest automobile record known. Starting from Boston, he proceeded to Liverpool and crossed to Ireland, where he covered a total of 1510 miles. Thence he proceeded, via Hull, to Helsingfors, Denmark, thence to Helsingborg, Sweden, and proceeded northwards a distance of 1,540 miles. Having cut the Arctic Circle, he made Fredrickshaven, thence proceeded to Hamburg, and visited Berlin, Carlsbad, Vienna, the Styrias, and Salsburg. At Oberammergau "Christus," of the Passion Play, was picked up and taken for a ride to his great delight. Mr. Glidden, who was accompanied throughout the journey by his wife, then returned to England via Paris, and made his way to Liverpool, completing a loop of 6,670 miles. In the whole of this time the travellers met with no accidents, but their tyres were punctured on six occasions. Throughout the fifty-four days occupied in touring they experienced seventy-seven hours of rain. During the three annual tours Mr. Glidden and his wife have covered no fewer than 13,795 miles—in 1901, 650 in England and 1,350 in France; and in 1902, 250 miles in Austria, 2,700 in France, 608 in Germany, 503 in Italy, and 897 in Switzerland. During the 118 days spent on the road in the three years the automobilists passed in Europe 4,000 cities, towns, and settlements, 10,000 vehicles of all descriptions, and 3,000,000 people. The Arctic circle was crossed on August 15 last. In addition to these tours 12,000 miles had been traversed in America.

The return of Viceroy Alexieff to St. Petersburg at the end of the present month (November) is again confidently announced. His Excellency's departure at this time was predicted a fortnight ago, but the public then learned that the event had been postponed. It is difficult to divine the truth.

The anxiety to hear Mr. Chamberlain is so great in England that the big newspapers in London have fitted up electrophones in their offices which are connected with the places where Mr. Chamberlain may be speaking, and which enable their reporters to take down his speeches in London, no matter how great the distance from the metropolis. On the occasion of his speech at Birmingham on Nov. 5th the arrangements in London were so perfect that the *Daily Mail* was able to print the speech *verbatim* and have it selling on the streets in London 27 minutes after the close of its delivery. The electrophone beat the telegraph by one hour and 27 minutes. One of Mr. Chamberlain's admirers has recently told the world that the ex-Colonial Secretary's practice is to rehearse his addresses in advance by delivering them over a pipe to his private secretary; but he never supplies advance proofs to the press as do some American orators of note.

It would seem that the anti-tobacco-monopoly agitation, which promised at first to be so vehement, is gradually declining in volume and intensity. The persons chiefly engaged in the manufacturing industry at present have come—if some of our Tokyo contemporaries be well informed—to appreciate that they will receive com-

pensation for any serious losses to which the change of system might expose them, and thus, although they are said to entertain doubts as to the sufficiency of the compensation, they realize that a main pretext for agitation is removed. On the other hand, the Treasury has modified its programme in the sense that there will be no change of retail-dealers. A considerable reduction of numbers was contemplated at the outset, but that idea has been abandoned, and the dealers, not being now threatened with any revolution, regard the Government's plans with complacency. The country-people also are more than satisfied with the outlook, for they expect that the establishment of forty official manufacturing factories throughout the provinces will bring a marked access of prosperity to the districts of their sites. Finally, the Government is understood to be willing to grant special facilities to exporters of manufactured tobacco, such as its sale at cost price when *bona fide* intended for foreign markets. Perhaps one of the most potent reasons for moderation on the part of the tobacco-men is that they can not find any sympathy among the members of the Diet. The majority of the latter are said to regard the monopoly scheme as an inevitable means of obtaining revenue, and of course if the House of Representatives take that view, agitation is immediately deprived of its back-bone. But we (*Japan Mail*) question the accuracy of this optimistic forecast.

Mr. Sakatani, Vice-Minister of Finance, has nearly completed a history of Japanese finance, covering the whole of the *Meiji* era, as well as such previous periods as bear a close relation to the latter. The work, which will be in 15 volumes, goes to the press next month and will be fully issued before the end of 1903. If subscribed for in advance a single payment of 25 yen, or five payments of 6 yen will suffice. Subsequently the price will be 35 yen. One purpose of the work is to commemorate the 70th birthday of Count Matsukata, whose name has been so intimately connected with the finance of the *Meiji* era. Mr. Sakatani is eminently qualified for the task he has undertaken, and we entertain no doubt that his history will always remain the standard authority on the financial affairs covered by it.

On the 30th ultimo the Emperor attended the graduation ceremony in the Officers College at 10.30 a.m. The number of graduates was 675, among whom 8 had the honour to receive gold watches from the Sovereign in recognition of special proficiency in their studies.

Professor Hirayama, of the Imperial Japanese Observatory in Tokyo, discovered on the night of the 6th of March 1900, a new planet which he located accurately near the constellation Leo. His discovery was not endorsed by European scientists until quite recently, when M. Charles, of the Paris Observatory, verified its accuracy and communicated the fact to Professor Wolf of Heidelberg, who thereupon wrote to Professor Hirayama and desired him to name the planet. The Japanese savant chose the name, "Tokyo." This newly discovered star is, doubtless, an addition to the family of asteroids which have been growing more numerous year by year since Ceres first introduced itself to the notice of astronomers searching for the missing link in Bode's series.

THE TOBACCO MONOPOLY.

THE document which we publish elsewhere on the subject of the Government's project for the establishment of a tobacco monopoly, sets out with a disavowal of any desire to criticise the country's officials harshly, but the writers can not be said to have succeeded in making their practice conform strictly with their professions. They say some very harsh and uncalled for things which detract from the force of their general argument; as, for example, when they allege that the object of the contemplated measure is to "save the business reputation of a small official class," that "the only evidence of the Government's capabilities for managing a commercial enterprise is to be found in its management of the Wakamatsu Foundry," and that the Department of Finance is acting "under the warping pressure of its own supposed necessities." Such comments might have been omitted with advantage. The writers must be well aware that there is national need of some substantial development of revenue, and that the need, though possibly due in part to defects of financial methods, arises primarily from exigencies connected with the place Japan has won and the place she is seeking to win in the world. She is imperatively required, unless she resign herself to the condition of helpless spoliation now occupied by China, to spend large sums upon the development of her marine defences. Her statesmen sought to meet that obligation by continuing the rate of land tax imposed five years ago, a rate which had been proved by experience to be entirely within the competence of the people to pay and which was consistent with the soundest economical principles. Against that policy political parties rebelled, and the Government has now to choose between two courses: it must either burden the State with fresh loans incurred on account of unproductive expenditures; or it must discover some new source of revenue. It is well to keep these plain facts in view, since they are somewhat obscured by the rhetoric of the document we are reviewing. The Government, then, has adopted the theory of British financiers, namely, that luxuries should be taxed to the utmost and necessities relieved from imposts. In the former category, at the head of the category, it places alcohol and tobacco. Here it is that a cardinal difference of opinion arises between the Treasury and the tobacco-manufacturers. The latter, as represented by the document to which we are referring, claim that tobacco, though a luxury in most European countries, is an article of necessity in Japan. If that were true there could be no second opinion as to the error of the projected policy. But is it true? Does any one seriously believe that tobacco is a necessity in Japan? We certainly do not believe it. We do not believe it of any country in the world, least of all of

a country on which nature has lavished so many of the gifts that make life delightful. The question does not invite ordinary discussion. Medical experts may have something to say about it, but in the meanwhile the impression conveyed by such a contention on the part of the tobacco-manufacturers is not favourable to their cause. Assuming then that, as in England, so in Japan, alcohol and tobacco are preeminently taxable luxuries, there remains the problem, how best to tax them. It is not to be imagined that any reasoning man is an advocate of State monopolies from a theoretical point of view. State monopolies invite abuses of the most flagrant description, and we do not know of any case in which they have proved the most efficacious means of accomplishing the end in view. Japanese financiers, however, or rather those now in power, have declared themselves in favour of a State monopoly in the case of tobacco, and since we must assume them to be familiar with all the arguments *pro* and *con* as well as with the experience of other countries, it would appear that they have chosen this objectionable system *faute de mieux*. The fact is regrettable and we look to the Diet's investigations to endorse the necessity or to point out some alternative route, since, pending the Diet's discussion all the materials necessary for forming a judgment are not available. England raises an annual revenue of 10½ millions sterling by means of a tobacco tax, without recourse to anything in the nature of a State monopoly. France raises a revenue of 456 million francs annually by various state monopolies, among which tobacco is the principal. Japan gets 11½ million yen from her present monopoly of leaf tobacco; an obviously inadequate figure. Her statesmen now in office would have her follow France's example by extending her monopoly of the leaf to the manufacture also. Certain it is that whether by process of monopoly or by some other means she is bound to further exploit this source of revenue. Under the monopoly system something very like wholesale confiscation threatens the present manufacturers and the prospect naturally wrings from them a bitter cry. Everybody must sympathise with them, and everybody must admit that the State is bound to make the situation as easy as possible for them. That is a matter of compensation. The document we publish this morning speaks of compensation amounting to one year's income. We have always understood that the basis was to be three years' income. Either figure looks insufficient unless it be supplemented—as it may very well be supplemented—by some device for continuing to give employment under the new system to the old manufacturers. That, again, will be a matter for the Diet's consideration. The manufacturers must trust to the justice of the people's representatives by whom their case will be judged. As to the alleged unconstitutionality of the proposal, a point which has been much insisted on by foreign local journalists, the broad

fact is that the enjoyment of all constitutional privileges is subject to regulation by law and ordinance. The Diet stands between the people and any arbitrary deprivation of constitutional rights. There is no occasion, therefore, to talk of unconstitutionality, above all in the case of a Cabinet which, standing aloof from political parties, submits its measures to Parliament on their own merits and without any adventitious aid from partizanship. We have no doubt that justice will be done to the tobacco-manufacturers, but, at the same time, we entirely agree that their interests counsel the best possible presentation of their case to the public ear.

CONCERTS IN TOKYO AND YOKOHAMA.

A very successful concert, under the distinguished patronage of several of the Imperial Princes and Princesses, was given at the Utsuro Academy of Music on Saturday afternoon. The chief interest of the concert centred in the orchestra, which certainly acquitted itself well, winning honours all along the line. The good work done by the members of the Imperial Household Band reflects great credit on the conductor and trainer, Prof. Dubraveich, and we have no hesitation in saying that he will form an orchestra in due time, provided he receives adequate support and encouragement from the proper quarter, which will prove worthy of such a distinguished name. The best orchestral number on Saturday was, no doubt, the *Fantasia* a.d. op. "Cavalleria Rusticana" (Mascagni). Here, barring a few minor blemishes, every nuance of expression was brought out, and the lights and shades leading to the climax were well worked up. We should enjoy listening to this number again. Prof. Dubraveich delighted his audience by his clear, sympathetic violin playing. His tone is good, sound and pure, and his artistic rendering of Simon's "Berceuse" and No. 3 of the Suite for violin and piano (Ries) brought forth hearty applause. We should mention that on his way to the Academy on Saturday, Prof. Dubraveich had the misfortune to be thrown from his jinrikisha, owing to a cart getting mixed up with an electric tram and being hurled across his path, and the unfortunate gentleman severely sprained his wrist and arm. Not to disappoint his audience, however, though suffering great pain, he substituted two slower numbers than those printed on the programme, and played them most charmingly. He was assisted by Mr. W. Karl Vincent at the pianoforte. In the course of the afternoon Mr. Vincent played as solo a selection from Liszt—"Années de Pèlerinage," No. 1—and as usual won hearty applause for his masterly execution and sympathetic handling of the theme. The last two items by the Orchestra, being descriptive pieces which introduced the calls of cuckoo, nightingale, quail, frog, etc., seemed to be the most popular pieces in the programme, judging by the acclamations which followed them. The second part of the programme was devoted to Japanese music.

The second concert of L'Alliance Française took place on Saturday evening in the salons of the Oriental Palace Hotel, kindly granted for the occasion by Messrs. Muraour and Dewette. There was a very large audience. The various numbers on the programme were greatly enjoyed. That with which M. Emile Labarthe opened the entertainment was a fine piece, and was fittingly followed by M. Ch. Laurent's admirable songs. Madame André's singing was charmingly effective. Of M. Gab Lefeuve it has to be said that he has a sweet and highly trained voice. As to the Count de Perigny we may simply note his excellent elocution and fine sentiment. Mr. R. Jamin's declamation was a highly interesting feature of the evening's affair. Of the programme in general we must say that Madame André excelled herself, and that Madame Lacroix

was a most appreciative accompanist to most of the numbers. We append the programme:—

IERE PARTIE.

"La Langue Française et l'Étranger."

Conférence par M. Emile Labarthe.
Avocat à la Cour d'Appel de Paris,
D. G. A. F. P.

IIÈME PARTIE.

- I.—Stances de Nilakantha (Lakmé)...L. Delibes.
Un Duet par M. Ch. Laurent.
Chanté par Madame Lacroix.
- II.—Le Soir.....Gounod.
Chanté par Madame André.
Accompagné par Madame Lacroix.
- III.—Berceuse.....Grieg.
Je t'aime.....Grieg.
Chanté par M. Gab. Lefeuve.
Accompagné par Madame Lacroix.
- IV.—Le Soir d'une Bataille.....Leconte de Lisle.
Déclamé par Le Comte M. de Périgny.
- V.—Si j'étais Roi.....Adam.
Chanté par Madame André.
Accompagné par Madame Lacroix.
- VI.—Le Vallon.....Gounod.
Medje.....Gounod.
Chanté par M. Gab. Lefeuve.
Accompagné par Madame Lacroix.
- VII.—Le Sour-Préfet aux Champs.....A. Daudet.
Déclamé M. R. Jamin.

Under the patronage of Japanese ladies of Yokohama, a benefit concert to raise funds for the Yokohama Orphan Asylum was held on the afternoons of Nov. 28th and 29th at the Kirakuza theatre, Isezaki-cho, Yokohama. The various musical and dramatic pieces were warmly received.

AN ACCOUNT OF THE IMPORTANT PLACES ON THE YALU.

A correspondent of the *Straits Echo* sends the following interesting account of some of the places on the Yalu that are attracting so large a share of attention at present:—

Under the terms of the treaty pending between China and the United States, a treaty port is to be opened to foreign trade in this region *some time*. At first Taku San, situated on the south-east coast of Manchuria, was the spot selected by an all-wise State Department at Washington on the advice no doubt of the Diplomatic representative at Peking, but for many reasons the opening of this place to foreign trade has been abandoned, and a port on the Yalu substituted. America's second selection for a treaty port lies some five miles from the fairway channel, and is connected with the main stream by a small two-foot creek which winds its sticky way for upwards of four miles amid almost impassable plains of mud and sand which only disappear from view when about three-quarters of the flood tide have made up stream. As the steamers that ply between Chefoo and the Yalu have never proceeded further than this point, it has become a sort of dépôt, a place of transhipment for both passengers and cargo. Furthermore it has always been the mart for timber—the rafts floated down stream from the upper waters of the Yalu and its tributaries being broken up, sold, and loaded on the large junks that distribute the logs at various points along the shores of the Gulf of Pechili, and even as far south as Kiao Chau Bay in Shantung. It will be seen then that Ta-tung-kou, a small place of transhipment, utterly inaccessible to foreign steamers of the smallest and shallowest type, is entirely unsuited to a treaty port, and to uphold the policy of the open door—a policy by which it is hoped to save the trade of this waterway to the foreign nations of the world, and perhaps so secure for some time to come the integrity of Korea. I may add that during any strong breeze, lightering is almost an impossibility for steamers lying in the channel. The import cargo which I saw transhipped at this point consisted principally of Shanghai flour, cotton yarn and raw cotton, the latter being largely used at this time of year for padding the winter garments of natives. Amongst the exports at this season (autumn) are a goodly supply of silk cocoons and beans.

Proceeding up river from Ta-tung-kou, one constantly meets rafts en route from the forests on the upper waters, bound for the depot at the entrance of this waterway, and to those who have been accustomed to see timber (teak as a rule) floating down the Irrawaddy, Salween, or Menam, these rafts appear to be very diminutive—nevertheless, the logs are of large cubical measurement.

Situated about fifteen miles from our starting point on the left bank, or Korean side, is Yong-am-pho,

locally called Yoonpao, the concession granted in 1896 to Baron Gunsburg, the well known Russian Agent in the Far East. Here quite a small settlement is established, saw-mills are being erected and fine dwelling houses, the frontage is bounded, and work goes on apace. The civilian element is composed of the Tsar's reserve soldiers, while not a few of the regular Infantry and Cossacks keep watch and ward over this slice of leased Korean territory. A very considerable amount of timber is stored, both on land, and along the shore to the north-eastward of the settlement, and besides the wood which will come down from the forests on the upper waters, Russians are at present busy, it is the intention of the Yong-am-pho people to purchase rafts on their way to the coast.

The scenery about this place is extremely pretty. Overlooking the settlement, and skirting the river bank are hills about three hundred feet high which fall sheer to the water, while the south-eastern slopes incline gently to the level plain which stretches away to the coast line to the rear, covered with stunted fir, and a few oak trees, with a carpet of beautiful feathery grass, and wild-flowers.

Before me lay the river, bearing away a few points east of north, behind me lay semi-cultivated land dotted with Korean huts, while white robed natives leisurely worked away on their small holdings. The Korean apparently always has time at his disposal, for many of these quaint folk sauntered up the hill to inspect the foreigner and as they spoke Chinese I was able to get along with them. Soon the white robed group was augmented by the arrival of five Chinese—intelligent men—who "chipped" into the conversation, and gave me a bad account of the Russians, who, they said, seized what they wanted from the natives and never paid them, and if the wretched brow-beaten peasantry remonstrated they were generally thrashed within an inch of their lives. When I had finished my survey observations, I moved eastward to the hill immediately overlooking the settlement from which spot I made a sketch of the whole scene. My most important discovery was a small fort in course of construction on top of a small hill jutting up from the shore to the eastern end of this concession and cleverly masked by trees. When subsequently walking about the place, I was halted in the vicinity of this hill by a soldier on duty, otherwise I wandered freely through the place, and conversed with Chinese store-keepers and others. I spent one interesting and instructive day at Yong-am-pho, and then weighed anchor and proceeded up river. Situated at a point five miles above the Russian Concession, on the right bank, or Manchurian side, the foundations of what might be another small fort are being prepared on top of a cliff jutting out on the river, and this point is likewise guarded by Russian soldiers. A little more than a mile further on is a Lekin station where rafts and junks must stop, report themselves, and pay the necessary duty. Here the river bears away to the north-east and continues in this course for about five miles, when it divides, leaving a long low island in mid-stream. On the branch bearing to the north-east and abreast of the island is Sha-ho, or, as it is called on the map Antung, this latter name being really the designation of the Hsien or district in which the town is situated. A river frontage of about one mile is thickly studded with junks, nearly all of whom carry away timber which is piled in vast quantities on the shore. About one mile and a half to the rear of the river and town is a table-like hill, well wooded with fir and stunted oak trees, and from this vantage point I was able to sketch in the surrounding country, one of the first points to come within my purview being a Russian military encampment on high ground adjoining the town. It proved to be the barracks of 300 Russian cavalry, who have been stationed at Sha-ho for nearly three years, to the terror of the peaceful inhabitants of this place.

The superiority of Sha-ho over Ta-tung-kou for the purposes of an open port is at once apparent to the pioneer, and the points in its favour may be summed up as follows:—(1) By careful navigation steamers of the small coasting type can come right up from the sea, and alongside wharves when they are erected. (2) The town is a fine business centre, extremely cleanly, with wide streets and good shops and *hangs*, which lend an air of wealth to the places, which really exists. (3) It is highly desirable to maintain the open door in this vicinity of the Manchurian-Korean frontier, and no other equally suitable spot is to be found. (4) Sha-ho, one of the cleanest Chinese towns known to me in my experience of the eighteen provinces, lends itself naturally to great improvement under foreign auspices. For the foregoing reasons I strongly recommend both the United States and Japanese to press for and obtain China's consent to open Sha-ho, in the *An-tung-hsien Yalu-Kiang*, to the trade of the world, and to utterly eliminate from their minds the fictitious desirability of such false gods as Ta-tung-kou and Ta-Ku-Shan.—*Free Press*.

The correspondent of the *Morning Post*, telegraph-

ing from Sha-ho, Yalu River (*via Chefoo*.) Oct. 8, states:—I have completed an inspection of the suggested open port of Ta-tung-kou and Sha-ho. The former is at the entrance of the Yalu River four miles from the fairway, in a channel impassable on account of intervening mud-banks. Lightering in a strong breeze would also be impossible. Altogether I regard it as utterly unsuited for the purposes of the "open door." Fifteen miles up the Korean shore at Yong Am-pho is the Russian concession where saw mills are in course of erection, and a settlement is being established. Seventy Russians, including soldiers, are also at this depot, where rafts from the upper waters arrive. A small fortification is in course of construction. Fifteen miles higher up the river is Sha-ho (Antung), a healthy Manchuria port and an active business centre. The head navigation is open to junks and accessible to coasting steamers. It is closed, however, by ice from December to February. A large export trade is done in timber, bean-cake, and waste silk. The trade potentialities are great, and I should strongly recommend the opening of this as a free port. Two hundred Russian cavalry have been stationed in the town for the last three years. The navigation of Wiju, ten miles higher up, is impossible for steamers. The Russian manager at Yong Am-pho states that two hundred thousand Cossacks are now in Siberia, and that Russia will not commence any hostilities till she is certain of success.

Of course it is erroneous to assert that Yong Am-pho was granted by concession to Baron Gunsburg in 1896.

TOBACCO.

We have received the following—needless to say from representatives of the tobacco interest—and we publish it in the interests of fair play:—

NOTES ON THE TOBACCO MONOPOLY SCHEME FORMULATED BY THE FINANCE DEPARTMENT FOR PROPOSAL TO THE COMING SESSION OF THE DIET.

Since this scheme had its origin in the Finance Department, it is fair to presume that the interviews and statements that have been given on the subject by the Minister of Finance, and also the Vice Minister, present all that may be said in favour and justification of the scheme. This being so, it may be interesting to carefully analyze these statements and it may be instructive to critically examine the reasons which are urged for proposing the scheme.

It must be understood that, in what may be here said, there is no wish to give expression to any personal ill-will against the officials referred to, but simply to discuss their proposed official acts and the reasons given for them.

A careful examination of the official interviews and statements shows conclusively that there is but one positive and direct reason given for the official action; namely, the desire to collect more money to enable the Finance Department to carry out certain expansive schemes of the present Government. The other considerations urged can hardly be called reasons for the undertaking, but seem to be apologies for a shocking scheme of partial confiscation, which, it seems to be practically admitted, demands some apology and explanation.

The people of Japan are very loyal to His Majesty the Emperor, and have a great affection for him because his every act has shown that he has their interests at heart; they are also devoted to their country, and would make any sacrifice necessary to maintain its integrity. They readily admit that if His Majesty, or the Country, needs additional funds for the public good, they must be obtained from the people by *general taxation fair to all*, but they fail to see why they should be made to suffer for what must be mismanagement in the Department of Finance, which has caused it to spend more than its collected income; they also fail to see why, in order to save the business reputation of a small official class, the Diet should be asked to levy, not a general tax, borne equally or proportionally by all, but to authorize the practical confiscation of the individual property of a certain class of manufacturers who have, by the use of their money and by their honest exertions, built up a trade which is a credit to the Empire. The people believe that no new legislation by the Diet is necessary; under all normal conditions, the public resources of Japan are fully equal to her needs if her finances are managed in a careful and economic way; and all additional needs for expansion could be well covered, if the official class would give due effect to the laws already passed by the Diet.

After stating definitely the one reason for the proposed action of the Finance Department, the Ministerial Apologist proceeds to make an incomplete statement of certain ill-digested facts in the history of other nations to justify his proposal. He admits that

England, a country which ever since she shook off the yoke of feudalism, has represented the highest type of civilization and free government, with the greatest respect for the rights of individuals, has never, even in times of the greatest necessity, resorted to the institution of a Monopoly, but lightly brushes this precedent aside and points with final conviction to the course which France and certain other continental nations have pursued. He makes France bear the burden of justifying his proposed course, and does not realize that for one nation to adopt the course pursued by another, without a careful weighing of the conditions on which the adoption of the course rests, is, both logically and economically, one of the most dangerous things that a statesman can do. Let us look into this French precedent cited with so much satisfaction by the Minister:—

Some years ago, when Imperial servants had not learned to bend all their energies to petty politics and the maintenance of a party in power, or of a particular government in office, but studied the good of the people over whom they had been placed, one of the most learned political economists of England gave to the world a statement of a principle of statesmanship which has proved most valuable, and has everywhere been received with respect. He stated that the highest aim of honest government in levying taxes for the expenses of the Nation should be to determine what were necessities in the life of the people, and what were luxuries, and to let the weight of taxation rest as lightly as possible on the necessities. He then goes on to say that the greatest care should be exercised in determining whether an article is a necessity or a luxury, and says that each country must settle this question by reference to conditions existing within itself, it being most dangerous to follow the lead of another country. He forcibly illustrates this danger by making a comparison of the conditions existing in England and in Turkey: in England beer was a necessity to the working man, while tobacco was a great luxury whereas in Turkey tobacco was a necessity in the every-day life of the people, and liquor of all kinds an unusual luxury. It would therefore, be manifestly improper for either country to follow the other in determining that either article was or was not a necessity to the life of her people.

Applying this illustration to comparative conditions existing in France and Japan we find that the Minister has fallen into the very error that the great political economist has warned us of: it cannot be claimed that tobacco was in any sense a necessity to the life of the French people whereas it is an admitted necessity in the life of the masses of Japan. The French precedent, therefore, cannot with any logical honesty be made to apply to Japan.

The Minister prides himself on the fact that France paid to the people no compensation on the creation of her monopoly, whereas he proposes to pay to the manufacturers one year's income. This comparison does France an injustice, and shows that the Minister has again fallen into error in not studying the comparative conditions.

The Tobacco Monopoly was established in France a great many years ago at a time when private individuals had not to any great extent invested their money and their life energies in the manufacture of tobacco, therefore the French Government, in creating the Monopoly, robbed its people of nothing and did not in effect confiscate their property. There was no moral requirement for a payment by the French Government to its people for a business which in the early days it started anew for itself. In Japan, on the contrary, the Government has deliberately waited until many of the people of the Empire had invested their all, amounting in aggregate to many millions, in the building up of this manufacture which they have in many cases inherited from their ancestors, and then it forcibly takes their developed business from them, making a pitiful return of one year's income. Was there ever an instance of such injustice perpetrated by any civilized nation? A clear understanding of these facts will show how fallacious is the reasoning of the Ministerial Apologist when he attempts to justify what is, under conditions existing in Japan, a high-handed outrage by drawing an incompletely stated parallel between it and an act of the French Government done hundreds of years ago under conditions which made it both reasonable and honest.

The Minister raises the socialistic cry of "American Tobacco Trust," and with much theatrical effect. The immediate force of this reference is not very clear, since it is well understood that The American Tobacco Company does not hold a single share in any of the tobacco companies of Japan; the only holding of any foreign company being that of an English corporation, the British-American Tobacco Co. Ltd. We are no apologists for great Trusts still, in this day of great combination of capital in foreign countries, it would be worse than madness on the part of Japan to attempt to drive away foreign capital, whether it comes seeking industrial business, or as loans upon R.R., or in any other form. Experience has shown that great capital is required to successfully prosecute great business in

competition with other countries, and for Japan to object would be folly, as well as be against the interests and rights of the people. Even if some dangers are involved in the establishment of a Commercial Trust, it is hardly open to the practical objection that could be urged against a government monopoly, which is a Political Trust. Competition is the life of trade and the guaranty of a good product and a fair price. A Commercial Trust, however well formed, must always be prepared to meet competition, while in the case of a Government monopoly, competition is made absolutely impossible, and this not by the perfection of the working system of the organization and its product, but by the autocratic *fact* of the Authorities. There is another more marked danger in the establishment of a Political Trust:—If a monopoly can be established in the manufacture of tobacco, and the general principle of monopoly manufacture agreed to, what reasoning will prevent officials declaring a monopoly in the production of coal, oil, sake, soy, beer, and other great products of commerce, and the placing of these industries under the control of those in office? The immense army of those who would then hold their positions under the appointment of the members of the Government in power at the time, would be forced, with their votes and influence, to keep their employers in office. We would then have a Political Trust, which is the most dangerous form of a trust, since it destroys the rights of free government, and saddles the country with a government which it cannot control. It is understood that, while in America it has been frequently suggested that the Government should take over the railways and transportation facilities of that country, and also certain other industries, the dangers of creating a Political Trust have always nullified the suggestions. The people are, apparently, unwilling to give up their rights and make it impossible for them to shake off a set of men who for the time being constitute the government, if at any future time they are dissatisfied with their acts or policies.

It is plausibly urged by the Government that the establishment of a Monopoly will increase the export of manufactured tobacco. The increase of the export trade is always a matter of the greatest importance, since it brings outside money into the country. The reference to the export trade is an unfortunate one for the Government: a little thought would convince the Minister himself that where the producing organization is without competition to keep the product up to the mark, and the confessed purpose of the establishment is to get in all the money possible, there can be no hope of working up any foreign trade in competitive markets, where the monopoly product must meet the effects of all improvements in machinery and cheapness which competition demands. If proof of this fact is desired, let the Minister turn again to France, from whom he seems to have received much of his inspiration. It is generally conceded that in the whole world there is no country in which the tobacco products are so notably bad as they are in France, and few countries in which their general cost to the consumer is so high. This situation makes export impossible; the markets of the world are not in search of such goods. If the Monopoly is established in Japan, the export trade in manufactured tobacco products, which has been built up by private enterprise by the expenditure of so much labour and money, and which is beginning to bring so much money into the country, will surely dwindle and die out completely. The Government is understood to assert that under its control the grade of the product can be improved and the cost of production cheapened. The only evidence that the people have of the value of these assertions and of the Government's capabilities for managing a commercial enterprise, is to be found in its management of the Wakamatsu Iron Foundry. Certainly this effort on the part of the Government does not furnish much encouragement to hope for surprising good results from its management of tobacco manufacture.

With the cigarette and tobacco business of Japan in the hands of the Government, there will be a concentration of interest and efforts on the part of the great tobacco companies in England and America, and China will become the great field of operations, where, with cheap Chinese labour, improved machinery, best manufacturing experts, and cheap English and American money, as well as American and Chinese Leaf Tobaccos free from duty, it will be simply impossible for Japan to find a market in China, Straits Settlements, or India, for her cigarettes or tobaccos. Moreover, with Japan surrounded by water, the cheap cigarettes and tobaccos offered in China will be a great incentive to smugglers, and the Government will, no doubt, soon find tens of millions of cigarettes being smuggled into Japan. Several factories are already starting up in China.

It is practically impossible for the Minister to make good his promise that the great majority of those now employed in the manufacture and sale of tobacco will be employed under the Government monopoly, and even if it was, it would force the

people to move from those places where now engaged and where thousands of them have lived from infancy, and this would be a great hardship upon the poor employees.

The effect of the enactment will be to throw a large part of the skilled labour of the Empire out of employment or to reduce it to the level of unskilled and poorly paid labour. The consumer, too, must suffer since he must use a poorer product and must pay a higher price for it, whatever the Government may now say to the contrary.

The statement made by the Vice Minister of Finance to the poor unfortunates who were before him to request some respect for their property rights, to the effect that it was true that their business interests were to be taken from them, but that in doing so the Department of Finance was trying to play the part of "an affectionate mother" to them, must have struck them as a sarcasm that added insult to the contemplated injury. It was an unfortunate simile for the public official to use, since it cast a most unwarrantable aspersions on the ideals of motherhood in Japan: it is impossible to believe that he, when he used the simile, could fail to see its force, or that he could have believed that the mother lived in the Empire who would call her full grown sons before her and, without consulting them, deliberately rob them of their business and of all they had in the future, in order to maintain her own social and financial position, at the same time warning them that if they grumbled or indulged in open or combined criticism of her act, great scandal would be produced and much personal discomfort brought about.

The people of Japan are not children to be lectured and disciplined. Our Government has informed the world, in its treaties, that we are the full equals in civilized development of any race on the face of the earth and to prove ourselves worthy, we must contend for what is right and take a strong position against the wrong, even to speaking against the Finance Department when it proposes to take away our property and destroy all our vested rights in business. We must cry aloud and appeal to the great constitutional power, the Diet, to see that our business property and all vested rights, guaranteed to us under the Constitution, are carefully preserved to us and our children.

What the country requires most at present is the more complete development of its resources, not by the Government, but by the people. This necessitates the investment of capital, and, until the enterprises are fully developed, this money must be brought in from outside, either in the form of loans or "Share Interests." The bare suggestion of this monopolistic tendency on the part of the Government, not only unsettles contemplated enterprises within the country, but will operate to cut off all chance of introducing foreign money for development, since foreign capitalists will be quick to see that there can be no safety in building up the business of railways, the production of oil and coal, and the manufacture of sake, soy, beer, and many other enterprises.

Investors know that they are not safe in furnishing capital for enterprises such as powder factories and arms factories which are often necessary to the maintenance of the Government, and which it is considered legitimate for the Government to take over and run for its own purposes, or in furnishing capital for the manufacture of any article considered dangerous to the public, such as the manufacture of opium; but when it is learned that the Government of Japan has stepped beyond these limits and announced a policy of monopolizing the manufacture of cigarettes and tobacco, and that she reserves the right of paying for the taking of *traded interests* any small sum that she at the time arbitrarily considers proper, it will soon be found that the introduction of outside capital is attended with much more difficulty than it has been, in fact, it will be rendered well-nigh impossible.

Fortunately, the Government cannot, under the Constitution, put its programme into effect without the consent of the Diet, which stands as the guardian of the people's interests when they come into conflict with the purposes of the Government, or of any of its departments. In the Diet there is a strong party founded and for a time actively led by one of the greatest broad-minded statesmen of the world. There is also in the Diet a party headed by one of the greatest and fairest statesmen of his day. It is confidently believed that neither of these parties will, though they agree that the public revenues should be increased, consent to the accomplishment of this purpose at the expense of one class of the Empire's subjects.

We think tobacco is already bearing its full share of the burden in paying the enormous monopoly rate of 150 per cent. to 240 per cent. The manufacturers also have to pay special license tax on capital, income and business taxes as well as additional City taxes that are simply enormous.

The Vice Minister virtually admits that the present Leaf tobacco monopoly is a failure. Well, if the Government will apply strict, economical business methods in the management, it will prove a success

or, what is better, if they will change the present ad valorem monopoly rate to a specific amount per pound, this will insure success. The Government knows how many pounds of Leaf tobacco are manufactured in Japan, and by making the rate specific instead of ad valorem, it can tell quite accurately how much revenue will be derived. It is very easy and simple.

We appeal to the Diet to see justice done the Tobacco and Cigarette Manufacturers, and if an additional tax has to be imposed, let it be in such a form as permits the consumer to share the burden of the State's necessities.

We believe the Diet will find, when it comes to the consideration of the question, that the revenues now authorized, if properly and strictly collected, will be amply sufficient for all the legitimate needs of the Government; but even if it should decide that some provision must be made for increased revenue, we cannot believe the great constitutional power, the Diet, will suffer violent hands to be laid alone upon the business and property of the tobacco and cigarette manufacturers, but that such a provision will be made that not even the charge of injustice, much less confiscation, can be made. When a man has built up a business in a particular line, has put all of his money and energy into it, has attained an enviable reputation in it, and knows nothing of any other business, he expects to live for the rest of his life on the income to be derived from the investment and the reputation that he has made. A few years' income is a pitiful allowance for the loss of an assured income for all of his future years. It is indeed cruel to contemplate such action on the part of the Government, especially when the compensation proposed by the Finance Bill is the pitiful amount of one year's income.

It is hoped that the Diet will take all these facts into consideration and that it will reach a fairer conclusion as to the rights of the individual than that reached by the Department of Finance under the warping pressure of its own supposed necessities. Let it not be said that the Government of Japan has arbitrarily taken the business or property of any class of its subjects, and that too without adequately compensating them. To do so would not only be cruel, but absolute confiscation.

Marquis Saionji said, in his great speech delivered at Kyoto on November 8th, that the attitude of the Constitutional Party should be to "make the mind of the people your own," and that it was the duty of the Constitutional Party to find out and represent the "wishes and hopes" of the better and more intelligent part of the population. Is not the mind of the great mass of intelligent people against the manufacturing monopoly bill? And are not their "wishes and hopes" centred in the defeat of the bill?

THE NIPPON YUSEN KAISHA.

We have obtained an authenticated version of President Kondo's speech at the general meeting of the Nippon Yusen Kaisha on the 26th of November, and we translate it in full:—

GENTLEMEN,—The results shown by this half-year are somewhat better than those of the preceding period. There has been an increase of over 350,000 yen in our income, so that, after deducting 800,000 yen, as in the previous half-year, on account of the capital fund for developing our services and improving our fleet, and after making the necessary appropriations for the legal reserves, we are still able to carry forward a sum of 268,000 yen in excess of that carried forward last term, making a total of over a million yen under that heading, on which lines I am now able to submit a proposal. Summarizing the facts, whereas there has been an unavoidably bad result on our three great lines to Europe, America, and Australia, owing to violent competition among the companies engaged, on the other hand the prosperity of the Hokkaido fishing industry and a plentiful rice crop caused a considerable movement of goods; to which facts must be added a yearly growth of confidence in our ships among the travelling public, leading to an increase in our passengers, as well as the influence of the Fifth Domestic Exhibition and an exceptional flow of Chinese emigrants to Canada in anticipation of the larger poll-tax that will be imposed in that country from next January. These combined factors produced the fortunate result I have alluded to. It is, in truth, only a temporary phenomenon, but in view of the state of the times it must be regarded as a matter for much congratulation. With regard to the prospects for next half year, I am obliged to confess that I entertain much uneasiness. Already the influence of the political situation has made itself felt on our European line. Of late we have been unable to obtain cargo not secured against war risks, and since a refusal on our part to bear the additional

insurance would have immediately driven shippers to vessels unattended by any such perils, we have had no alternative. Our income has suffered correspondingly, and if things continue as they are, not only must we face a diminution of revenue on that account, but we shall also forfeit the credit built up during many years. Cargo will unquestionably pass into other hands, and if, by any chance, the peace between the two countries be disturbed, we shall then have to close our European line altogether. And not our European line only, but also all the other imperilled lines will fall into the same position. In that event it is obvious that the subsidies and encouragement funds granted by the Government on account of those lines would cease. Of course some of our vessels might find employment for official purposes, but it is not to be supposed that all the ships on our foreign routes could be thus occupied. The others would have to be laid up and we should have the misfortune of being obliged to maintain them in idleness. Under those circumstances it is exceedingly doubtful whether we should be able to set aside our legal reserves, and we could scarcely expect to see any profits applicable to purposes of dividends. Some folks imagine that in abnormal times the income of a maritime carrying company is greater than in normal years, but that is merely a visionary notion suggested by the experiences of the China-Japan war. When the peace is disturbed all enterprises suffer alike, and maritime-transport companies receive a specially severe blow. This then is not a time for indulging in pleasant dreams of the past. I can not but desire earnestly that the situation were speedily solved. Of late we have not been without rumours suggesting that a pacific issue may be anticipated, and I am sure that you, gentlemen, unite with me in hoping that our mutual anxiety may prove to have been unnecessary. Even though the peace be disturbed, however, we have the sum of 3,300,000 yen, representing a reserve for the equalization of dividends, which has happily been accumulated with your approval. Adding to this the sum which I trust you will agree to carry forward, there will be a total of 4,300,000 yen; sufficient to pay a twelve-per-cent. dividend for 1½ years, or a ten per cent. dividend for 2 years. This must be regarded as the happy consequence of providing for a rainy day while the sun shines.

It has been my custom at each of our meetings to speak to you of the trend of the world's maritime carrying trade, but of late nothing specially novel has come to my ears. The only thing to be observed is that the tendency to constant development remains wholly unabated. All the yards in ship-building countries grow busier yearly. Comparing the tonnage lost every year with the tonnage built, it is easy from the excess of the latter to infer the vigour of maritime enterprise. I spoke on the last occasion about the problem of England's coasting trade. As I anticipated, the exclusive policy then spoken of has not been carried out. Standing aloof from the current that affected other States, England remained calm and unmoved, not departing from the attitude that becomes such a great Power. Moreover it is to be noticed that the foreign vessels engaged in the carrying trade within the British dominions do not exceed ten per cent. of the British vessels. To revert to an exclusive system on account of this small fraction is a policy such as a great country like England will not adopt.

America's disposition to apply her strength to enterprises on the Pacific is a noteworthy phenomenon. The Great Northern Railway Company attaches much importance to future developments in the Far East, and, apart from the question of present gain or loss, is devoting its whole attention to its maritime connexions on the Pacific. The immense improvements it is so earnestly making in the quality of its ships has reference doubtless to the time of China's development. The American navigation-encouragement project of law is an old question. The members concerned have submitted it to the Diet and now, hoping to get it passed, are working very hard. As it happens, however, to be just the time of the Presidential election, the bill may probably be entrusted to a committee or tabled. Still that the date of its passing is not far distant may not be doubted.

Germany seems to have made a change with respect to Far Eastern navigation in the scheme of distributing her ships. Formerly her S.S. Companies made it a rule to employ their newest and largest vessels on Far Eastern lines, but of late they have gradually changed them for small ships. Probably they have adopted that course because there is no necessity to employ big vessels on these routes.

Russia, as I have often previously remarked, bent on having a complete line of communications by sea and land between Europe and Asia, is employing her strength to augment her Far-Eastern maritime services which connect with the now-completed Siberian and East-China Railways. The East China Railway Company, during the past two or three years, has had from 10 to 20 vessels plying in Far-Eastern Waters, and although the Company is re-

ported to be making a yearly loss of tens of thousands of yen, the increasing vigour of its enterprise is probably inspired by the hope of success in a distant future.

While America, Germany and Russia, countries of recent maritime development, are devoting their most earnest attention to the navigation of the Pacific, the Nippon Yusen Kaisha of Japan, which stands in their midst, is determined that it will soon take steps to enhance the prestige of its maritime enterprise on the Pacific. If any one encroach upon our lines, we will oppose him to the last. Moreover, we will proceed to take what we ought to take. Above all in the direction of China and Korea, we will pay more attention than ever to our services, and we venture to hope that we shall not be left behind by any. In the case of the lines traversing China from north to south, the Lu-Han Railway, the Yeh-Han Railway and the Tsin-Chin Railway, which the various Powers have taken in hand and which are gradually advancing towards completion, and in the case of the Korean lines, the Seoul-Fusan and the Seoul-Wiju, which are nearly finished or are about to be built, the Nippon Yusen Kaisha must be prepared to take its part in providing maritime machinery to establish connexions with these land facilities.

I wish to take this opportunity of alluding to a matter that has given me some thought. We have of late heard the doctrine advanced that the foreign services maintained by the country's assistance, that is to say, by funds for the encouragement of navigation and shipbuilding and by subsidies, are unnecessary; that they should be abolished; that the money spent on them is too large and should be reduced; nay even that in order to meet the deficiencies in the Government's annual budget the subsidies paid to the Nippon Yusen Kaisha should be cut down or abolished, and that the authorities, entertaining that idea, will submit to the Diet a bill for the purpose. Such statements are merely those of persons unacquainted with the circumstances, but since among you shareholders, gentlemen, there may be a disposition to feel concerned about these things, I wish to offer my views for your consideration.

Matters relating to navigation encouragement, ship-building encouragement, and subsidies for services, have already been embodied in laws or have been the subject of agreements between the persons concerned and the Government. To abolish these arrangements prior to the termination of the fixed period or to cut down the amounts would be a serious matter. Should the proposed abolitions or reductions take place, the persons who, sinking large sums of capital, taking great risks and incurring unspeakable trouble, have engaged in this enterprise, would be doomed to grave misfortune. Of course, if there be no practical necessity for these enterprises, then it is desirable that at a moment like the present when the State's finance is not too flourishing, they should be abolished and the money devoted to meet essential outlays. But how is it to fare with agreements made as the result of laws? The suffering and loss that would be inflicted on those concerned must be immense. Should the Government adopt such a course, shipping folks would have to determine how to deal with the situation. Presumably the enactment of the navigation and shipbuilding encouragement laws was designed solely to promote maritime enterprise and make ship-building independent. How it might have been in the days of national seclusion I do not know, but now in the days when cosmopolitan Japan has to take her place side by side with other nations, it is absolutely necessary that protection and encouragement should be given to maritime enterprise which is most essential as providing a reserve for the Navy and wings for the army. The Government taking that view introduced the above projects of law, and the Imperial Diet, in spite of their very considerable bearing on the national finances, approved them, and we all remember how vividly the world's attention was attracted by this procedure on the part of the Government of a maritime country and the people of a maritime country. These laws for the encouragement of navigation and ship-building, Laws No. 15 and No. 16, were promulgated in March 1896, and the duly fixed amounts of encouragement money having then become payable to persons who, being Japanese subjects, built with Japanese capital ships that satisfied the prescribed standards, and to persons who conducted maritime services between Japan and foreign countries with these ships, companies and individuals who contemplated engaging in such undertakings, set to work to build vessels of the prescribed standard or to buy them, so that maritime enterprise thenceforth received an extraordinary impetus in Japan. Statistics show that since the year of promulgation of the above laws the increase of Japanese-owned steamers of 1,000 tons and upwards has been as follows:—

	Steamers.	Tons.
1896	126	265,696
1897	140	321,980
1898	144	357,085

1899	148	382,400
1900	159	410,537
1901	170	441,639
1902	182	469,863

Thus in the space of 6 years subsequent to the promulgation of these laws, the number of steamers increased by 56 and the total tonnage by 204,167 tons, the latter figure being an increase of 78 per cent. Nor is it in the matter of numbers and tonnage only that progress has been marked. There has been a corresponding development in the quality of the vessels and in the processes of construction. The following table will show how many ships have been built so as to satisfy the requirements of the above two laws:—

	Ships that satisfy the legal standards.	Tonnage.
1896	1	3,967
1897	15	68,683
1898	27	126,195
1899	29	133,733
1900	34	162,651
1901	44	184,420
1902	43	187,000

This table indicates an increase of over 180,000 tons in six years, which was plainly the result of the laws for the encouragement of navigation and shipbuilding: a result that might well astonish Europeans and Americans, themselves in the van of maritime enterprise.

Proceeding now to divide the above 43 steamers into the two classes of those employed on specially contracted lines and those working under the ordinary provisions of the encouragement law, we find that there are 29 steamers, of an aggregate tonnage of 140,254 on the special lines, and 14 steamers, aggregating 46,746 tons, on the ordinary lines. Again, the ownership of these various vessels is as follows:—

Steamers on Specially Contracted Lines.

	Ships.	Tons.
Nippon Yusen Kaisha	18	105,892
Toyo Kisen Kaisha	3	18,644
Osaka Shosen Kaisha	7	14,118
Oya Shichihei	1	1,669

Vessels on Ordinarily Assisted Lines.

	Ships.	Tons.
Nippon Yusen Kaisha	5	24,155
Mitsui Bussan Kaisha	5	13,635
Mitsui Bishi Goshi Kaisha	3	7,287
Osaka Shosen Kaisha	1	1,669

It will thus be seen that the steamers employed on services receiving assistance under the general provisions of law aggregate only some 46,000 tons, and there is not a great tendency to increase in this direction.

If we now turn to the question of the amount paid by the State on account of these three funds, encouragement of navigation, encouragement of shipbuilding, and subsidies, it appears, according to the latest statistics, that the sum defrayed annually by the Treasury is a little over 8,491,400 yen. This total is allotted as follows:—

SPECIALIZED SUBSIDIZED SERVICES.

	Yen.	
Nippon Yusen Kaisha—		
European Line	2,673,894	
Seattle Line	654,030	
Australian Line	525,657	
Bombay Line	178,785	
Services in Far-Eastern and Domestic Waters	550,000	4,582,366
Toyo Kisen Kaisha—		
Hongkong-San Francisco Line	1,013,880	1,013,880
Osaka Shosen Kaisha—		
Yangtze Line	354,942	
Formosa and South-China Lines	574,404	
Kobe-Korea Line	37,168	966,514
Oya—		
Japan-Sea Line	140,000	140,000
Daito Kisen Kaisha—		
Shanghai-Suchow-Hanchow Line	57,873	57,873

There are also some subsidized services in Hokkaido

NAVIGATION ENCOURAGEMENT FUNDS.

Nippon Yusen Kaisha	703,806
Mitsui Bussan Kaisha	178,089
Mitsui Bishi Goshi Kaisha	24,308

SHIPBUILDING ENCOURAGEMENT FUNDS.

Mitsui Bishi Zosen-jo	383,674
Osaka Tetsuko-jo	89,935
Kawasaki Zosen-jo	68,645
Ishikawa Zosen-jo	38,840

Certainly the sum of 8½ million yen disbursed in accordance with these three laws is not small, but if we compare it with the results achieved in the past

six years, the increase of new steamers, the consolidation of lines of maritime service and the establishment of the building industry, we can not but feel that a large acquisition has been made at a small cost. Six years ago we did not even obtain a place in the nations' register of tonnage, yet in Lloyd's Tables issued in England last July, Japan figures as the owner of 500,000 tons, and stands ninth in order of magnitude, being preceded by England, America, Germany, Norway and France, and followed by Russia and Spain. Again, with regard to countries possessing vessels of 12 knots speed and upwards, Japan has leaped to the fifth place, being surpassed only by England, America, Germany and France. Nor is that all. Six years ago, virtually no ship-building enterprise was to be seen in this country, whereas to-day yards at Nagasaki, Kobe and elsewhere have come to be able to build big ships. Not only is it no longer necessary to send orders abroad for vessels of 5,000 tons and upwards, but any man-of-war also can be built without difficulty: remarkable progress it must be admitted. Considering again the consolidation of services that has resulted from the special subsidies received by the shipping companies under contract with the Government, we find that it is a feature of this development and progress worth special attention. Of course the increase of big vessels and the growth of the shipbuilding art are matters for sincere congratulation, but without the consolidation of services the greater part of these advantages would be sacrificed. Thus the law for assisting navigation has worked in combination with the other two laws to perfect the development of maritime enterprise, and the consequence is that the maritime enterprise of Japan, which, six years ago, was confined within the small limits of domestic waters, China and Korea, has now been extended to the face of five continents, and our lines in foreign seas have obtained a firm place from which they are not to be ousted. This is the result of extending abroad our fixed-period lines, and that the foresight of our Government and of the Diet has been justified by events can not be doubted. Neither can it be questioned that the idea of creating a powerful machine which should serve as a reserve and as a means of transport for an armed country has been virtually achieved.

Such are the views I entertain as to the need of the above three laws to our country economically and in a military sense, and as to whether they have achieved their purpose by satisfying that need. I now turn to the question of what benefit has been conferred on the country by the operation of the over-sea lines developed under the provisions of the three laws, especially the law for assisting navigation. It would be difficult to enumerate all these benefits so wide are their limits, but in the first place it is undeniable that the rates of freight for merchandise at home and abroad have been lowered. When Japanese lines of steamers were opened in foreign waters, it was quite inevitable that they should come into competition with other companies, and the cost of carriage being thus gradually lowered, cheap Japanese goods found their way little by little to foreign markets, and cheap foreign goods, in turn, came to Japan. To cite a few examples connected with the Nippon Yusen Kaisha. There has been a marked fall in the freight of fancy matting and miscellaneous articles carried by our American line, with the result that the export has increased conspicuously. Again, in the case of raw silk and tea, great staples of export, a similar lowering of freights has been attended by a considerable development of export. Thus since the American line was opened seven years ago, an estimate of the benefits it has conferred on shippers would show very large figures. Simultaneously, the import of American products into Japan, as timber, salt-salmon, and so forth, has been facilitated. By the Australian line, again, the export of sulphur and matches has been developed and the import of lead, fertilizers and such things has been made easier. It is further obvious that similar advantages may be attributed to the European line. Specially conspicuous in that respect is the Bombay service. When it was opened the rate of freight for raw cotton was 17 rupees a ton, but by means of the Company's ships it has been gradually reduced until it now stands at 10½ rupees. In that way the money saved in cotton freights alone from 1894 to 1902 aggregated 2,547,236 yen, and the assistance thus rendered to the development of the cotton-spinning industry of Japan has been very large.

It is not only shippers of goods that have benefited by reduced rates. Passengers equally have felt the effect of the reductions brought about by the Company, and since the latter inaugurated its cheap services abroad, great convenience has been afforded to Japanese travelling to foreign countries, while at the same time the number of foreigners voyaging in Japanese ships has increased yearly. That has been the case conspicuously with Japanese emigrants proceeding to Australia and America. The direct and indirect benefits derived by Japan from all these comings and goings can not have been inconsiderable.

Speaking of the subject of the development of trade and the increase of commercial carrying facilities, it is to be noted that Japan's foreign trade increased 83 per cent. in the interval between 1896 and 1902. The figures are these:—

	yen.
Foreign Trade 1896	280,517,235
" 1897	382,435,849
" 1898	443,255,909
" 1899	435,331,820
" 1900	491,691,840
" 1901	508,166,188
" 1902	530,031,323

This table shows that the increase in 1902 as compared with 1896 was 240½ million yen. Such rapid growth was of course not due solely to the benefits of maritime enterprise, but that the establishment of regular and efficient over-sea services with cheap rates of freight contributed materially to the result, can not be doubted.

In the next place, if comparison be made of the carrying capacities of foreign and Japanese ships engaged in the transport of exports and imports, the difference between the figures for 1896 and for the present time is remarkable. Thus:—

CARRYING CAPACITIES IN 1896.

Japanese ships	11.47 per cent.
Foreign ships	88.53 per cent.

CARRYING CAPACITIES IN 1902.

Japanese ships	39.23 per cent.
Foreign ships	60.77 per cent.

Further, whereas the volume of goods carried by Japanese steamers more than sextupled during the above period, the volume in the case of foreign vessels increased by only 30 per cent. or less. Thus whereas ten years ago goods for Japan were imported solely in foreign bottoms, something less than 40 per cent. of the whole now come by Japanese ships. That is the advantage wholly of opening over-sea lines, or, to go a step further back, it is the effect of the law for assisting navigation.

Comparing the carrying capacities of the several Japanese shipping companies, we have these figures:—

	Ships.	Tons.
Nippon Yusen Kaisha	37	168,348
Osaka Shosen Kaisha	21	32,054
Mitsui Bussan Kaisha	7	20,053
Toyo Kisen Kaisha	3	18,644
Mitsui Bishi Goshi Kaisha	3	7,286
Oya Shichihei	3	5,163
Totals	76	251,548

These figures show that the Nippon Yusen Kaisha has 66.9 per cent. of the carrying capacity and the other companies 33.1 per cent.

With reference now to the question of drawing specie to the country, the sums which used formerly to be paid away as freight charges to foreign vessels are now paid to Japanese vessels, and reach a very large amount. Nor is it that Japanese ships merely draw to Japan a part of the freights connected with the commerce of this country itself, they also earn a considerable sum for the transport of foreign goods and foreign passengers. Last year the gross income of the Nippon Yusen Kaisha's over-sea lines on account of goods and passengers was 12,632,400 yen, and its outlays abroad on account of its branches, agencies and ships' expenses aggregated 6,330,100 yen, so that the difference, or 6,302,300 yen, represents the amount of specie drawn to Japan in one year. From this point of view alone it is evident that the figure of 5 million yen, which, as I have already stated, the Company receives from the State, is more than returned.

Summing up these reflections I believe that whether the question be considered in its relation to the country's needs, or whether it be considered in relation to her advantage, the laws providing for State aid to maritime enterprise are well suited to the time, and their results have not disappointed the hopes of the Government and of the Diet.

If, now, we take some examples from the case of countries standing foremost in maritime enterprise, we find that England, long renowned as the Queen of the Ocean, England that has attained a degree of maritime greatness unparalleled in history, still does not abolish the system of State aids. The names she applies such to aids are various, as "bounty," "subvention," "subsidy," "remuneration" and so on, but it is beyond discussion that all alike are aids. Thus the sum she pays yearly for the carriage of mails is 7,857,680 yen, and last year she entered into an agreement to pay the Cunard Company 1,500,000 yen annually, so that she spends in all 9,357,680 yen. France gives on account of the mails 10,472,712 yen, and for the encouragement of navigation 6 millions, so that her total disbursements on this account come to the large figure of 16,472,712 yen. Then as to Germany, she gives to the Atlantic and Far-Eastern services 3,900,000 yen, and further she reduces the

fares on goods carried by her State railways for shipment in her ocean-going vessels, besides which she remits import duties on materials for ship-building, so that altogether the indirect assistance given by the State is not small. Russia grants extraordinary advantages by way of assisting maritime enterprise. Thus since the beginning of the year, she lends for a period of 20 years without interest one-half of the money spent on ship-building in domestic yards. Further the State itself insures the ships to the extent of two-thirds of their value at the low rate of 2 per cent., and if they use Russian coal the Government puts up one half of the price, while should they pass through the Suez Canal the State pays the Canal dues. These are Russia's signal measures of aid. Their result has not yet produced any effect on the world's maritime carrying trade, but protection on such a liberal scale is probably without precedent.

Comparing now the subsidies given by the leading European countries on account of the carriage of mail matter to the East, we find that England pays to the Far-Eastern and Australian services of the Peninsular and Oriental Company a sum of 3,300,000 yen annually; France pays to the Messageries Maritimes on account of its East-Asian and Australian lines 3,676,640 yen yearly; Germany pays the North German Lloyd for its East-Asian and Australian services 2,800,000 yen, while the Nippon Yusen Kaisha gets 3,199,551 yen on account of the European and Australian lines. It can not be said in view of these figures that the Yusen Kaisha receives an excessive subsidy. There may indeed be some who think that the amount is more or less but of proportion to the country's financial strength, but considering that Japan has only lately engaged in maritime enterprise and that she has to hold her own against strong competitors, this measure of State aid must be called inevitable.

What I should like to draw general attention to is the distinction between protection given to a company and aid given to an enterprise. In the early days of its existence the Yusen Kaisha enjoyed the privilege of having the State make good the difference between its profits and 8 per cent. of its capital. That was protection given to a company. It enjoyed that benevolence during 15 years from the time of commencing its career, but no matter what deficiency in connection with its business may now arise, it has no right to complain to the Government. In other words, the assistance it now receives is not in the nature of protection of the Company, but is simply aid for its enterprise. Not merely the Yusen Kaisha but any person whatsoever that satisfies all the conditions prescribed in the laws and regulations enacted by the Government, can receive this aid or encouragement, and thus the present system is to be regarded simply as one of aid to the enterprise of maritime transport. Hence it follows that from the morrow of the period fixed for granting the aid, there may be a diminution of the amount or it may even be totally abolished. That is a matter beyond the range of present prescience. Therefore it follows that from this time forward the foundations of the Nippon Yusen Kaisha must be made as solid as possible, and in order that hereafter we may not be thrown into a state of perturbation by such happenings as those I have just alluded to, we must do everything in our power to improve our business, must strive to extend it, and must effect such preparations as will enable us to carry on our enterprise without interruption even though the Government reduce the amount of our subsidy. Of course there is no possibility of abolishing subsidies and encouragements and at the same time keeping up our foreign services, so that some expenditures on this account may be said to be inevitable in the case of the Empire of Japan which has thrown open its doors. Nevertheless the State's policy, as far as possible, should be one of compensation for services rendered, not a policy of benevolence. For my own part I have no desire for benevolent assistance, and I should hope that those engaged in this enterprise will make up their minds to carry on their business by their own strength to the utmost limit of their capacity. But as for reduction or abolition of State aids before the termination of the periods for which they were granted, neither the Government nor the Diet of this country will ever have recourse to such inconsiderate procedure. After the expiration of those periods, it will of course be within the competence of the Government and the Diet to make either increases or reductions; but whether those engaged in the enterprise will agree or not to such changes, that, again, will rest with their own volition.

I have taken the opportunity to express these views merely for your consideration.

Two coolies quarrelled on the night of Dec. 1st at Kitamoto-cho, Asakusa, Tokyo, and one was killed, being stabbed in the throat and breast. The culprit escaped.

THE LAW COURTS.

THE ALLEGED SILK FRAUDS.

The trial of Messrs. A Le Prevost and C. Bremer and three Japanese, who are associated with them in the charges now under prosecution, was resumed on Friday. The Judges and Counsel were as before. On Wednesday the Presiding Judge had intimated that the Court would sit on Friday, *sehi* at 9 p.m. It was 10.15 before the Court assembled.

The Presiding Judge read a letter from Dr. Eastlake intimating that in consequence of deafness he could not continue to act as interpreter. His Honour said he understood Counsel had obtained the services of another interpreter to assist the Court interpreter.

Mr. Kishi said they had secured Mr. Obata Kiugoro of Aoyama Gakuin, Tokyo.

Mr. Obata came forward and being duly instructed by the Judge signed the declaration.

Carl Bremer was recalled, and again the Presiding Judge requested both interpreters and witnesses to speak loudly, himself setting the example.

Examination continued: In the beginning of 1896 I established myself in Japan. I took over Harperink and Smith's connection with the goodwill of Fraser, Farley & Co. in January, 1901. The relation is between Fraser, Farley & Co. and Harperink and Smith.

It is not between C. Bremer and Harperink and Smith?—It comes to the same thing, as I am the sole proprietor of Fraser, Farley & Co.

Were Harperink and Smith customers of Fraser, Farley & Co. before you acquired the latter?—Yes.

When did the relations between your firm and Mollison & Co. begin?—In April last year. Mollison & Co. were formerly customers of Cornes & Co. Mr. Mollison had heard from Le Prevost that he intended joining Fraser, Farley & Co. later on. Therefore after consultation with Le Prevost he decided to buy from Fraser, Farley & Co., and so not break the connection. (This was misinterpreted by Mr. Obata, and Mr. Kishi, with the permission of the Court, got the witness to say it over again with details, but His Honour ordered the Court Interpreter to take up the duty). It was Mollison & Co. who wanted to do business with Fraser, Farley & Co. Mr. Mollison did so because he knew that Le Prevost who had bought for him before was to join Fraser, Farley & Co. and he wished to have no interruption in his business and decided to give his orders directly to Fraser, Farley & Co. This was after Le Prevost had given notice to Cornes & Co. Before he left Cornes & Co. Le Prevost made his intention to do so known to Mollison & Co. and other customers. It was before Le Prevost left Cornes & Co. that Mollison & Co. made this decision. Mr. Mollison and Le Prevost had consulted about it.

Have you not expressed the intention to have the business of Mollison & Co. transferred to Fraser, Farley & Co.?—Yes, I was glad to get the business.

Did you not express your intention by which that arrangement was arrived at?—It was not I first. As I say, after consultation with Le Prevost, Mollison & Co. decided to transfer their business to Fraser, Farley & Co.

Counsel interposing, Mr. Obata took the interpreting and asked: Was there an occasion when you first asked Mollison or Mollison first asked you?—Neither. Le Prevost told me of it, and next time I saw Mr. Mollison I told him I would be very glad to have his orders. Mr. Le Prevost told me in the same way that Dent & Co. wished to transfer their business and buy from Fraser, Farley & Co. (This answer had to be repeated by the witness at the request of Counsel). Dent & Co. had orders to give which had formerly gone to Cornes & Co. and they arranged to give them in future to Fraser, Farley & Co. I merely accepted the proposal made to me that Fraser, Farley & Co. should execute Dent & Co.'s order. It was on the suggestion of Le Prevost. I had known that Dent & Co. did business with Cornes & Co. The relations with Dunlop & Co., Rangoon, began in April or May, or perhaps

earlier in 1902. Le Prevost advised me to make telegraphic firm offers to Dunlop & Co. I did so. ("telegraphic firm offers" quite puzzled the interpreter and he translated it *dempo utte shigoto wo sasetai to*, etc.).

Mr. Kishi insisted that the words "firm offer" should be given to the Judge—but eventually the phrase became *uri komi chumon*, or something of the kind.

The Court interpreter amended this slightly.

Examination continued—I got orders from Dunlop & Co. I presume there had been correspondence between Dunlop and Le Prevost. A few cases were sent as samples to Bigbee & Co. early the same year. That was the first of my relations with them. Le Prevost asked me to send a shipment to them. I do not know how he knew them. He did not ask me as agent, but advised me to send samples. It was not in execution of an order. Kahn & Kahn had given notice to Cornes & Co. that they would find an open market and not confine themselves to Cornes. Le Prevost told me of this, and advised that firm offers should be made to them by me.

The witness was examined as to rates of exchange, and various books were produced for him to look at, but he said that without the draft book he could not explain the matter easily. In individual cases he could do so. A case was given to him and he explained the manner in which the draft was made. He said the exchange rate there, 211½, was the contract rate with the broker who sold the draft to the bank. He called for the exchange book, but it could not be found. Not only in a transaction with Harperink and Smith pointed out to him, but in every instance the way in which the exchange was arrived at was clear. If he could not explain the matter, it was because there were books not produced which he required.

Examination continued: I had been in treaty with Le Prevost to join Fraser, Farley & Co., but no arrangement was made. There was no contract nor promise that Le Prevost should work with me under the name of Fraser, Farley & Co. I made no arrangement by conversation and I made no firm promises. I was in negotiation with Le Prevost. I had the intention that he should work with me—make some combination or some satisfactory arrangement with me after he left Cornes & Co. The conditions of such arrangement had not yet been fixed. The discussion about future arrangements was not finished at all. There were several proposals made to me, but I had not accepted any. He proposed either to become a partner in Fraser, Farley & Co., or to establish himself and have me join him with capital. He meant by the latter to establish himself under his own name. The original idea was that he should join Fraser, Farley & Co. but no terms had been fixed. I understood that he was to become silk manager. There was no question of partnership at all—only his partnership in the silk business. Nothing was fixed. I could not come to terms with him before he left Cornes & Co. I do not think it would be wrong to make a contract with him while he was with Cornes & Co.

The Court rose a few minutes after noon.

The Court sat at 2.35 p.m.

The Judge stated that the three Japanese accused were to be examined in the afternoon.

Mr. Uzawa, one of the Counsel, stated to the Court that Mr. Takagi, counsel for Sawada, was absent because of illness and asked the Court to postpone the examination of Sawada, to which request the Court acceded.

Nishida was then called forward. He stated that he was engaged for about ten years at the offices of Messrs. A. S. Rosenthal & Co., No. 48, Messrs. Cornes and Co., No. 50, and Messrs. Fraser, Farley & Co., as silk goods buyer or inspector, until he left the office of the last named in April, 1902. When he was at Messrs. Rosenthal & Co.'s, Mr. Le Prevost was also employed there. After Mr. Le Prevost left the firm and joined Messrs. Cornes & Co. the accused followed him. The accused also attended in his new position to the duty of silk buyer or inspector. Mr. Le Prevost was manager of the silk department of Messrs. Cornes & Co. The accused, besides the duty of purchasing and inspecting silk goods, attended to such work as

the examination of packing, etc., in the godown. In January, 1901, he was employed by Messrs. Fraser, Farley & Co. by Mr. Bremer who asked him to join that firm. He was acquainted with Mr. Bremer from the time when he was employed by Messrs. Cornes & Co., where Mr. Bremer called very often to see Mr. Le Prevost. The witness did not know whether Le Prevost and Bremer entered on negotiations to start business themselves jointly. He had heard that Mr. Le Prevost would resign from Cornes & Co. and would enter into a combination with Mr. Bremer. The salary of the witness was *yen* 100 at the office of Messrs. Cornes & Co. It was increased to *yen* 150 at the office of Messrs. Fraser, Farley & Co. When he joined the latter firm, there was there Maidzumi, a Japanese assistant. Later two other men were employed by the firm. Maidzumi was the bookkeeper and accountant of the firm. The witness thought that Messrs. Fraser, Farley & Co. had been carrying on business before he entered their service. Mr. Bremer very often purchased silk goods from Messrs. Cornes & Co. through Mr. Prevost, which goods the former exported. When accused entered the service of Messrs. Fraser, Farley & Co., there were not many Japanese assistants. He principally attended to the purchase of silk goods from Japanese merchants and inspected them. As to goods purchased from Messrs. Cornes & Co., Mr. Bremer dealt himself in the matter of inspection, settlement of price, etc., so that the accused did not interfere. Mr. Le Prevost almost always was calling at the office of Messrs. Fraser, Farley & Co. where he seemed to interfere in the business of the firm, so that the accused was some times compelled to ask him about the price or quality of silk habutae. The accused did not know any reason why Mr. Le Prevost was always interfering in the business of his firm. He did not know anything that had been going on in the office because he was during almost all the business time in the silk room provided in the godown. There was no foreign firm which supplied silk goods to foreign exporters; Messrs. Cornes & Co. was the only firm to do it. The transactions between Cornes & Co. and Fraser, Farley & Co. were directly conducted. The witness did not know whether the business between the two firms had been carried on under the name of Yoshikawa or Sawada, but he heard afterward some fact like that. Of course he never saw any business books, as his duty did not require him to do so, so that he could not understand in what way the goods purchased and sold were entered into the books. After Shirai was employed by the firm as assistant, Okazawa and about ten others were also employed during the period from May to August. They were all employees of Messrs. Cornes & Co. and some of them were recommended by Mr. Le Prevost and some by the witness. The business of the firm was greatly enlarged so that it was necessary to have such persons. Mr. Le Prevost came very often to the office of Messrs. Fraser, Farley & Co. as was already stated, and was giving advice to Mr. Bremer in the business. Sometimes Mr. Le Prevost stayed a short time; sometimes he stayed for many hours. Mr. Le Prevost had provided a desk in a room of the firm. In June or July, Mr. Walker joined the firm as silk goods inspector. Witness thought that Mr. Bremer was always asking Mr. Le Prevost about business matters, but the latter was not an employee. Witness did not know whether Mr. Le Prevost had used the name of Messrs. Fraser, Farley & Co., but he did know that Mr. Le Prevost had often signed godown delivery orders. Witness thought that Mr. Bremer had instructed Mr. Le Prevost to sign such orders. Maedzumi was accountant and cashier and was paying money needed in the office. Later some portion of his duties were transferred to Okazawa and others. He did not think it strange that Mr. Le Prevost should often visit the office of Messrs. Fraser, Farley & Co. and even work there while he was employed by Messrs. Cornes & Co. Witness did not know any thing about the accounts; he simply understood that much of the merchandise was purchased from Messrs. Cornes & Co.

Okazawa, another of the accused, was next examined. He deposed that he was a graduate of the Tokyo Commercial College. With a recommendation from Mr. Le Prevost, he went to Fraser, Farley & Co. from Cornes & Co. During the period from the summer of 1900 to the summer of 1901 witness assisted in settling the books of the department, in which work he was one night in July at the silk department of Messrs. Cornes & Co. where Mr. Le Prevost and four Japanese including witness were present. Later, they worked at the private residence of Mr. Le Prevost and the witness remembered that work was resumed on two or three occasions. There the good stock, merchandise, purchase, invoice books, etc., were dealt with. When they were settling the books in good order at the silk department, Mr. Weale came in and was angry with the night work so that after that they removed their business to the house of Mr. Le Prevost. He did not mean that there was intention to conceal the work from Mr. Weale.

Being shown a book, Witness stated that it was written up by him or by other Japanese clerks. Pages No. 7, 8, 9, 40 and others the witness had entered. By means of this book witness could not find from whom the goods had been purchased or to whom sold.

Witness then explained details as to the calculation of invoices. He stated that sundry charges for packing were made at an average rate according to the usual way, upon which telegraphic charges, marine insurance, freight, bill brokerage, and commission were added, making the total sum of the invoice, of course including the cost of the merchandise. A draft had then to be drawn against the invoice. The various charges had to be entered into ledgers under a separate account heading.

The Court then rose, adjourning till Nov. 30th at 9 a.m.

The trial of Messrs. A. Le Prevost, Carl Bremer, and three Japanese was resumed on Nov. 30th at 10.10 a.m. in the Yokohama District Court before Presiding Judge Watanabe and two associates, and Public Prosecutor Nakamura.

Sawada, one of the accused, was examined. He stated that he had been employed by Messrs. Rosenthal and Co., No. 48, but left them in June or July, 1895, and entered the service of the silk department of Messrs. Cornes and Co. on the recommendation of Mr. Le Prevost. Mr. Le Prevost had been formerly employed by Messrs. Rosenthal & Co. and he removed to the office of Messrs. Cornes and Co. about half a month before witness did. Witness did not know why Mr. Le Prevost changed his position, but believed his new post was better than that at Messrs. Rosenthal & Co. because he was manager, presiding over the whole business of the silk department. Mr. Le Prevost was always purchasing and selling habutae silk in his own way and witness was a bookkeeper and cashier. Witness was keeping the ledger, journal and day book, etc. At the commencement of his employment with Messrs. Cornes & Co., the monthly salary of witness was *yen* 70. Kojima, a Japanese cashier, had attended to the silk department before witness entered the service, but later he was discharged. Mr. Le Prevost employed Matsumura in the silk department as a banto for purchasing silk goods. Later, Nishida and a few other Japanese assistants were engaged. Witness was cashier in the silk department and his duty was to pay or receive cash. A necessary amount of money was always kept in the department under the supervision of Mr. Le Prevost. There was no limit as to the amount of money to be kept in hand. In case the money was insufficient, witness spoke to Mr. Le Prevost about the matter and Mr. Le Prevost drew on Messrs. Cornes & Co., who transferred immediately the required money by cheque drawn in favour of Mr. Le Prevost. This was the usual procedure with reference to money matters between Messrs. Cornes & Co. and their silk department. Under these circumstances, sometime an amount of *yen* 1,000 and sometimes more than *yen* 10,000 was kept in the silk office. When witness entered the silk department, the business was on a very small scale. The business and the

cash transactions gradually extended and consequently a large amount of money was sometimes held in the silk department. If the money was not needed in the silk department, it was immediately transferred to the head office. Witness was authorized by Mr. Le Prevost to manage the cash in his own way. The head office did not understand anything with regard to the department's money transactions, until a settlement of account was made out by means of a balance sheet, which was generally made up in September every year—or sometimes in March or May. Of course, monthly trial balance-sheets were made and presented to Mr. Le Prevost. The ledger showed the results of the business done, and entries were made every month after collecting the various results of the business from several books entered by other assistants in the previous month. The merchandise book did not show from whom the silk goods were purchased or to whom they were sold. The transactions between Messrs. Cornes & Co. and Messrs. Fraser, Farley & Co. were made in the names of Sawada or Yoshida, silk brokers, and witness did not know any reason why their names were used, even why business was not done through the hands of other brokers. Mr. Le Prevost ordered witness to make the entries in the books using the names of the brokers. There were distinctions used between the account of Yoshikawa which were determined by the nature of the business. Witness had not been known by Mr. Le Prevost to make discrimination as to the names of either Sawada or Yoshikawa before making the entries in the books, for he always asked Mr. Le Prevost or Okazawa of Messrs. Fraser, Farley & Co., to confirm which name was to be used. Witness was sometimes justified in entering the name of Yoshikawa or Sawada with regard to a transaction, by seeing cheques from Messrs. Fraser, Farley & Co. Such cheques were made payable to one or other of the brokers. Witness thought that this method of business in the using of the names of brokers in transactions between two foreign firms a little strange, but it was not entirely rare. Messrs. Cornes & Co. also used the name of Sh. Manabe, a silk broker living in Fukuoka, when they sold, a few years ago, a certain quantity of habutae to Messrs. Strome & Co. After a pause, witness stated that this transaction was not with Messrs. Strome & Co., but with Messrs. Simon & Co., near Hanazono bridge (No. 254). Witness did not know any reason why the name of a broker was used in the transaction, but thought it was to conceal some disagreeable appearances. The witness did not know anything about the relations between Messrs. Le Prevost and Bremer, but he heard in May or June, 1901, that Mr. Le Prevost would leave the silk department of Messrs. Cornes and would continue in the silk trade elsewhere. About July 29th or 30th 1902, Messrs. Fraser, Farley and Co. paid a big amount of money to the silk department. Witness remembered it to be about *yen* 40,000 for silk sold by the latter through Yoshikawa or Sawada. This money was transferred by the silk department to the head office on July 31st. Some books, including the merchandise book, were examined to settle things in good order in July, at the house of Mr. Le Prevost, where the witness, together with other Japanese assistants, was present. The work took three or four nights. All books containing entries for two years before September, 1901, had not been settled in good order, so that the balance of stock was obscure, that is to say, it was miscalculated and as a consequence caused further complications in transactions and entries after September, 1901. The merchandise book showed only the gross effect of profit or loss. After the investigation of the books Mr. Le Prevost found a great loss, but the loss was not a real loss. The apparent loss seemed to arise simply from the incomplete state of the books prior to September, 1901, and upon the estimated value of the goods left in stock valuation of which was made in accordance with market fluctuations. The reason they examined the books at the house of Mr. Le Prevost, witness thought, was that he preferred to do the work in a calm place. To Yoshikawa and Sawada, the brokers, commu-

sion was paid for using their names in transactions between the two firms. Messrs. Fraser, Farley & Co. paid it but not Messrs. Cornes & Co., though the latter were the sellers and in the nature of business should have paid it.

Mr. Le Prevost was now called to the stand, when Mr. Kishi, one of the Counsel, asked the Court to adjourn the hearing on the ground that the foreign defendant did not understand the statements made by the three Japanese accused and wished to have them interpreted, otherwise, the foreigner would be subjected to the utmost inconvenience. The other lawyers supported Mr. Kishi, and the trial was adjourned till Dec. 2nd at 9 a.m.

The Court rose at 11.15 a.m.

In the Yokohama District Court, the trial of Messrs. A. Le Prevost and C. Breiner and three Japanese—T. Sawada, Y. Nishida and K. Okazawa—who are alleged to be involved in silk frauds, was resumed before presiding Judge Watanabe and two associates, and Public Procurator Nakamura on Wednesday the 2nd Dec.

Mr. Akiyama and other lawyers employed in the defence were present as usual.

The Court sat at 10 a.m. instead of 9 a.m. which had been fixed at the time of the previous hearing.

At the outset Mr. Yano, one of the Counsel, asked the Court to confirm a point in the evidence given by Sawada, one of the Japanese accused, in the last examination on the ground that the statement seemed to be indefinite. The Court replied that the point would be cleared up in further hearings.

Alfred Le Prevost was called, Mr. Obata setting as interpreter, and stated: I have never been sentenced under Japanese law for any crime. I came to this country in 1888. I paid a visit to Europe and America in 1895-6. I came here first under engagement to the *Japan Gazette*. My engagement was that of manager. In 1889 I changed my occupation and took up the silk business. I had no previous intention of entering the silk business. I had had no training for a mercantile life.

What kind of training have you received?—The ordinary English education.

Does that mean the common education?—Well, it is not systematised as on the continent, so it is difficult to say. Before coming here I was editor of a newspaper in Shanghai. I engaged in no occupation in my own country. I was only engaged in one firm before joining Cornes & Co. I entered Rosenthal & Co.'s employment in 1889. I joined Cornes & Co. on June 1st, 1895.

What was your reason for leaving Rosenthal and joining Cornes?—I thought there were better prospects before me. I was quite certain that in Rosenthal's there was no chance of my obtaining a partnership, while in Cornes & Co. there had been several cases of employees being made partners.

Did you make application to Cornes & Co. when joining?—Yes, I applied to Mr. Till, the local partner. I took sole charge of the silk department in Cornes & Co. I did so from the outset. I was paid *yen* 500 a month at first.

Have you kept that position without change till the middle of last year?—Yes, with some change in terms. The first change was that I got 5 per cent. of the profits. Then from Oct. 1st, 1900, I ceased to receive any salary. I then received a third of the profits.

What was the reason of that change?—I was making so much money for the firm that I think Mr. Till and Mr. Cornes believed I would leave them unless they gave me a more substantial interest in the firm. When I went to them in 1895 the annual business was only half a million *yen*, and the profit was only between two and three thousand *yen*. In 1900 the turnover was three millions and the profit *yen* 62,000. The arrangement as to my receiving a third of the profits remained in force till I left. The second change as to my receiving a third of the profits arose from a conversation I had with Mr. Till who informed me that Mr. Cornes was willing to give me a quarter. Mr. Till sent for me and said he thought I would not stay unless my situation was

improved. He told me I was making so much money in the business that they felt I would not stay unless they gave me a substantial interest. I told him that I had intended to speak to him about becoming a partner, and I said I wanted a third of the profits. He wired to Mr. Cornes, who offered a fourth. I saw Mr. Till, who showed me the cables sent and received. I was much surprised to see that there was nothing about the partnership in the telegrams. Mr. Till used these words: "You know Mr. Cornes is a mean old devil. The first thing we have to get out of him is the interest. There will be no trouble about the partnership." Moreover, he said the then partnership would not expire till Sept., 1901. I told him I wanted to be sure about the matter, and Mr. Till gave me his word of honour that I would be admitted in the next partnership agreement. Until then he asked me to wait. When he told me I could rely on being made a partner in the following year I told him I would be satisfied with a third of the profits, to be afterwards made a partner with that interest. As to Mr. Cornes' offer of a fourth, I said I could not reduce my interest. I must say that it was on Mr. Till's advice that I stuck out for the third. He was very liberal-minded—much different from Mr. Cornes—and he said if I held out for it I would get it. That was how the change came about. Mr. Till suggested that I should go to London and discuss with Mr. Cornes details of my entering the firm as partner—the amount of capital I should put in. I pointed out that on a previous occasion the department had suffered during my absence, and that if I now went away I could leave no one in charge. Mr. Till said he would rather that I should go, but as he was going home shortly he would fix matters. Meantime, he advised me to write to Mr. Cornes. Unfortunately Mr. Till died off Shanghai on the way home. I wrote to Mr. Cornes, telling him what had passed between Mr. Till and I, and leaving it to him to settle the terms of the partnership contract. Mr. Cornes replied that my letter was rather indefinite, that he did not think I would care to be a partner in the general business, of which I knew nothing. But he suggested separating the silk business from the rest and making it a limited liability company with myself as managing director. I took Mr. Cornes' letter to Mr. Jackson, Manager of the Hongkong and Shanghai Bank, for his advice. He thought it was a very good scheme—very favourable for me, and he advised me to go in for it. I wrote to Mr. Cornes outlining my ideas of the construction of the company. I proposed a capital of *yen* 200,000, or £20,000. The only objection Mr. Cornes had to my scheme was that I had set the capital too low. In any case he could not make the change until he had consulted and got the views of his partners in Japan. As I had written to him that I could not possibly stay with the firm unless something like this was arranged, I merely waited, thinking that Mr. Cornes was corresponding with his partners, and that before September I would be informed. I was very much surprised when the end of September came and I had heard nothing from them. I had been told privately that Mr. Weale, the local partner, had no friendly feelings towards me, and was fighting against me. Early in October, 1901, Weale came to see me about a private letter that he had received from Cornes. He did not show me the letter. This letter was about a proposal that Kahn and Kahn had made to Mr. Cornes in London. In February of 1901 Mr. Philippi, of Kahn and Kahn, had come to Japan. That house was the principal customer of Cornes & Co. for many years, and Mr. Philippi was one of the chief employees in the firm. He stayed here for two months to study how we did business in Japan. I think Cornes & Co. had heard of Philippi coming to Japan and their reason for offering to change my terms was that they thought Kahn and Kahn would take me away and open themselves here. Mr. Philippi made no proposal to me, and I have only learned of this since, but he asked me what my terms were with Cornes & Co., and I wrote him I had been promised a partnership the next year. I told him Mr. Till had promised that. Mr. Philippi and I were on friendly terms. When he learned

how I stood with Cornes & Co. he proposed that we should go on joint-account. Cornes & Co. had previously been charging them 3 per cent. commission, but they found that this was very heavy and often prevented the making of a profit. He thought we should go on joint-account and be satisfied with small profits on big transactions. I thought that a favourable proposition, but Mr. Till thought we should do business with Kahn and Kahn on the c.i.f. basis—cost freight and insurance. So for a time we did business on that basis. Mr. Philippi said he would talk the matter over with Mr. Cornes, and of course Mr. Till was also going home. I must say the c.i.f. basis was suggested by me and approved by Mr. Till. Mr. Philippi went to London with Mr. Kahn after he returned to Europe in order to discuss this matter. It was the letter from Cornes conveying to Weale the information about these interviews that the latter came to see me about. He told me that Mr. Kahn had offered Mr. Cornes to guarantee *yen* 30,000 a year, and that Kahn and Kahn would take 60 per cent. and Cornes & Co. 40 per cent., the cost of handling the goods in Europe being so much more than here. Kahn and Kahn offered to guarantee *yen* 30,000 a year, because that had been the amount of Cornes & Co.'s earnings from their business, and they wished to show Cornes & Co. that they would not lose by the new arrangement. I was very much surprised when Weale came to me—surprised that Mr. Cornes had not written to me. Because I got one-third of the profits of the department, whereas Weale only got one-seventh of the remaining two-thirds. When I went to Cornes it was understood by Mr. Till that I should have absolute charge. Mr. Till gave instructions that my telegrams should go without being submitted to him. Everything was left to me; there was no interference of any kind. The making of terms with new customers was left to me. When Mr. Weale came to me about the letter I was, as I say, surprised, and without giving him any answer on that subject I asked him when the proposal to turn the department into a company was going to materialise. He said, "I must tell you, Le Prevost, in strict confidence that Mr. Cornes has no intention of changing the constitution of the firm." I said that was very strange after the correspondence that had passed between us. He said Mr. Cornes had so much money locked up in the business—I understood he did not feel like investing the *yen* 150,000 which my proposal would involve. I had proposed the entire capital to be *yen* 200,000. He already had enough in the general business, and Mr. Weale spoke as if Mr. Cornes had told him he did not wish to invest any more. Mr. Weale explained that the capital of Cornes & Co. was almost all contributed by Mr. Cornes in London. Mr. Weale himself had very little money, and the capital contributed by Mr. A. J. Cornes, of Kobe, was all furnished by his father. Weale said to me, when I said this was strange action on the part of Mr. Cornes, that Mr. Cornes had too high an opinion of me to think that I would throw up the ideal position I occupied in the firm. He said, "At present you are to all intents and purposes a partner. You have sole control of the business; what more do you want?" I said: "Well, it doesn't suit me, and I shall have to consider it." We then separated. That conversation took place when he came to see me about Kahn and Kahn's proposal. I was of course very much upset when I found that Mr. Cornes was not going to keep his promise to me, and I took several weeks to consider the matter. Meantime, Mr. Philippi and I had been in private correspondence—with occasional references to business. Naturally, I wrote and told him how matters were going between Mr. Weale and myself. I had a letter from Mr. Philippi which I thought was an invitation for me to make an offer. I proposed to him that he should start on his own account as a silk exporter in Europe. He had written to me asking me to let him know if there was any change in my position. My proposal was that I should start in Japan, and that we should do business on joint-account. That proposal was not accepted by him, but it was not definitely reject-

ed, and I have an idea that he showed it to Kahn and Kahn. I was all this time inclined to stay with Cornes & Co. I intended to send in my resignation to make them come up. I thought when they received my resignation they would not let me go, but I had to be prepared in case they did. I wanted something to fall back on.

The Court here adjourned till 3 p.m.

Mr. Le Prevost's examination continued:—Since the Court adjourned it has occurred to me that Mr. Weale told me in my discussion with him that he had a letter from Mr. Cornes speaking of me in the most favourable terms. Before I saw Mr. Weale the last time I got a letter from Mr. Cornes asking me to see Mr. Weale and arrange matters. I said this morning that Mr. Philippi did not accept my proposal, but he gave me his cable address, so that if I resigned I might communicate with him at once. After I sent in my resignation to Cornes & Co. I cabled to him. It must have been on the last day of January, 1902—or perhaps the day after. I asked him what he intended to do about my proposal, and he replied that he could do nothing definite—that I was to be patient. I cabled that it was important I should know—that I should not remain in that indefinite position so long. He telegraphed that he would pay my expenses to Europe to discuss the matter there, or if I could not go to Europe he would meet me in New York. I cabled that I wanted something definite before that. My negotiations with Mr. Philippi did not go beyond that. There was no answer to my request for something definite. That is part of my explanation in reply to the Court; I can say much more. In, I think, November, 1901, I heard that Mr. Robison of No. 3, wanted to dispose of his business. That matter was quite private, and the gentleman who told me was a friend of Mr. Robison, and did not want his name mentioned, but he advised me to go in for it. While I was making enquiries about Mr. Robison's business Mr. Bremer came out to Japan. He came to see me and had a big bundle of orders which he wanted me to execute. He was in Japan in the spring of the same year, and I had heard that he wanted to start in business. I proposed business to him just as I was doing with other foreign firms. He came to me with the orders because of the proposition I made. He told me he had to go home because of a telegram from his father, and I was quite surprised when later he came to me with those orders and asked me to execute them. The proposition I made to him was this. I should explain that, in 1897, I think, Cornes & Co. secured a very good customer in Rangoon. At that time there were seven or eight firms exporting to Rangoon from Yokohama. For about two years before that I had been shipping to a Bombay house which shipped them back to Rangoon, and so we found we were competing with direct shippers in the Rangoon market. Shortly after we began shipping to Rangoon, having got this good customer, the smaller exporters could not compete with us. In addition to our customer there were three strong firms. These wished to have each a supplier of their own in Japan. When the silk goods business was established in Japan the importers abroad always tried to get the shipper in Japan to confine himself to them—just as Cornes & Co. did with Kahn and Kahn. We had offers in Cornes & Co. from other houses in Europe, but were compelled to refuse them because of our engagement with Kahn and Kahn. For that reason we decided that for any new business or new markets we would not confine ourselves. Cornes & Co. considered that they had lost all the business that they had had to refuse. The arrangement with Kahn & Kahn was that we should not export to any other house in Europe. All that I knew was that Cornes & Co. should not ship to any other house in Europe. In establishing relations with the Rangoon house precaution was taken not to have a confinement clause. At the same time I knew they would like that we should not supply other houses in Rangoon. I considered it advisable not to approach directly any of the other three firms. It was my opinion; I had sole control of the business. From 1896 I had been executing Fraser, Farley & Co.'s orders for America, and as I wanted to get the whole Rangoon

trade in my hands I proposed to them that they should try to secure the business of one of those three other firms. At this time Mr. James was in charge of Fraser, Farley & Co.'s business. I think it was in 1898 that I first began business with the other people in Rangoon, and they were so pleased with the samples that Fraser, Farley & Co. secured their orders. Binning & Co. was the first firm that Cornes & Co. had business relations with in Rangoon. The firm that we became related with through Fraser, Farley & Co. was Harperink, Smith & Co. I thought that with these two I would be able to control the Rangoon market. I made enquiries through banks and found that the other two firms being wealthy had the advantage of giving extended credit to their buyers and so preserved their hold on the market. I then went to Mr. Mollison and proposed to him that he should secure the business of one of those remaining firms just I had done with Mr. James. Mr. Mollison sent samples and secured the business of one of the other firms. This firm was Finlay, Fleming & Co. During that year the fourth firm still did a fair amount of business. About that last one I went to see Mr. Bremer and made a proposal. This was the Arracan Company. Mr. Bremer intended to try and secure that business when he received the telegram calling him home. I explained to him how I was working the Rangoon market and advised him to see whether he could secure this other company's business. This was in the spring of 1901. While I was getting the samples ready he was called home. He intended to write to the Arracan Company. When he came back in November I think he must have had that Rangoon business in mind, and expected that I would execute on the same lines the orders he brought from Europe. I had no direct relation whatever with the firms in Rangoon. Mollison and James secured not those firms but their business, and so I secured an outlet for our goods. When Mr. Bremer put his European orders before me I told him I could not undertake the business on the same lines. I could not on account of our agreement with the Kahns. I am quite certain that Kahn and Kahn would not have liked it if I had shipped through Bremer to Europe. It would not have been a matter of policy for us to do so. If I remember rightly, the orders that Bremer had were for immediate execution, and I told him he could do the business through a broker. I told him I would charge him on the basis of so much per piece ready packed for shipment. That conversation took place at the same time that I suggested that he should purchase through brokers. Cornes & Co. would be the sellers. The understanding was that I advised Mr. Bremer to engage brokers. I simply told him that he had better employ a broker, and at the same time the money must be paid to us. I regarded the broker simply as a *prete nom*. The broker stood between Mr. Bremer and Cornes & Co. We had with Dent & Co. and Fraser, Farley & Co. the same arrangement as to packing that I proposed to Mr. Bremer. He would take my word for it that the goods were all right. As to using names Cornes & Co. used to ship tea as from W. H. Taylor & Co. to America. They used that name—the name of one of their partners—to avoid annoying their other customers in America.

The Judge remarked that as no question had been asked on that subject it was not necessary to bring up what had been said.

Examination resumed; On the offers I made to Mr. Bremer he got business from Germany, but none from London. He was disappointed at this. He saw me several times and asked if I could not reduce the price, but I told him it was quite impossible. I advised him to try and secure Fraser, Farley & Co.'s business, which I knew Mr. James wanted to sell. I did not think Mr. James would charge anything. Naturally, I told Mr. Bremer that I intended to establish myself as a silk exporter if Cornes & Co. accepted my resignation. My idea at that time was to secure Mr. Robison's business. I found as the result of enquiries that Mr. Robison wanted to let the premises at a very high rental, and he also required that a very expensive staff should be taken over. I thought that was too much of an undertaking.

I saw Mr. Bremer and told him my idea was to see Mollison, and Browne & Co., and form with Bremer a company, in case my resignation was accepted. I asked Bremer whether he minded letting me have Fraser, Farley & Co.'s name; he said he did not mind. I understood he had already acquired the business from Mr. James. I think that must have been towards the end of December. At that time I was executing Browne & Co.'s orders; that is why I mention their names. I wrote abroad for orders, telling people I intended to establish myself if my resignation was accepted. Mr. Philippi was one of the persons I wrote to, as well as Dent & Co., of London. My plan was that the combination I have spoken of should take the name of Fraser, Farley & Co., and so profit by the good raw silk connections that firm had with Europe. My idea was to have four firms; I to be partner in all four and each one a partner with me in the central firm, which I first thought would be Robison & Co., the others being Bremer, Mollison & Co., and Mr. Wilson, of Browne & Co. Mr. Wilson and Mr. Mollison told me that if I would form a combination they would join it. (Witness explained his scheme in detail, showing how much profit might be expected to accrue to the different partners.) This planning was going on and I was satisfied that I was safe, so at the end of January I resigned. It was not accepted.

The Court rose at 4.45 p.m.

The case was continued to Saturday, the 5th instant, when it is proposed to continue the hearing all day.

OBJECTION TO TEMPORARY SEIZURE.

In the Yokohama Local Court, on Friday, the case filed by Mr. J. H. Jewett against Mr. H. V. Gielen, of Messrs. Bavier and Company, presenting an objection to the temporary seizure of property, came up before Judge Kobayashi.

Counsel said that defendant seized on Sept. 23rd moveable property belonging to plaintiff in satisfaction of a claim of yen 4,600, for which sum plaintiff did not hold himself responsible. Supposing that plaintiff should be found responsible for the amount claimed, there was no necessity to seize his property as he is not a poor man or unable to provide security for such a small amount as yen 4,600. The pretext advanced by defendant in taking such a step was that plaintiff was absent in America, but as it was only for a temporary business visit to his head office in New York and it was known he would return within no distant time, the excuse did not hold good. The action taken by defendant against Mr. Jewett seemed to have been intended to injure the latter's honour.

Defendant's Counsel held that a law case between the parties was now going on in another Court, and naturally it became necessary to seize the property. It was not done wilfully or to injure the honour of Mr. Jewett.

Mr. Sato, plaintiff's Counsel, repeating the foregoing statement, stated that Mr. Jewett was a gentleman who had lived in Yokohama for many years. Such a step as seizing his property ought not to have been taken in such a case as this, where there was no fear of the concealment of property. Plaintiff was a wealthy merchant carrying on his own business with a branch in this city and his head office in America.

Mr. Masujima, defendant's counsel, further stated that Mr. Jewett was carrying on business under a false style as Bavier & Co., for which reason he was charged with the forgery of private documents and fraud in the Yokohama District Court. The case had been rejected by the Public Prosecutor, and counsel had carried it to the Tokyo Appeal Court. No decision had been given yet.

The parties having presented their documentary evidence, Counsel entered into explanations with regard to them, after which the case was adjourned till Dec. 7th.

FORGING KOREAN "NICKELS."

T. Yasui, M.P. for Okayama, and a man named S. Shimada, who were charged with having forged Korean nickel coins and put them in circulation in Korea, were sentenced in the Osaka District Court on Nov. 28th to five

months' and eighteen months' imprisonment with hard labour, respectively, and the latter also to a fine of yen 30 and six months' police surveillance.

J. R. CUNNINGHAM SENTENCED.

The trial of J. R. Cunningham, a bluejacket on the U. S. cruiser *Albany*, who was charged with having assaulted a policeman near the Harbour station, was resumed in the Yokohama District Court on Nov. 28th before Judge Matsuda, and Public Procurator Nakamura. Mr. V. Okuma was present as counsel for the accused.

At the opening of the proceedings, the lawyer asked accused some questions as to the events which occurred at the Hatoba on the night of Oct. 25th. Accused repeated the statements which he gave the Court at the previous hearing.

Counsel thereupon argued briefly in defence, contending that the accused was intoxicated at the time. The whole affair seems to have resulted from mutual misunderstanding and ignorance of the language spoken by either side.

The Court retired for a short time for consultation and on returning sentenced the accused to six months' imprisonment with hard labour with costs of yen 20.

SENTENCE ON AN EDITOR.

Mr. S. Katayama, the editor of the *Shakai Shugi* (Socialism) who was charged with having published a statement injurious to social peace, was sentenced in the Tokyo District Court on Nov. 27th to a fine of yen 40.

K. YAMADA v. SIMON, EVERS & CO.

The hearing of this case, in which plaintiff claims for loss on a sugar transaction, and which was adjourned on July 6th, was resumed in the Yokohama District Court before Judge Kanbe on Dec. 1st.

Plaintiff's Counsel asked the Court to review the evidence given in another case by Imade and Awoyagi, two tide-waiters of the Yokohama Customs, in which Messrs. Simon, Evers and Co., appeared against K. Yamada in the Yokohama District Court. The suit is now removed to the Tokyo Appeal Court. This evidence showed that Mr. J. Dodds had not taken any of the sugar in dispute from the Customs compound as a sample to be used for analysis.

Defendant's Counsel urged that the evidence had no bearing on the present case and that the witnesses did not state at the hearing which took place on March 2nd this year that Mr. Dodds had not taken the samples from the Customs compound. What they stated was that they did not remember whether Mr. Dodds had appeared there for the purpose of getting samples of sugar, or not.

The Court decided to apply to the appeal Court for the evidence.

Z. Komiya, sugar dealer, was examined as a witness. He stated that he purchased, at the end of June, 1902, 1000 bags (=84,000 *kin*) of sugar at auction for yen 8.80 per 100 *kin*. The sugar was a lot of merchandise which plaintiff had contracted to buy in Oct. 1901, from defendants. The auction price was lower than the market quotation at that time. The market price had been quoted at yen 9.50 or 9.60. The covers of the sugar were nearly all stained by sea-water and the contents were impregnated with salt.

Cross-examined, witness said he sold the 1,000 bags in Tokyo. He tasted 2 or 3 bags only but did not analyze the contents. He, however, found a salty taste in the inner portion of the package.

The case was again adjourned *sine die*.

BANKRUPTCY.

In the Kyoto District Court on Nov. 29th, a decree of bankruptcy was given in the case instituted by various creditors against the Kwansei Trading Company. The amount involved is yen 1,101,194.15 in the total. According to the decree, yen 207,858.56 out of yen 211,903.17 found to the credit of the bankrupt firm, would be paid to the creditors in due proportions according to their claims. The remainder will be used as expenses of liquidation.

MURDERER SENTENCED.

H. Takeuchi (42) who on the night of September 9th, murdered Yone, eldest daughter of K. Takaka, a merchant living at Asakusa, Tokyo, was sentenced in the Tokyo District Court on December 2nd to penal servitude for life.

THE "TOKAI MARU" CASE.

The Nippon Yusen Kaisha instituted on Dec. 2nd a case in the Hakodate District Court against the owner of the Russian steamer *Progress* which collided with the Japanese steamer *Tokai Maru*, claiming yen 148,000 for loss caused by the sinking of the latter. The hearing will be opened on April 24th, 1904.

The Japanese company has applied to the Court to seize temporarily the *Progress*, and warrant was granted on December 2nd on a guarantee of yen 50,000.

In the same case, the *Iiji* reports that the owner of the Russian steamer has lodged a similar claim in the Court.

ANECDOTES ABOUT MR. KATAOKA.

Under the above title the *Fukui Shimpō* has some notes concerning the late President of the Lower House. The following story is related by Mr. Aki Kiyoka who was with Mr. Kataoka when he was imprisoned at Ishikawajima on account of his promulgation of three great principles of liberty. "One day Mr. Kataoka was binding together straw and making something when I asked him what he was doing. He replied that he was making a shoe mat, and, on my asking him for what purpose he needed it, he answered: 'The jailers and others walk on the floors with muddy shoes and so they become very dirty. By making such a thing as this your work and mine will become much easier.' I was in a rage, thinking it an unheard of shame that our leader, and one of the great men of the country, should be making shoe mats for such mean men as jailers. But Mr. Kataoka's calmness cooled my zeal and diminished my resentment. I said nothing more about the matter, but on thinking about it afterwards I took it as an evidence of his advance in faith. Though Mr. Kataoka passed away at the age of sixty he had a life which was longer than sixty years, for there were many more changes in his career than in that of an ordinary man. In the first place, he took part in the war of the Restoration, and saw active service. Secondly, he exerted great influence in the establishment of constitutional government. Thirdly, after the promulgation of the constitution he performed the duties of President of the Lower House. Fourthly, it is well known how he served God as an evangelist. Fifthly, in the cause of education he was connected with a public school in Kochi, and he afterwards became president of the Doshisha. There is a great lesson we may learn from his life. We are inclined to esteem highly those brilliant talents which shine in the eyes of men. We ought rather to value the strong will and sound principles which enable one of a noble but retiring nature to do a work of importance."

FOOTBALL.

A considerable amount of fun was got out of Saturday's football match between the Y. C. and A. C. and a team from the British barque *Lawhill*. To begin with, the sailormen were three short, so local substitutes were enrolled, and these substitutes knew more about the game than did the sons of Neptune. Not but what the breezy sailor-folk were in dead earnest and did all they knew to keep the ball rolling in true nautical style, but they were not sufficiently limber on their pins and altogether too light for their active opponents. In the first half four goals were scored against them, and in the second seven, making 11 in all, against which they did not make a solitary point. But they had the fun and the Y. C. and A. C. the glory.

THE KIANGYIN TRAGEDY.

A correspondent sends the *North China Daily News* particulars of the suicide on November 20th of Mr. John Jürgens, Chief Instructor of the Yangtze Forts. It appears that Mr. Jürgens had been acting very strangely for a number of days, and while the inspection of a gun was in progress, under Inspector Keefe, the Generals, Taotai, and lesser officials being present, he came up, approached the officials, and to the utter amazement of all, made the koutou to them! Arising from this position he stepped up to Mr. Keefe and said:—"Now Keefe! we, you and I, are going to be big Generals in the Chinese army. War has been declared!" He then demanded that Mr. Keefe should koutou to the officials! Being advised to go home, he finally went to Mr. Keefe's house for a while. The inspection went forward and afterwards all the officials went to the quarters of the Commander of the Forts. While discussing the drill, Mr. Jürgens again came up, and left a note with Mr. Keefe for one of the missionaries, saying he was glad that special man was in Shanghai. He then tried to enter the reception room where the officials were. The officials then went into the private quarters of the Commander; but Mr. Jürgens pushed forward into the room, saying "I am going to show these people something to-day." As the officials rose to receive him, he exclaimed: "Your Excellency, see!" and in a flash he put a Mauser pistol ball through his brain. Death was instantaneous.

The note left for the missionary read:—

"Dear Mr. ——— The Lord has begun reforms in China last night. Tell the friends. The Lord reigns. Signed J. J."

On Thursday he had given to his personal attendant the following note in pencil:

"Thursday 19. XI. 1903.

"The reformation of China has begun this morning at 8 o'clock, with Taotai Tao, Captain Wong, Chief Officer Lie, and John Jürgens, written 6h. 30m. p.m."

Baron Von Gebattel, German consul at Nan-king, arrived at 9.30 p.m. on the 22nd, but to the great amazement of both British and Americans (no Germans being present), said there would be no inquest and the interment might proceed at once. No inquiry was held, and the funeral took place with military honours. Mr. Jürgens was about 48 years of age. He has been in the Chinese service in various positions since 1874, and Chief Instructor at Kiangyin since 1894. He was a man who had many friends and no known enemies.

SHIPPING CASUALTIES.

The Nippon Yusen Kaisha's steamer *Ise Maru* took fire, while at Chefoo, on the evening of Nov. 26th, the outbreak causing more or less damage to cargo. She has left for Kobe, where she is expected to arrive about Dec. 10th.

The sailing ship *Tsunemoto Maru* went ashore on Nov. 26th off Takeshima, near Shimonoseki. The steamer *Unsei Maru* was at once sent to the scene and a portion of the cargo was removed. The *Tsunemoto Maru* floated on the afternoon of the following day. No damage was caused to either cargo or hull.

The Nippon Yusen Kaisha's European liner *Inaba Maru* collided on Nov. 27th with another ship in the Scheldt, near Antwerp, sustaining some damage to her hull. The Japanese steamer, however, proceeded to Middlesboro' and was expected to undergo repairs at Newcastle which will take about two weeks. No damage appears to have been caused to the cargo. The *Inaba's* berth for Japan will be taken by the *Hitachi Maru*, which left Marseilles on Nov. 26th for London.

Thirty-one property owners in Yoshihama-cho and Matsakage-cho, Yokohama, whose buildings were isolated for several weeks when the plague prevailed there, applied to the Kencho on Dec. 2nd asking to be exempted from the supplementary house-tax for two years. No definite answer was given by the Governor to the applicants.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the *Nichiyō Sōshi* (Protestant Episcopal) we find a quotation from one of Bishop Nicolai's charges dealing with the attitude to be assumed by Greek Church converts in the event of Japan's going to war with Russia. In the line taken the Bishop displays his wonted astuteness. Considering the sensitiveness of the Japanese on the point discussed by Bishop Nicolai, his outspokenness will go far to set the minds of his converts and outsiders at rest as to the possibility of his covertly encouraging Japanese disloyalty. The occasion for the Bishop's stating his opinion was the close of a Church synod held in Tōkyō some weeks ago. Here is the gist of the Prelate's remarks:—The relations of Japan and Russia having become somewhat strained, there are not a few who think that war may break out between the two countries; and Christians point out how greatly our work would be hindered by such an event. In the first place, I would say that the less we meddle with politics the better. We have really nothing to do with the questions at issue or with the mode of settlement adopted by the countries concerned. This it is the duty of the pastors present to impress upon their flocks. I pray for peace; but if war should unfortunately occur, then Japanese Christians must show the depth and reality of their religious feelings by fighting manfully in their country's cause. Christ said that no greater love can be shown than by a man's laying down his life for his friends. A Japanese Christian fighting for his country is manifesting to the full this Christian love. (*Jikoku no tame ni tatakau wa, kore Haristōru* (Christ) *no oshiye no ai too tsukusu no de aru.*) Though you and many of your fellow-countrymen have received your Christianity from Russia, if war break out, Russia will become your enemy, and to fight against the enemy of your country is your duty. But you will ask, is not this a violation of the principle that we are to love our enemies? Not at all. War can be carried on without hatred. If you fight against an enemy, it is not because you hate that enemy, but because you wish to vindicate some principle on which your country insists or to save your country from being oppressed by some other State. Personal enmity need not, and should not, be allowed to influence the combatants in any way.

According to statistics drawn up in 1902 and recently published in the *Nichiyō Sōshi*, the following is the strength of the Nippon Seikōkai, alias the Protestant Episcopal Church, arranged according to Dioceses.

Titles of Office-bearers, &c.		North Tōkyō Diocese.	
(1) Bishops	1		
(2) Foreign Missionaries	15		
(3) Japanese Ordained Ministers	15		
(4) Catechists (All Japanese)	18		
(5) Deaconesses	19		
(6) Converts on Church Rolls	1,965		
(7) No. of Adult Baptisms in 1901	155

In its monthly notice of new books the latest number of the *Nichiyō Sōshi* draws attention to the excellency of the translation of *Black Beauty*—a book already alluded to in these columns—and to the appearance of a kindred work called *Inu no Sekai* (The Dogs' World). Both these works have been translated by Mr. Honda Masujirō, and have for their object the prevention of cruelty to animals. The *Nichiyō Sōshi* also refers in a very laudatory manner to the recent publication by a Mr. Katō of a work on remarkable women called *女子立志篇* *Joshi Risshihen*. We

gather from the notice before us that the material for this work originally appeared in the *Kaiei no Tomo*, a publication dealing with home life, which is said to be widely read. The term *Risshihen*, since it was employed by the late Mr. Nakamura Keiu for his translation of Smiles' "Self-Help," has been universally adopted as a title for books bearing on earnestness of purpose and the formation of character.

In the last numbers of the *Nichiyō Sōshi* the question of metropolitan parochial boundaries is discussed. The writer points out that any arrangement of parishes according to geographical districts is quite impossible, as people are free to attend what church they please in Tōkyō as in western cities. Yet he seems to think that some division of districts and ecclesiastical "spheres of influence" is necessary, though his short article does not indicate what form this should take.

The Protestant Episcopal Church has just issued a very handy Directory of the Mission, giving the names and addresses of all its pastors and catechists. This Mission has a weekly journal called the *Kirisutokyo Shūhō*, which has been appearing every Friday for about three years. It covers 14 or 15 good-sized pages and discusses subjects connected with the Church, publishes sermons, and notices important religious books.

* * *

Christian literature would be much improved by the amalgamation of many of the existing organs. "Better be the tail of an ox than the comb of a cock," is a Japanese proverb that well describes Japan's national policy *vis-à-vis* foreign countries, but in literary circles an exactly opposite opinion seems to find most supporters, and writers prefer the rôle of the cock's comb. Hence the number of insignificant journals. Almost every sect has more publications than it can run efficiently. It is quite certain that more attention would be called to the writings of Christian literary men were they invariably published in one or, at the most, two powerful magazines. The Greek Church, in addition to the fortnightly organ called the *Seikyō Shimpō*, from which we have so often quoted, has a monthly publication called the *福音* *Shimeii* (the Divine Message). It seems to have been in existence for at least five years. While dealing in the main with the same subjects as the *Seikyō Shimpō*, it is nothing like as well edited as the latter journal. It seems, however, to give more attention to Russian writers than the *Seikyō Shimpō*. A very long account of the famous author of *Dead Souls*, Nikolai Gogol, has been appearing in the *Shimeii* during the past 9 months. It should be mentioned that the *Shimeii* is the special organ of the Greek Church Young Men's Association. The last number, under the title of "The Strait Gate and the Narrow Way" discusses the present Far Eastern crisis in its bearing on mission work in Japan as carried on by Greek Church converts. The writer does not deny that a certain amount of odium will be attached to converts who are even indirectly connected with Russia should war break out, but his advice is that this should be borne cheerfully as part of the burden which every faithful servant of Christ is called on to carry.

* * *

The *Seikyō Shimpō* discusses in a very scholarly and in a fresh and taking manner a number of semi-religious and semi-philosophical questions, and this magazine devotes considerable space to purely historical articles, the object of which is to place readers in possession of cardinal facts connected with the fortunes of Christianity in past ages. One of the recent numbers (No. 550) gives a succinct account of the conflict between the Papal Power and Civil Government in past times, another article shows how often in the past the progress of thought in Europe was hindered by religious interference and opposition. Mr. Ishikawa Kisaburō, we take it, pens most of the articles on philosophy. In No. 549, a very thoughtful and discerning leader written by Mr. Ishikawa appears, entitled, *Bunmei no shinka* (眞價) *no tou* "Wherein lies the real value of civilisation?" After pointing out how rapidly Western thought on all sorts of subjects is immediately re-echoed here, not in-

frequently in a most indiscriminate manner, Mr. Ishikawa proceeds to deal with the theory that Western civilisation is essentially Christian. This notion he shows to be quite untenable. He acknowledges that many noble qualities to be found in the higher types of Occidental humanity were originally the product of Christianity, but modern life in the West, taken as a whole, is based on a principle which is fundamentally opposed to the teaching of Christ, says Mr. Ishikawa. Darwinism has, as Nietzsche has pointed out, become the gospel of the majority of Europeans and Americans. Universal competition and the survival of the fittest, these are nature's laws, whose operation no one can prevent. This really means that the weak must go to the wall. Throughout the whole of the Western world every Government, every company or corporation, every individual is labouring night and day in order to secure as much comfort in life as can possibly be obtained. The underlying principle of what is called Western civilisation is distinctly Hedonism pure and simple. There are higher and lower forms of the pleasures, comforts and conveniences striving for, but still the truth remains that the one absorbing object in view everywhere is to how to obtain these things. Take the majority of foreigners who visit this country. They surely are a fair type of what most impresses the Western mind. Since they come from Christian countries it is natural for us to put questions to them bearing on religion. Try this plan, and you will find that the reply will almost certainly cause you to blush for your indiscretion. They most of them glory in the fact that they have no religion, and as for morality they only regard it as a device for increasing the happiness of individuals and society. Profit and pleasure these form the standard by which all things are judged. (*Karera no ōku wa misukara hishikyo-shing wo motte hokori, dōtoku zō motte jiro to shakari no kōfuku zō zōshin suru hōben ni sugita to naki, riyoku to kōwaikaku to zō motte banji to shi suru hyōjun to sesaru mono hōondo mare nara ni arazu ya?*) The Gospel of Christ is the gospel of self-denial, self-sacrifice and self-devotion. By means of these the natural man, that is, the carnal man, is subdued. This Gospel is quite opposed to the modern universal Epicureanism. Among great living teachers Nietzsche may be said to be the product of Western civilisation. He is the favourite of the age because begotten of it. But he is confronted by one who may be compared to a step-son, Count Tolstoi. (*Shikaru ni zō chōji* [favourite son] *Nietzsche too umihuru Ōshō no bunmei wa, mata soga hōmō no namaku to shite Tolstoi Haku* [no kinnen no shō] *zu umitari*). The European modern gentleman has banished religion and now worships at the shrine of the goddess called Art, which is declared to be supra-human. Here Mr. Ishikawa compares Western civilisation to a two-headed serpent, one of its heads is Nietzsche, but the other is Arch-foe, Tolstoi. Modern civilisation and the Gospel of Christ are incompatible, says Tolstoi. He may be too extreme, observes Mr. Ishikawa. We do not endorse all he says, but his main contention that modern European and American life make not for Godliness, but for the very opposite, is indisputably true. Were it not a fact that the tendency of thought in Europe at once becomes the tendency here, that the men who lead opinion there soon lead it here, there would be no necessity for me to discuss this question so earnestly continues Mr. Ishikawa. What takes root in the West soon appears here in the form of fast-growing shoots, which are grafted on to the tree of our Japanese civilisation oft-times in defiance of all laws of congruity. The teaching of Nietzsche, the orthodox, logical exponent of the real spirit of modern Western civilisation, and the doctrines of the champion of Christ's Gospel, Count Tolstoi, are both well-known in Japan. In the midst of the universal praise which Western civilisation daily receives in this country, it is highly important that thoughtful men should endeavour to analyze it and determine whether it is at bottom religious or not. More idle curiosity may lead many Japanese to study the writings of both of the above-named teachers, but to serious-minded persons the question at issue must appear

be the most vital of all questions which the modern world is engaged in discussing.

* * *

As indicated in a former part of this Summary, any of the Greek Church Christians are much concerned as to the attitude they ought to adopt in case of war breaking out against Russia. Mr. Mizushima Kōyō, in an article contributed to the *rikyo Shimpō*, discusses in a sensible manner the whole question, vindicating the conduct of Greek Church Christians against the insinuations which ill-disposed critics have openly stated and at the same time advising these Christians to take a broad and common-sense view of their relations to the Russian branch of the Greek Church. It would seem, by what Mr. Mizushima says, that some evangelists belonging to this Mission have argued that in case of war, it would not be right for them to receive money from the enemy of their country. This Mr. Mizushima thinks to be quite absurd. The money in question does not come from the Russian Government, says Mr. Mizushima, but is subscribed by earnest private individuals in Russia with the express object of helping forward Christian propagandism in Japan. It is money given to the Lord and certainly may be lawfully used by the Lord's servants in this country without any scruples even in the event of Russia and Japan being at war with each other. Ill-informed Japanese are apt to think that the Greek Church means the Russian Church, and that Greek Church Missions are necessarily connected with the Russian Government. That is not so. The Russian Church is only a branch of the Greek Church. The Czar is not the head of the Greek Church. And it is this Church which has planted missions in Japan. Hence Japanese Greek Church Christians have no direct connection with the Russian Government. As regards the pecuniary help received, it is only a temporary measure preparatory to the state of entire self-support which every separate congregation aims at reaching. There are some who fear that in the event of war Russian subscriptions to the mission would fall off. If the donors are really in earnest and are sensible men and women, there is no reason for their allowing the action of the two Governments concerned to affect their attitude toward Japanese Christian Evangelists. If they believe in the reality and desirableness of the work carried on by the mission now, why should they cease to believe in it when war breaks out. Some foolish people, continues Mr. Mizushima ask whether in the event of war we Greek Church Christians would pray for Russia or for Japan. A very silly question, surely! When our disloyalty has been proved to exist it will be time enough to ask such questions. Of course we shall pray for Japan. Many of the questions raised in connection with this subject are the result of ignorance of the ways of the world. In the many wars of history not a few of the relations of countries with each other have been unaffected by the fact that two nations have been at daggers drawn with each other. This has been the case in regard to commerce,* religion and charity, and there is no reason for thinking that as the world advances and grows more liberal-minded things will be different.

* * *

The *Kōye*, a Roman Catholic Fortnightly, is publishing as editorials a series of short articles on Evangelistic work. The first entitled *Denshi no Jiki* (The Season for Evangelization), appeared on Sept. 25th. Reference is made to the suitability of the autumn months for mission work and to the ripeness of the present time, regarded in a wider sense, for spreading the Gospel. The next article deals with "Methods of Evangelization," discussing public meetings, preaching services and the like. The writer states the fact that in some parts of Japan the interest in Christian lectures and sermons has fallen off greatly, and there are some Christians who attach no importance to them whatever, con-

sidering that the time has passed for the adoption of such methods of instructing people. (*Kōkai* [公開] *ensetsu no kōwa* [効果] *ya kiwa-mete bishō, tanomu ni taru mono nashi nado no gen wa, ima mo dō-warera no mimi ni suru tokoro nari.*) The writer shows most conclusively that for answering objections to religion, for dissolving doubts, for explaining Christian doctrines and for the stimulation of Christian zeal, public speaking furnishes opportunities of an exceptional kind. But public speaking must be of the right sort in order to prove a powerful instrument for good. Much depends on the ability, tact and persuasiveness of the speaker. At third article on the same subject appeared on October 25th. It details the conditions subject to which alone public speaking as an evangelistic agency can be rendered thoroughly successful. Briefly stated these are:—(1) the choice of a suitable subject, that is a subject suited to the state of mind of the majority of the persons composing the audience. The object of speaking being to induce the hearers to investigate our religion, care must be taken to touch on topics likely to awaken their interest and stir up within them the spirit of inquiry. It is necessary to know just what hearers think and to start from the ideas they entertain in order to lead them on to others. (2) The choice of a suitable subject can only be rendered possible by minute knowledge of the opinions held by the hearers and of their general attitude towards Christianity. This involves much study and observation. Lacking this knowledge, many of our young men constantly deliver unsuitable discourses, which are naturally followed by barren results.

The latest number of the *Kōye* advocates the establishment of local assemblies which shall have for their object general conversation with religious inquirers. Such persons cannot be suitably dealt with at public meetings of the kind usually held, says the *Kōye*. People generally object to disclose their real sentiments on such occasions. But if facilities for social intercourse between the church and the outside world were created in every part of the country, great good would certainly result therefrom. Gatherings of this kind, however, are as necessary for believers as they are for unbelievers. They should in all cases be attended by a missionary, a native pastor, or a catechist. The people assembled should be encouraged to express their own convictions unreservedly without fear of giving offence to anybody. It would be thus possible to find out just what people think on religion. The title proposed for these gatherings is *kyōri Kenkyūkai* (Doctrine Inquiry Meetings).

* * *

Mr. Ishikawa Kisaburō has contributed to the *Fukui Shimpō* a very interesting account of Bishop Nicolai's Missionary career and of the Greek Church Mission, the principal part of which we give below in Mr. Ishikawa's own words. Bishop Nicolai first arrived as a Missionary in Japan in June, 1861, before I was born. The Bishop was then only 24 years of age. So that for no less than 44 years he has been incessantly engaged in Mission work in this country. During the first years of his residence here he encountered no end of serious obstacles and created no little suspicion in various quarters. Hardly anybody knows all he went through. But he himself speaks of these times with a light heart. They never weighed very heavily on his ever buoyant spirits. Bishop Nicolai began his missionary labours in Hakodate. He was there at the time of the Revolution, and subsequent to that event many of the defeated supporters of the Tokugawa Shōgun visited him and inquired into the Christian doctrines. His friendliness with anti-Royalists immediately gave rise to suspicion on the part of the Chōshū Clan Government, and it was soon given out that he was a Russian spy. At that time the anti-Russian feeling was very strong in Japan and since it was asserted that Bishop Nicolai was far more powerful than a Consul or even an Ambassador he had to bear the full brunt of the prevailing hostility. His situation from the first was quite different from that of the English, American, French and German missionaries who entered Japan borne as it were on

the crest of the wave of Western civilisation. They did not live and work under the ban of suspicion as did the Russian Bishop. But he encountered difficulties of a different kind. Being connected with the Russian established Church, it was given out that he had the control of very large sums of money; that he was backed by a church which was prepared to spend any amount that might be required to make the mission a success. This was the exact opposite of the truth. Such money as he received for his work here did not come from the Russian Government, but was voted by a small Russian Missionary Society. The chief object of that Society was to evangelize Siberia and adjacent regions and it could not be induced to grant more than a very small sum of money to the Japan mission at the beginning of the Meiji era, which sum has never been increased since that time. Seeing that it was altogether insufficient to supply the wants of the mission, Bishop Nicolai commenced to collect funds himself, and in this he was fairly successful, receiving a number of subscriptions from Russian prelates, several Russian noblemen, and a few rich merchants. But even so, many undertakings that the Bishop desired to see carried through had to be abandoned for want of money. Under these circumstances Bishop Nicolai decided to devote the whole of his salary to the work of the Mission, and thus it came about that the Mission found itself in possession of an annual grant of about 73,000 yen. This money was used in erecting buildings, publishing books and in paying the salaries of evangelists. The sum was small enough, considering that we have more than 200 churches scattered over the country, all of which are receiving a certain amount of help from the central mission in Tōkyō. Every evangelist and pastor throughout the country is paid out of the central mission fund, and it is true that there is almost no church attached to the mission which can be said to be independent. This is a fact of which we Greek Church Christians are much ashamed and over which we grieve. At the present time our converts number 27,966. We have 48 ordained pastors; 149 evangelists; 12 or 13 translators; 7 or 8 teachers in the Divinity School; 12 or 13 teachers in the Girls' School. The theological students number 78. The Training School for Evangelists is attended by 16 students and the School for deaconesses by 83 women. Besides these there are some persons employed in teaching singing and music or in transacting various business connected with the work. The students who are undergoing training at our various schools, both male and female, are all boarded at the expense of the mission; so that quite one-third of the money placed at our disposal is spent on our schools. The cost of keeping up the three periodicals issued by the mission is considerable. Then no year passes but we publish translations or original works on religion. This swallows up large sums of money. When allowance is made for all these expenses, it will be seen that the sum of money remaining for use in direct evangelistic work is small. Our evangelists have a very hard time of it to make two ends meet. No man who is not really in earnest will be found carrying on evangelistic work in our mission. Our evangelists receive only about half the salary customarily paid to such workers by Protestant missions. And yet they remain on at their work most gladly and devotedly year after year. Bishop Nicolai is greatly moved by the spectacle of this devotion, and earnestly desires to alleviate the hardships borne by our evangelists by granting more money towards their support from the central Mission fund or by inducing the congregations they serve to subscribe more liberally to this object.

Whence comes this noble fortitude and perseverance amid hardships and privations shown by over 200 Christian workers connected with our Mission? They are following in the footsteps of their beloved teacher. The life lived by Bishop Nicolai furnishes a striking exemplification of the spirit he desires to instil into the minds of his evangelists. I will describe that life for the benefit of those who are unacquainted with its

* When Napoleon was at war with England French merchants were importing into England large quantities of wheat at great risks.—(WRITER OF SUMMARY).

details. Bishop Nicolai has always been a bachelor. He has no house of his own. In Russia his rank was very high, not inferior to that of the nobility. But here he occupies an eight-mat room in which he eats, studies and sleeps. It contains one table, 2 chairs, one bed, one small chest of drawers and a few book-shelves. Ornaments of any kind are nowhere to be seen. It is true that he has a waiting-room for visitors, into which the rich and poor alike are shown. His dress is the simplest imaginable, and varies little winter or summer. In quantity he possesses fewer garments than any ordinary Japanese like myself deems necessary. He has never had a clock in his room. He depends on a very rough-looking silver watch which he received as a present from a relation years ago. It goes without saying that no ring is to be seen on his finger, and though as he nears 70 years of age he cannot dispense with spectacles, those he uses are in keeping with the simplicity of his surroundings. He rises at 6, takes a little tea and a few slices of dry bread at half-past six. At half-past seven he begins his day's work. The whole forenoon is spent in translating. Our New Testament, Liturgy and many other works have all been done by Bishop Nicolai. At noon he takes a very simple meal, and usually rests till about 2 p.m., when he receives various business officers and employees of the Mission, who bring reports to him and receive instructions. From 6 to 9 at night he translates or writes letters. He takes no evening meal. So that he practically lives on one meal a day. All the correspondence connected with the mission he does himself. He only uses a secretary for writing special Japanese letters in the classical style. All other writing and account keeping is done by himself. In our mission we have no other foreign missionary. Bishop Nicolai runs the whole concern himself. Though the names of two other missionaries are on our books, these gentlemen are attached to the Russian Legation and have no real connection with us. The Bishop remains at his post the year through. Never once has he run away from the heat of summer. Yet week in and week out there is no man busier than he. I doubt very much whether if the work accomplished by our eight ministers of State were all put together it would amount to what is performed by this single man. Busy as he is, he finds time to read English, German and Russian magazines and newly published books, the *Fiji Shimpō* and the *Japan Times*, as well as some half a dozen theological magazines. Hence he is always acquainted with what is going on in the outside world. He studies Mr. Uchimura Kanzo's Biblical Commentary and pencils his criticisms as he reads. Works published by such well known men as the late Mr. Fukuzawa or Mr. Shimada Saburō he invariably reads. It is unnecessary to say that he reads Japanese books of any kind with the greatest ease.

Though we have only one missionary attached to our mission he wields more real influence than a hundred ordinary men. His devotion, his self-denial, his untiring industry are ever before us as a model and a stimulus. However poor any of us may be, there is no one poorer than the Bishop. However industrious some of us may be, there is no one so industrious as he. Compared with him, we are all men of leisure. He is nearly 70 and I am only 30—in the very prime of life, yet for real energy I can't compare myself to him for a single moment. I believe that if in past years say to Protestant missionaries could have put forth even half the amount of energy displayed by Bishop Nicolai, Protestant Christianity would have been ten times more powerful than it is today. (*Yo wa meshi Shinkyōha no senkyōshi jū nin ga Nikorai Shukyo [主教] no hambun hodo no sei to dashite honsō shita nara, Shinkyōha no Kyōkai wa konnichi yori mo jū bai no seiryoku 100 jū suru ni itarubeki koto to shinzaru*). When I compare the hundreds of missionaries who with their families go off to mountain resorts to escape the heat with the solitary occupant of the small Surugadai chamber as he wipes the streaming perspiration from his brow and continues his work hour after hour, a strange feeling comes over me.

The *Nihon Seikyōkai* (The Greek Church

Mission) was founded by Bishop Nicolai and has reached its present position under his guidance. It is important to note that we have always adopted the policy of only observing such Christian customs as are universally observed, and we guard against introducing any foreign national customs. We aim at having all our work carried on by Japanese only and all our churches are of a purely Japanese type. Moreover, our methods of evangelization are of a quiet and unobtrusive kind. We blow no trumpet to attract public attention. Rather than address large audiences in a noisy and sensational fashion, we endeavour to converse with individuals in the stillness of their rooms. In this way we cause the light of the Gospel to shine in the dark corners of the land and by quiet persuasiveness lead men to repent of their sins and enter God's Kingdom.

NEWS OF THE DAY.

The Emperor on Nov. 30th attended the graduation ceremonies at the Military College.

Sir Claude MacDonald, British Minister, proceeded to the Palace on Dec. 1st and had audience of the Emperor.

Havas telegrams announce that the court of cassation has rejected the appeal of Frederic and Madame Therese Humbert.

Kirishima Yama rambled on the night of Nov. 25th and emitted much smoke. The following morning, ashes were found all over the district of Miyasaki.

Owing to the storm which occurred on Nov. 28th, some fishing boats capsized off Hinoki-ura, near Hakodate, with the result that thirteen men were drowned.

H. H. the Maharajah of Kapurthala and suite left Tokyo on Nov. 29th for Hakone. After staying there for about a week he is expected to pay a visit to the western cities.

Mr. Kono, Governor of Hyogo prefecture, has been decorated by the Czar. He was in attendance on General Kuropatkin on the occasion of his recent visit to the city.

The sailing ship *Keiki Maru* went ashore on Nov. 26th off Kasuto, near Suwo province, on her way from Shinagawa to Nagasaki. All the crew were saved but the vessel and cargo were lost.

Tokyo papers believe that Mr. K. Tsudzuki will be appointed Minister of State for Home Affairs. The portfolio is now occupied by Count Katsura, the Premier, in addition to his own post.

Mr. S. Hayashi, Japanese Consul at Bombay, telegraphed on Nov. 28th that the cotton market was still steady. Bengal broach advanced 45 rupees over last week. Stock amounted to 36,800 hales.

Mr. Y. Horuki, president of the Tokyo Appeal Court, has tendered his resignation owing to illness. The *Fiji* believes that Mr. Kyo Hasegawa, a Judge of the Court of Cassation, will succeed to the vacant position.

The Cabinet held a meeting on Dec. 1st at 10 a.m. lasting till 3 p.m. During the conference, the Premier, and the Ministers for War and Foreign Affairs proceeded to the Palace to present reports to the Emperor.

Tenders for the supply of pipes for the Shimonoseki Water Works were opened on Nov. 26th with the result that the Taniguchi Iron Works, Saga province, who sent in a tender for yen 133,400, was accepted.

Baron Komura, Minister for Foreign Affairs, is to entertain to-day at his official residence, the Premier, the Cabinet Ministers, and high officials of the Department of Foreign Affairs. He will give two dinner parties during December.

Owing to dullness of business, the flannel weavers in Wakayama prefecture are reported by

the *Kokumin* to be in the utmost distress. Twenty of them have been proceeded against by bankers in Osaka and their property seized.

A rather serious accident occurred on the Munda at Yokohama on Monday morning through the action of restive horses, when Mr. Boku Shidzuoka, a well-known resident of this town, was taken from one of the Kirin Brewery drays and broke his arm.

Barons Sone and Kiyoura, Ministers for Agriculture and Commerce, and for Finance respectively, left on the evening of Nov. 28th for Otsu, near Shidzuoka, to visit the establishment formed there for testing and investigating products of the forest and garden.

The factory law which is under investigation in the Bureau of Commerce and Industry, will be submitted to the High Assembly of Agriculture, Commerce and Industry, and the Central Sanitary Assembly for review. The law will be introduced in the coming session of the Diet.

An official telegram, in the *Official Gazette*, says the cotton market in New York was quiet during the week ended Nov. 26th. The closing price on the 28th was quoted at 11.35 cents per pound. The stock was calculated at 50,997 bales. The price for delivery in January was 11.78 cents.

According to a telegram dated Nov. 28th from Mr. T. Yamada, Japanese Consul at Lyons, the state of the raw silk market was inactive. Buyers were only looking over the market, which was expected to have a further fall. Japanese filatures No. 1, 9 to 11 deniers, were quoted at 46.50 to 47.50 francs.

Mr. H. Imamura, son of the late Mr. Seinosuke Imamura, a well-known trader in Tokyo, has married Miss Toshi, eldest daughter of Baron T. Nitta. The wedding party will be held on Dec. 5th at the Imperial Hotel. The bridegroom recently returned from England, where he has been a student at Cambridge.

The Hokkaido Railway Company held a general meeting on Nov. 29th at Tokyo. Baron Kitagaki took the chair, and after hearing reports on the business and construction works from Jan. to Sept. this year the shareholders decided to pay an interim dividend of 3 per cent and issue debentures to the amount of yen 1,160,000.

Mr. Julius Overbury, who has been resident in Japan for a few years past, died in the General Hospital, Yokohama, on Monday evening after a lingering illness of some duration. Deceased, who was 67 years of age, was a native of New York. The funeral took place on Wednesday afternoon, the last rites being performed at the graveside by the Rev. E. S. Booth.

The comparison of the earthquake registers from the four British stations—at Shide (on alluvium), Kew (on chalk), Bedston (on sandstone) and Edinburgh (on rock) show, says *Engineering*, that within 1901 and 1902 these stations registered respectively 168, 127, 228, and 155 earthquakes. Bidston records, therefore, most earthquakes, and also their first preliminary tremors; but the durations and amplitudes are smaller than at the other stations. Kew records few disturbances, and commencements are late: the Edinburgh and Shide records are similar.

France is famous for its cathedral cities, and perhaps none is of greater importance, both religiously and historically, than Chartres. "A world to explore as if one explored the entire Middle Ages," says Walter Pater; while Lowell calls the Cathedral "the most wonderful thing in France." *Travel* considers that Chartres is nothing if not a great religious centre. Long before the coming of Christ, the Druids had a grove below the very spot on which the Cathedral is now raised, and their grotto was dedicated "To the Virgin who shall bear a son." Upon this site is now the crypt called "Notre Dame de Sous Terre," and above that the Cathedral is built. These two churches, one above the other, make Chartres unique among the great cathedrals of the world.

EARLY RECOLLECTIONS OF YOKOHAMA 1859-1864.

By G. W. ROGERS: READ BEFORE THE YOKOHAMA LITERARY SOCIETY, ON FRIDAY, DECEMBER 4TH, 1903.

At the beginning of December, 1859, I left Shanghai in the American barque *Nymph*, Captain Price, bound for Kanagawa, the newly opened port in Japan. We carried a crew of fourteen, all told, and besides there were two passengers who were proceeding thither with the object of settling in business. One of these was a Mr. Sherman and the name of the other has escaped my memory. We were practically in ballast, as our cargo consisted of a few cases of goods, principally stores, and a number of boxes of specie—Mexican dollars—for trading purposes; there were also a number of live sheep in the 'tween decks. All went well for the first week or two but owing to the defective charts then in use and the presence of unknown currents we struck on a sand spit off Cape Omaisaki and became a total wreck.

The vessel went ashore about midnight, during a blinding snowstorm, and as it came on to blow very heavily from the northwest she bumped so badly that before morning her bottom was stove in; she was full of water up to the hatches, and the poor sheep were floating about, dead. Our position was critical in the extreme and the Captain called the hands to, in the endeavour to launch one of the ship's boats with the intention of rowing to land for assistance, but no sooner was it in the water than it was dashed to pieces against the vessel's side and was then cut adrift. The second boat was then got out and after innumerable difficulties, owing to the breakers, a crew managed to get into her and push off, but she had scarcely left the ship's side before she was unmanageable among the breakers and turning completely over in the trough of the sea precipitated all in the water, including one of the passengers who accompanied them. Those on board the ship were powerless to render any assistance whatever, beyond throwing the life belts and boats' oars in their direction, but they failed to grasp them and the consequence was, that four were drowned, including the passenger. The chief and third officers were picked up in an exhausted state, clinging to oars, by the crew of a large Japanese surf boat, manned by 16 or 18 men, and taken on shore. It appears from what we could gather afterwards, that our perilous position on the reef could be seen by the people on shore and they humanely had their large boats ready to render us assistance when the weather moderated, but at the time we knew nothing of this, and through the ship's glass they seemed to be hostile, as they were running to and fro, gesticulating in an alarming manner. We were now in a sad plight, the seas were breaking over the doomed ship and it was snowing nearly all the time. After two days of suffering our Japanese friends came off in a number of large boats and made signs for us to jump overboard and they would pick us up, as they could not come alongside on account of the heavy breakers. Captain Price ordered us to go aloft and out to the main yard arm, lower ourselves down from there by a rope, hang on until one of the boats came underneath and then drop; in this manner we got safely to land. Our Mate, Mr. Owen, died soon after he was rescued, for when picked up he was exhausted and almost insensible. The bodies of the other poor fellows were washed ashore during the following days and we buried them under a grove of pine trees on the beach, Captain Price saying the prayers over them.

Upon reaching the shore we were marched by two-sworded men to a sheltered place in a pine wood, where a rough tent was erected; holes were dug in the sand and fires lit, and rice, fish, and tea were brought us in abundance, as well as a goodly pile of *fulon* for sleeping purposes. A cordon was drawn round our camping-ground some distance away from the tent, and although natives came in their hundreds daily to gaze upon the first foreigners they had ever seen, order was maintained throughout by a detachment of *samurai*. We were kept there for about six or seven days

and could not exchange one word owing to neither side being able to understand what was said by the other, but by signs we were given to understand that a messenger had been sent to Yedo for instructions as to our disposal. Finally, we embarked on board a junk and came on to Yokohama Bay, which was reached on December 27th, 1859, where our *samurai* friends handed us over to the American Consul, General Dorr, and with profound expressions of gratitude on our side for their extreme kindness to us poor shipwrecked people they bade us *sayonara* and returned to their homes.

I would here mention that the ill-fated ship was owned by Gordon and Talbot, of Brooklyn, N.Y., and was despatched by Oliphant & Co., the Tong-foo Hong, Shanghai, and was consigned to the Yokohama branch house which had just been established.

My first impression of Yokohama was a dismal one. We landed from the junk in one of her small boats; it was snowing heavily at the time, and as we approached the shore the place looked the picture of desolation. Between the two short jetties, called respectively the English and Japanese hatobas, we ploughed through masses of duck-weed and kelp until a landing place could be found. One or two empty sampans were moored alongside the hatoba, but no living being was in sight, and after passing the guard-house at the entrance of the jetty we had no one to show us where to go. We waited about in the hope of meeting with some person, and later on two Europeans approached, one of whom proved to be Mr. Charles Falk, the scientific engineer of the ill-fated surveying schooner, the *Penmore Cooper*, which had recently been lost on the beach. This gentleman afterwards settled here and I will refer to him later on.

I was appointed shipping clerk to Messrs. Oliphant & Co.—American No. 24—now 52 Main Street, and for the first three or four months messed with R. B. Brower, or little Brower, as he was called—brother of D. C. Brower, who resided here for some years afterwards. He rented a Japanese house in Kitanaka-dori Sanchome, and as there were no hotels then opened our house was a refuge for the destitute. Not in the literal sense, however, but a refuge for new-comers, who had the means, but were unable to get hotel accommodation. We took in the brothers Marks, Gutschow, O. E. Freeman, H. Moss, and others until such time as they could find accommodation for themselves. The Marks's brought with them a lot of watches and being the first in the field did very well by them and laid the foundation for their future business. They afterwards started as Auctioneers, in 1863, on Lot No. 41.

The first Hotel was erected on Lot No. 70, now in the occupation of Mr. F. W. Horne. It was a bungalow with frontage on Main Street, lying a little back from the road. The front part was the billiard room and bar, presided over by Baron Macaulay, a coloured gentleman, and the rear formed the dining and bed rooms. Along the side of the lot, right down towards where Carl Rohde's premises are, were the stables, where ponies were kept for hire by the day. The proprietor was Captain Huffnagel, late master of Dent's receiving ship, the *Nassau*, and the name of the Hotel was the "Yokohama."

I will here describe, to the best of my recollection, what Yokohama was like in January, 1860. There were but few bungalows built and occupied, though several were in course of construction. Jardine Matheson & Co., were English No. 1; Walsh Hall & Co. American No. 1; Dent & Co. on Lots No. 4 and 5; De Coning, Carst & Lels in Water Street; Oliphant & Co. American No. 24; Sassoon & Co. represented by Captain Elmstone, on lot 75; Mr. Kempton on lot 73 at the corner where Langfeldt & Co. now have their premises, and a few others whom I cannot call to mind. Afterwards I remember Ed. Clarke, E. J. Benson, MacPherson and Marshall, Aspinall Cornes & Co., Geo. Barnett & Co. Kniffier & Co. Geo. Batake and Schnell, Schoyer, Peter Stuyt, Sam Maine, Downie, the brothers Loureiro, Edward and Joseph; van Reed, Joseph Heco, O. E. Freeman, Garnier, Ledermann, Nordhoeck Hegt, J. O. P. Stearns, Ellis Elias, G. Alcock, N. P.

Kingdon, representing Dent & Co., Jacquemot, F. Cope, Paul Bagley, Strachan and Thomas, R. D. Robison and others, until we could muster quite a respectable community.

The Settlement as then marked off consisted of Water Street, Main Street, and the side streets abutting. There was no Bund in those days and the sea washed up to the backs of the houses in Water Street. The frontages were in that street. The Japanese village of Honmura extended from about where No. 7 now is to the Creekside. It was a straggling village with narrow roads and something of the same appearance as the approaches to the bathing-places at Honmoku. A favourite stroll of mine was through this village, so purely Japanese and quite a novelty to one just come to the country. At the back of the Settlement, that is, from the rear of No. 90, 91/95 and 76/78 there were paddy fields extending as far as the Creekside.

The fish market was held in the Honcho right in front of where the Telephone Exchange and General Post Office now stand. There was a row of Japanese shanties on the site of the General Post and Telegraph Offices extending from Nippon-dori to Minato-bashi-dori—sake shops, macaroni shops, cheap eating-houses and the like, and it was in one of these restaurants that the first bread was made for sale in Yokohama. A cook from a French man-of-war—I think it was the *Dordogne*—taught the Japanese proprietor how to make this necessary article of food, and after succeeding in a fashion, by turning out a number of dumpling-like loaves made from Japan flour, he asked what name he was to call them by. He was told the French name was "Pain" and so it got corrupted into "Pan," the name it has since been known by. There was also a narrow street at the back called the *O kashi nagaya*, where coolies were engaged for working cargoes. This narrow street had its entrance where Sale & Co. now have their offices, and its exit in Minato-bashi-dori.

Early in 1860 a row of shops were erected on the opposite side of the way, from where the U.S. Consulate now stands, to the Water Works corner. One of these was occupied by Mr. Schoyer, or old Schoyer as he was better known, who opened here as the first auctioneer at this port, and his first auction was the sale of the clothing and personal effects of Captains Dekker and De Vos who were cruelly murdered in Honcho on Sunday, February 26th, 1860. I will allude to this later on. The next shop was Rumabe et cie, a French provision store, and the one on the Water Works corner was subsequently opened as a restaurant by John Thomas, a coloured man.

The native town comprised Motohamacho, Kita-nakadori, Honcho, Minami-nakadori, Bentendori and Otamachi, with Basha-michi on the flank. At the time I am writing of the Basha-michi was called Honcho Ichome and the *chome* counted towards the Settlement end of the town, Otamachi Hachichome being where Favre Brandt's store now is. At that corner the first Japanese washerman established himself and the foreigners' clothes were washed (*sic*) by beating them on a large round stone in the running brook which coursed past the front of his house. Close to this place and in front of the Kagacho Police Station was a Japanese burial ground, and the remains were afterwards removed and carried away by coolies in buckets to some place on the other side of the Bluff. At the back of the native settlement, that is from Favre Brandt's corner right up to Basha-michi and extending south-west up the Ota Valley, was nothing but swamp, with long coarse grass and bulrushes growing on it, and this was the happy hunting ground for the stork and the crane—the sites of Kotobukicho, Matsukagecho, Horaicho, Bandaicho, Isezakicho, and beyond were the homes of hundreds of these beautiful birds.

From Basha-michi northward to Kanagawa there was nothing but water and the sea washed up to Yoshida machi, which is the street leading to Noge hill. Besides the bridges Yato-bashi, Mayeda-bashi and Nishino-bashi, there were no others in all Yokohama with the exception of Yoshida-bashi, or as it is commonly called Kane-no-bashi at the entrance to Isezakicho. On this

side of the bridge a guard house stood, and two-sworded officials were on duty day and night; the gates were closed at night, preventing ingress and egress unless the person requiring to pass through was furnished with a permit, but they were open in the day time. Similar gates were erected where now stands the Town Hall in Honcho Ichome. The Japanese theatre was in Shibayamichi close to where the Nippon Yusen Kaisha offices now stand. The city was very sparsely populated, although natives kept gradually arriving from different provinces. There were no jinrikisha; and if we required to travel we were compelled to ride in *kago*, unless we went about the Settlement on horseback. The shops in the Honcho were for the most part curios shops, lacquered ware predominating; in Basha-michi it was the same. In the latter thoroughfare, on the right hand side near where Tokiwacho now is, was a poultry dealer's and at the back of his premises a very fair menagerie was to be seen on payment of a few *tempo*. Benten-dori extended only as far as Basha-michi and here the exchange shops were situated which were willing for a small charge to commission to change your Mexicans into *nibu kin*,—*ichibu*, *nishi*, or *ishi*, or into *tempo*, and copper and iron cash, if you needed it. There was a horse-dealer in Sanchoime named Otobi who would lend out ponies by the day or half-day and he was well patronised by the men-of-war officers who came on shore for a run. On this side of Yamatoya's shirt store there is now a Japanese bookseller, and that book store has been kept going since the beginning of 1860, for I bought Japanese coloured prints there myself very shortly after my arrival. Otamachi was a very narrow street and the houses of a poor description; several cattle dealers had their lairs in this thoroughfare, notably at Hachichome and Nichome. A shrine of Komiya was situated close to where Omiya's store now stands and round it was an open space where wrestling Exhibitions were held periodically. The Yoshiwara quarter was on the site of the Public Garden and was situated at the end nearest the Creek. One exit and entrance only was available, viz: Yoshiwara-machi, a filled-in slip of land made through the swamp, with small shops and stalls on either side and the entrance to this road was close to where Otamachi and Sakaicho now meet. The gates at the further end of this machi were guarded by *Yakunin*.

I will here relate the circumstances of the discovery of the cruel murder of the two French Captains alluded to in the early part of these notes. Their names were Captain Dekker and Captain De Vos, and it appears they had come on shore to make a few purchases when they were ruthlessly cut down. It happened on Sunday, February 26th, 1860, between 5 and 6 o'clock in the evening and at dusk. I left my home at Kitanakadori with the intention of calling on Mr. Schoyer; and, proceeding up the side street towards the Honcho where now stands Shobey's wholesale silk stores, I turned sharp round to the left when I noticed two or three two-sworded men start across the road and run up the side street alongside where now stands the Mitsui Bank. Taking but little notice of this incident I walked on until I came to where Shieno's silk store stands and lying upon the ground I saw a foreigner, who at first I took to be a drunken sailor. It was now nearly dark, but, stooping down and turning the body over, I discovered that the man was dead and minus one hand. He had a deep cut right through the shoulder, and another cut down his face severing the nose. Not a soul was in sight, but I have no doubt whatever that this murder had been witnessed by more than one person and that they had escaped into their houses to evade possible complications. Upon looking round for help I saw a second body lying at the opposite side of the road and further away. At that time a Japanese passed with a lighted lantern and by its aid I made a further search and discovered the missing hand as well as a tall silk hat. I placed the hand inside the hat and laid them beside the body and proceeded towards the Settlement to give the alarm. I reported the matter to the *yakunin* at the Machigaisho—at the corner opposite where the Town Hall now stands—and afterwards

to Thomas Troy, the U. S. Constable, and to the few gathered at the Yokohama Hotel where I knew I should find some at the billiard tables. That night a meeting of residents was called and a patrol formed. Arming ourselves with revolvers, rifles and shot guns, we patrolled the Settlement watch and watch and this continued for some time after this incident. Some time afterwards I had the misfortune to discover another murder. Riding out to Ota one day I saw a young lieutenant (French), Camus by name, lying dead in the road and in his hand was a portion of the bridle rein of his horse which had been cut right through before he fell. He had been out riding when attacked by *ronin* and his pony was afterwards caught grazing some distance away from the body. I could relate other shocking and blood-thirsty instances occurring during the early years of this settlement, notably the attack on Messrs. Richardson, Marshall, Woodthorpe, Clark and Mrs. Borrodaile. This also occurred on a Sunday, September 14th, 1862, the day the fleet came in under Admiral Kuper. Having just dined I strolled on the Yatobashi to smoke a cigar and watch the fleet come in, when I heard from one of my men that a lady without a hat had just ridden in from Namanugi by the beach at low water, having escaped from Shimadzu Saburo's men, who had cut down her three European companions, one of whom was left dead, and the others had managed to reach Yokohama although wounded. Only last night I read of Mrs. Borrodaile's death at Turbiton, England, on Oct. 17 of this year, at the age of 72. It is now clear that it was her thoughtless action in persisting in forcing her horse across the path of the advancing procession that led to the attack on the party, but this we did not know at the time, and upon the affair becoming known to the Admiral he at once decided to land an armed force from the warships and go in pursuit of and attack Shimadzu Saburo and his men at Hodogaya where they passed the night. He was overruled by Colonel Neale, H.M.'s *Chargé d'Affaires* and by the earnest exhortation of the Governor, who foresaw trouble if such a course was adopted and so the Prince of Satsuma was allowed to proceed on his journey southwards. Mrs. Borrodaile, I should remark, had a marvellous escape. A heavy blow from a two-handed sword was aimed at her head, which she fortunately avoided by quickly stooping. The stroke took her hat off, but she had the presence of mind to make at once for the beach, forsaking the high road altogether, and riding over the sand and shingle and sometimes through the water, managed to reach Yokohama, suffering only from the shock. She was paying a visit to Japan, having come up from Hongkong, and therefore unacquainted with the feeling in Yedo against the foreigner, or of the part which Satsuma had just taken in an important council just concluded in the capital. Satisfaction for the outrage was demanded of Satsuma and as it was not forthcoming, it led to the bombardment of Kagoshima (which also took place on a Sunday—all our tragedies in the early days took place on Sunday) and the destruction of his ships and junks. A monument has been erected on the spot where Richardson fell by the Japanese Government.

Coming back to 1860 it may be remarked that the trade in exports was of course very limited. I don't remember any tea being shipped until July, when Messrs. Green's *Challenger* loaded some for London. This clipper ship was commanded by Captain Killick and this was his last voyage, for when he returned to London he started business in Nicholas Lane, King William Street, with a Mr. Martin, as ship brokers, under the style of Killick and Martin, afterwards Killick, Martin & Co.

The principal articles of export for the first six months or so were copper wire for China and quantities of copper hot-water-heaters—such as may be occasionally seen in the kitchens of well-to-do Japanese; these with palm fibre, dried fish, seaweed, and Japanese swords formed the chief articles of export.

Gold *oban* and *koban* were bought for China and a handsome profit was made by those who

had sufficient Mexicans to purchase them. Copper cash was shipped in large quantities to China for this trade was carried on *sub rosa*, and the operations were usually conducted during the wee wee hours. Soon after, Mr. Kempton took an interest in Japanese rags and several sailing vessels were loaded with them for London, the *Comhahyland* the *Naval Brigade* took cargoes of them.

The Custom House was situated on the corner opposite to where the English Consulate now stands. It was a wooden bungalow-shaped building with a few wooden godowns on the compound, empty, but ready for goods subsequently to arrive. The customs officials wore the national dress and carried two swords; when they were sitting on the *talami* in front of a low writing stool the long sword was taken from the *obi* and laid down along side of them, but when leaving to examine goods at the hatoba it was replaced in the *obi*. The public sampan house was at the opposite corner, close to the wall of the Consulate, and on the back of Jardine Matheson & Co.'s premises stood a ship's boat, roofed over, where a man of the name of Kenny resided, cooking his food, washing his clothes, and sleeping in his Peggotty's ark. It appeared he had done some carpentering work for General Dorr, the U. S. Consul, and the latter had given him permission to squat there. In the end Messrs. J. M. & Co. paid him a sum of money to give up his claim.

The Governor of Yokohama-Kanagawa—or the Bungio as he was styled—lived on Noge-hill and occasionally visited the Custom House. He invariably passed through the Honcho with his retinue. Two *yakunin* formed the advance guard shouting, "*Shita ni iro; shita ni iro!*" and we betide the luckless wight who failed to go down on his knees and bow his head to the ground, for the advance men were armed, besides their swords, with a steel rod about a foot in length and say $\frac{1}{2}$ of an inch thick to which a red silk cord and tassel was suspended. This was usually kept in the *obi* and when a bystander was not quick enough to go down he was struck two or three sharp raps on the head with it. If it is borne in mind that without any exception, all Japanese then wore the hair *chomagi* fashion, it will be understood that these raps were felt for a time.

I would here remark that on my arrival (two vessels only were in the bay viz:—the sailing ship *Monica*, and the English ship *Albatross*—Captain McDonald, who afterwards settled here as Lloyd's shipping surveyor. The P. & O. Co. had the *Asof*, *Gambia*, *Ganges* and, I think, the *Coromandel*, running after a time from China ports to this. There was no communication between this and San Francisco, excepting the sailing schooner *Ila D. Rogers*; she was a smart little vessel and used to make good time across the Pacific. Later on came a number of steamers and sometime as many as six or eight were in the bay at once, but they were intended for sale to the different *Daimyo*, who purchased old boats as fast as they arrived.

As regards our food supply, for the first three months or so we had very little choice. There was no butcher's meat procurable, neither could we get a Japanese to kill a beast, and it was not until March or April, 1860, that we had our first taste of beef in this country. Cattle were very cheap and a decent animal could be bought for 5 *ryo*, or say 7 dollars Mexican, so a few of us clubbed together, bought one, and slaughtered it in a stable belonging to the Yokohama Hotel. The slaughterer was Mr. Henry Cook, the Honmoku shipwright, who had just arrived by the *Henry Ellis*, consigned to Sassoon's. The Captain's name was Bailey, who subsequently settled here as a butcher and compradore on the spot where now stands Eyton & Pratt's office. The first regular butchery was situated on the site of Singleton, Benda & Co.'s offices; this business was run by Eisler and Martindale, resold to Cameron & Co., and by them to Henderson & West. Poultry was very cheap and game cheaper. As early as 1860 pheasants could be bought for 6 *tempo* each, or say 12 cents Mexican; eggs were 1 *bu* the box, or 33 cents Mexican. Fish was much cheaper than we find it at the present day. Potatoes were 33 cents the picul, and almost all other household commodities were in proportion.

The first beef sold in the regular way by butchers was 6 cents per lb. for any part of the carcass, but 8 cents was charged for sirloin; pork 6 cents. Milk was the scarcest article of food and cost 1.00 per bottle. Ponies for riding cost 40 to 50 *bu* for a decent mount, say 14 to 18 dollars.

The whole Bluff was under cultivation, except the gullies and valleys, which were in some parts thickly wooded. I remember large fields of rape seed with its golden blossom growing on the site of the British Naval Hospital grounds, and opposite, where now stands the Public Hall. Farm houses were scattered here and there, and game was abundant all over the hills, as the Bluff was then styled, right up to Ishikawa, where the cutting was subsequently made. Pheasant, golden pheasant, hares, woodcock, wild pigeon, and other game could always be found on the Bluff.

I have had capital sport among the wild duck at the fork of the river close to the Engine and Iron Works. We used to get among them by straddling a plank and quietly paddling down close to their haunts before daylight with our guns slung across our shoulders. When the supreme moment arrived we gave a shout and upon the game rising we banged away with our two barrels and then searched for our spoil. There used to be a farm house at the time I am writing of where the timber yard now stands at the side of the Engine and Iron Works. It was built on an oasis in the swamp.

Coming back to Yatozaka and from the top of that hill, there was a narrow winding footpath which led to the Juniten shrine under Mandarin bluff at Honmoku. This was a very solitary spot and few foreigners ventured so far. It was a famous place for wild pigeon and in the avenue of firs I have had good sport with these birds. This bluff projected much further than it does at the present day, as a great portion has been cut away for road making, etc. When I first knew it, the sides were precipitous and a number of holes were excavated where the birds used to nest.

The first newspaper published in Yokohama was the *Herald*, by Mr. Schoyer, whom I have before alluded to. It was brought out by writing the copy on thin Japanese paper and this was transferred to wooden blocks by Japanese engravers and printed off on to Japanese paper for delivery. Afterward Hansard and Keele published the *Herald* from type brought from a bankrupt newspaper in Calcutta. Their office was on lot No. 78. There was also an early newspaper published by Da Roza and Da Souza and called the *Japan Times*. It will be within the recollection of many that the Mr. Da Roza alluded to was the same gentleman who recently died here.

The early banking establishments were the Chartered Mercantile Bank of India, London and China, and the Central Bank of Western India, the former on lot 78 and the latter on lot 75. Deposits were received by them and the usual exchange business transacted but the cheque system was not in vogue. The rate of exchange in those days would surprise many of the residents of to-day as it ranged from 4/9 to 5/0 and culminated in January, 1864, at exchange on London 30 days sight 5/2 1/4, at which rate I bought bills on London of the former Bank.

Before Christ Church was built, services were held in a private house by Dr. S. R. Brown with Miss Brown (afterwards Mrs. J. F. Lowder) presiding at the harmonium. I distinctly remember seeing Mr. Lowder at these services. He was then a fine, strapping young fellow, apparently about nineteen or twenty years of age. When Christ Church was built the Rev. Buckworth Bailey was the officiating clergyman. The Roman Catholic Church was built and presided over by that genial and good man, the Abbe Girard, who was indefatigable in the interests of his church and the welfare of his co-religionists. Although not of his faith, I can bear testimony to many acts of kindness and sympathy which he was always willing to perform for any one needing his assistance, and regardless of creed.

There were no lawyers in Yokohama at the time I am writing of, but a conveyancer of the name of Frederick Crutchley (a character in his way) transacted business in that line. I now have in my possession a deed he drew up for me which

is signed by him under date of August 14, 1862. The first American Consul was General Dorr, and the Consulate was a temple at Kanagawa. He was succeeded by Colonel Fisher, with Joseph Heco, interpreter, and Thomas Troyas Constable. The English Consul was Captain Howard Vyse; Mr. Lowder, student interpreter, and Edward Carlton, constable. Vyse was a magnificent specimen of British manhood. Mr. Harris was the U.S. Minister, Sir Rutherford Alcock, the British Minister Plenipotentiary, Mons. de Bellecourt, the French representative, and Graaf von Polsbroeck for Holland.

Mr. Wirgman, the artist, came out for the *Illustrated London News*, and I made his acquaintance at the first big fire when the native town was burnt out from Kitanakadori right through to the swamp. He was there sketching the ruins for the paper he represented. Soon afterwards he started his *Japan Punch*, and I call to mind one of his earliest efforts, wherein was depicted a caricature of old Kempner, perspiring freely, in the act of rolling a barrel—on the ends of which was marked "Soft soap"—up to the Consulate entrance. At the door, waiting to receive it, and smiling benignly was a capital representation of Captain Vyse. His prominent facial organ—which old residents will remember—stood out in bold relief. It was a capital bit of work and the subject was easily guessed at by Yokohamaites.

About this time Baron Von Siebold and his son Alexander visited Yokohama. The latter was a nice, smart looking youth of 17 or 18 years of age; I understand he is still living and has succeeded to the title. The firm of Oliphant & Co. withdrew their Japan branch in the middle of 1867, and I lost a good friend when Mr. Talbot, the genial manager, left to rejoin the Shanghai house.

As regards amusements, we occasionally had a dramatic company from one of the English men-of-war who came and performed on shore, and when we were so favoured, the performance generally took place in an empty godown. But with the aid of plenty of lanterns, a few evergreens, and a goodly supply of bunting, a respectable theatre was improvised. These Naval Theatians performed very creditably and I have witnessed some screaming farces in our impromptu theatres. The Middies played the female characters and for make-up and gesture were admirable.

A professional trio came in 1861, viz. Robbio and Sipp and a lady. The former was a creditable violinist and the others sang. The concert was held in the upstairs room of the Commercial Hotel, No. 86, now occupied by Geen, Evison & Co. The building had just been erected and the room where the concert was held was in an unfinished state. The proprietor was the dignified Baron Macauley. During the performance, which was rather mediocre, there was some rough horseplay indulged in by the larkish set, and I remember Sam Maine's big black retriever yelping at intervals, and afterwards discovered that this accompaniment was produced by the dog accidentally getting its tail under the heel of Maine's friend, Downie.

Outdoor recreation was pony riding, paper hunts, and shooting. Parties of ten or more, accompanied by their bettoes, would make an excursion to Kamakura and visit Daibutsu. The eatables and drinkables would be sent on by coolies in advance, and it was usual to make Kanasawa the stopping-place for lunch and afterwards proceed to Kamakura. This was a favourite outing for the Naval officers, and I have been with a party consisting of 26 horseman and the same number of bettoes, which made a decent cavalcade. We had to go armed with revolvers for our protection, but I never heard of any outrage until Major Baldwin and Lieutenant Bird met their death there.

The Yokohama Hotel was the rendezvous for those desirous of getting the latest news on current topics, and the principal subject was the *ronin* gentry. At times they were but a mile or so outside Yokohama and threatening to attack the Settlement, and we were all anxious to devise means for our escape to the shipping in the event of these people carrying out their threats. The streets of the Settlement were not lighted and

those venturing out after dark were always preceded by their house-boys carrying lighted lanterns with the numbers of their houses and nationality written in Japanese characters. For instance:—"English *go-ban*," or "American *jiu-ni-ban*," &c., as the case might be. Every resident carried a loaded revolver strapped round his waist at night time without exception. It was a curious sight to see men playing pool or billiards, or sitting at a card table, armed with these weapons, and it savoured more of a Western mining camp than anything else. House-boys crouched in the lobbies with their lanterns, ready to light them when their masters were ready and preceded them on their way home to their respective bungalows. The streets were in a deplorable condition, and during the rainy season almost impassable, as there was no drainage to carry off the surplus water and it was left to soak in or dry up. Main Street was, I think, worse than any, consequent upon having more traffic. One had to wear knee rubbers and in making one's way up this principal thoroughfare one would, at each step, sink in solid mud up to the calf of the leg. It was worse if anything round about Kempner's lot (Langfeldt's corner).

The first general store was opened by O. E. Freeman somewhere about the spot where now stands the Chartered Bank. Mr. Freeman brought the first photographic camera and accessories used for the purpose of trade, and he carried on business as a photographer for some months, taking portraits only, unfortunately, and then sold the whole turn-out to a Japanese, taught him the business, and thus took the first step in that line. With the proceeds of this profitable transaction, and with the assistance of his brother in China, he had sent over a large assortment of goods and stocked a general store where he amassed a nice fortune.

The Swamp, or Paddy-fields,—began to be filled in 1861, namely: that part at the back of the Settlement now known as China-town. The hills at the back of Motomachi, now called the Bluff, formerly extended sloping, and covered with verdure, right down to the Main Street of Motomachi, consequently there was no Nakadori as at present. The whole face of the hills was cut away for the purpose of filling in the swamp in question, and cuttings were made from the Canal inwards to allow the boats laden with earth to pass through and dump it near where it was to remain. The filling in extended from Mayeda Bashi to the Engine and Iron Works corner, and then in a line to Favre Brandt's; then in a line to the Honmura Road at the back of the Roman Catholic Church, and thence on to Mayeda Bashi the point of starting. The first house erected on this new land was that of Cameron & Co., the compradores and Naval store contractors, American *jiuniban*, now 117 Creekside. The second erection was H. Cook's (shipwright) now Lot 115, the next was Captain Bailey's (Compradore), Lot 116; and Chas. Falk, Engineer (alluded to in the early part of these notes) was at No. 113 formerly T. Rose's.

A race-course was marked off and fenced round, on the filled-in Swamp and races took place there. The Grand Stand was where Messrs. Fraser and Farley's tea firing premises stand, on Lot 143. During the race meeting in 1862 a riot occurred in the refreshment booth, kept by Baron Macauley close to the Grand Stand but nearer the Creek. A general fight took place while the racing was going on and some ten or more persons were hotly engaged, one or two of the combatants being pitched bodily into a pile of bottles of beer, spirits, and champagne which were stacked in a corner and comprised the stock. Colonel Neale, with Admiral Sir Augustus Kuper, the Consuls, and other notabilities were at the Grand Stand. The men of the English mounted Military Train, as it was called in those days, were also in attendance, waiting upon their Minister as escort, and as the riot promised to assume a serious aspect Captain Vyse, and Lieutenant Applin, in command of the Military Train, proceeded to the spot, and in a short time restored order. The men of this Military Train, by the way, wore a uniform of dark blue with white facings, quite a different style of costume to that worn subsequently

by Sir Harry Parkes' famous cavalry escort. This newly made ground was soon after staked off into lots but it was some time afterwards before building operations commenced in earnest. There being no treaty existing between China and Japan, Chinamen were not permitted to settle or engage in business, but were allowed here in the capacity of servants to Europeans and Americans. The Chinese compradore was indispensable in a business house in the early days as the want of a knowledge of the colloquial was compensated for by the use of the written Chinese character, which conveyed nearly the same meaning to the Japanese.

In 1862 there was a bungalow on the lot now occupied by Mr. Clausen—"Clausen's Hotel,"—and this was kept as a restaurant by a Russian named Peter Polovski. It was in this building that the Y. U. Club first saw the light. Lieut. Smith, best known by the appellation of "Public-spirited Smith," with a few officers of H. M. S. *Euryalus*, notably Mr. Birnie, Fleetpaymaster; Mr. Jones, Assistant Paymaster; Mr. Lowder of the Consular Service, and one or two others, conceived the idea of forming the Club, which has now grown into the palatial institution at No. 4 Bund. It was first known as the "United Services Club," but the word Services was dropped when it was found that the majority of the members belonged to the mercantile community.

After the attack on the Legation at Takanawa in 1862 Colonel Neale, H.M.'s *Chargé d'Affaires*, removed his Legation to Yokohama and rented Mr. G. Hoesy's bungalow on lot No. 20, on the site of the old wing of the Grand Hotel at the mouth of the Creek. This bungalow stood in a nice garden which was fenced in all round. The Military Train were quartered at the Naval Depot opposite.

The land in the Settlement proper, as well as the portion of the Swamp first filled in was allotted to the early settlers by the Japanese Government. An application was to be sent in through the Consulate and in course of time, if it was granted, the title deeds were forwarded to the applicant, also through his Consul, and the only stipulation attached to these free grants was that a fence should be immediately erected round the lot and a yearly ground rent paid according to the number of *tsubo*. It is needless to say, that the early applicants secured the most favoured sites, viz.:—Water-street and Main-street, whereas the later ones had to put up with lots on the filled-in Swamp. I was one of this latter category and my grant was Lot 131, now the centre of China-town. If I had been less negligent of my own interests there is no doubt that I should have been awarded a Water or Main Street lot, but at the time I was young and had not made up my mind to stay in the country. Consequently I did not trouble myself about the matter until my friend Captain Vyse, meeting me one day in 1861, outside the Consulate remarked, "George, have you received your title deeds yet?" I replied that I had as yet made no application. Expressing his surprise he advised me to lose no further time but to send it in at once and he would have it forwarded to the proper quarter, remarking also, that if I did not hurry up all the contemplated allotments would be taken up. I took his advice with the result above stated.

I heard at the time that lots were not only granted to *bona fide* residents but that people who could not by any means be classed in that category obtained valuable pieces of ground and one instance which I can vouch for, I will relate. A resident, and an early one, sent in his application for a grant; before it was entertained he was compelled, by circumstances, to leave Yokohama and there was every probability of his not returning. However, he did return and after making enquiries as to whether he had been granted a lot during his absence, found that he had, and that another man was enjoying possession of it. It was a Main Street lot and is now very valuable. To save exposure and complications the matter was compromised to the satisfaction of the *bona fide* claimant. That claimant is now living in Yokohama (1903).

I have written these jottings to show what Yokohama was like in the early days, and to tell you who

some of the early residents where, and while I have purposely refrained from touching on matters political, or of the troublous, anxious, and unsettled period under review, as these topics have been depicted by able and gifted authors from Sir Rutherford Alcock downwards, there was no occasion to allude to them. I have, with very little data to guide me, written entirely from memory and I ask the indulgence of old residents for any little error of detail that may have crept in and trust they will not criticise my effort too severely.

CORRESPONDENCE.

YOKOHAMA GENERAL HOSPITAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Committee of the Yokohama General Hospital feel deeply grateful for the cordial support accorded their recent appeal for subscriptions to the Improvement plan. They also appreciate the kind assistance of the local press, both in the editorial and news columns. The list grows daily and is very encouraging, but a considerable sum yet remains to make up the *yen* 17,000 required. Although the Committee have endeavoured to distribute copies of the report to every foreign resident in Yokohama, it is possible that some may not have reached their destination. If so, extra copies can be had upon application to Mr. M. Russell, Hon. Treas. No. 82 Settlement. Questions may also have arisen in the minds of some regarding details of the report and if so the Committee will be pleased to receive and reply to same. Letters can be addressed to the Chairman. Should any one desire to inspect the Hospital premises visitors will be welcome on Monday, Nov. 30th, or Wednesday, Dec. 2nd, between 3 and 5 p.m. when members of the Committee will be present to personally explain the situation.

Yours faithfully, for the Committee,

E. W. FRAZAR.

Yokohama, November 27th, 1903. Chairman.

HOW TO GET TO SHOJI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—When contemplating a trip to Shoji I found considerable difficulty in getting accurate information with regard to distances and time. For those of your readers who intend to visit this part of the country for the first time I offer the following notes.

Yours, etc.,

V.B.

November 25th, 1903.

ITINERARY.

Left Yokohama	Train.....	2.55 p.
Arrived Gotemba	6.20
Left Gotemba	Tram.....	6.45
Arrived Subashiri	8.45

Left Subashiri	Tram.....	7.10 a.
Arrived Yoshida	10.00
Left	Walked.....	10.55
Arrived 1st Lake	11.40
" other side	Boat	12.50 p.
" 2nd Lake	Walked.....	1.30
" other side	Boat	2.30
" Shoji Lake	Walked.....	4.00
" Shoji Hotel	Boat	4.20

Left Shoji Hotel	Pack Horses...	10.20 a.
Arrived Top of Pass	Walked.....	12.15 p.
" Tambara	4.30
" Yokaichiba	Boat	4.50

Left Yokaichiba	Boat	8.00 a.
Arrived Inabushi	1.15 p.
Left Inabushi	Train.....	2.00
Arrived Yokohama	6.46

The return trip can be accomplished in one day by walking to Omiya (22 miles) and then by train to Suzukawa, about 1½ hour, and then by train to Yokohama.

NIPPON RACE CLUB.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you permit me to make use of your valuable space in order to ask the Committee of the Nippon Race Club if any prizes will be distributed for the Autumn meeting, as up to to-day nothing has been heard from the Treasurer of the Club.

I am, dear sir, yours faithfully

OWNER,

Yokohama, Dec. 1st, 1903.

YOKOHAMA GENERAL HOSPITAL.

MAURICE RUSSELL.
Hon. Treasurer.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE BALKAN REFORMS.

London, November 27.

Before assenting to the reforms the Porte has begged Austria and Russia to modify the scheme and has received an absolute refusal, the Russian Ambassador yesterday repeating the refusal in strong terms in a note. The Porte's attitude has since completely changed.

RUSSIA AND THIBET.

London, November 28.

Russian papers are constantly discussing the British expedition to Thibet and enlarging upon its effects, direct and indirect, upon Central Asia generally, because, in their opinion, it will establish British prestige to the detriment of Russia. The papers further dwell upon the necessity of thwarting the ambitious designs of Great Britain.

JAPAN AND MANCHURIA.

The *Morning Post* understands that there is no truth in the reports that Japan is ready to abandon Manchuria in return for a free hand in Korea.

RUSSIA'S PREPARATIONS.

London, November 29.

Three-fourths of the Russian fleet is now massed in or moving towards the Pacific.

There is practically nothing left in European waters.

THE PORTE AND THE REFORMS.

The Porte's acceptance of the reforms relieves the momentary tension, but there are difficulties in the execution of the scheme such as offer frequent opportunities for dilatory tactics in the future.

THE TSARINA.

London, November 30.

The Tsarina is better.

THE DREYFUS AFFAIR.

The Dreyfus affair has been revived, an application having been made to the Minister of Justice for a revision of the sentence. The Minister of War stated that he had made a personal examination of the *dossier* and he reported that he had discovered serious forgery and abstraction of important documents, under the Ministry of War in 1897 and 1898. It has been decided that the Minister of Justice will appoint a commission to revise the case.

THE KAISER AND YACHTING.

The German Emperor has withdrawn his offer of a cup for an Atlantic yacht race. He says that his ill-health prevents him from giving the necessary time to the arrangements. He will offer the cup, however, in 1905.

RUSSIA PREPARING.

London, December 1.

The *Daily Telegraph* says that Russia is negotiating for the purchase of the two battleships which Chile had built in England.

It is suggested that Russia wishes to prevent Japan from acquiring these ships. Moreover Russia intends to spend large sums upon new ships.

THIBET.

Later.

It appears that there is an understanding between Great Britain and China in the sense that the former (?) shall hold Thibet against Russia in the event of necessity.

Reuter learns that the Thibet expedition will advance to Gyangtze and will then attempt to reopen negotiations.

Neither the permanent occupation of Gyangtze nor any advance upon Lhasa is contemplated at present; the date of the advance is not fixed.

THE FAR EASTERN QUESTION.

London, Dec. 2nd.

In diplomatic circles in Berlin it is believed that Russia and Japan will settle their differences in a friendly manner. A later telegram from St. Petersburg says that at the weekly reception of diplomatists Count Lamsdorff spoke in a most optimistic way about a settlement with Japan. He spoke also hopefully about a settlement in Macedonia.

THE FAR EASTERN CRISIS.

London, December 3.

Telegrams from Paris published in New York say that Japan and Russia have practically agreed upon the basis of a treaty settling the Far Eastern situation.

GERMAN FINANCE.

The German Estimates for 1904 confirm the most pessimistic anticipations. The deficit will be increased under various heads, including the army and the navy and the expedition to East Asia. It is proposed to balance the budget by a loan of 103½ millions sterling.

PANAMA AFFAIRS

Later.

The Junta at Panama has signed the Canal Treaty, completing the ratification so far as Panama is concerned.

RUSSIA AND JAPAN.

Circumstantial reports emanating from Paris of a pacific settlement and the arrangements of the terms of a treaty between Russia and Japan have created a stir throughout Europe. It is impossible to state whether they are true or false but the general opinion is that they require to be received with caution. The Japanese Legation (?) in London has not received any confirmation of the reports.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH NEWS.

Saigon, December 3.

The discussion of the Budget continues in the Chamber. With reference to the Naval Budget, several speakers attacked the acts of the Minister. M. Pelletan refuted the charges and obtained an order of the day approving of his administration by 292 votes to 24.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

NEWCHWANG.

Newchwang, November 28.

During the past 4 or 5 days ice has been forming in the Liao River, and from to-day the entry and exist of vessels are altogether stopped.

(FROM THE "DEUTSCHE JAPAN-POST.")

THE CZARINA.

Berlin, November 27.

The symptoms of the Czarina's typhus have become purulent, but are not considered dangerous by the physicians.

MR. CHAMBERLAIN'S POLICY.

The prospects of Mr. Chamberlain's tariff policy in England begin to brighten.

ENGLAND AND RUSSIA IN THE NEAR EAST.

Lord Curzon, Viceroy of India, during his visit to Persia has been heartily welcomed by the official newspaper in Teheran.

The *Figaro* writes that he probably has demanded the erection of a telegraphic line from India to Bunder Abbas (situated in the Gulf of Oman). The Russian press publishes indignant articles concerning Russia's scarcity of cable lines in comparison to the English. Russia recently obtained some fresh commercial concessions in Afghanistan.

THE PORTE'S ACCEPTANCE.

The adoption by the Sublime Porte of the Macedonian reform programme drawn up at Murzsteg is considered to be important, because it improves the relations of the great Powers among themselves. Especially, it removes the separate actions hitherto favoured by the English with the French and Italians.

WAR RUMOURS FROM THE FAR EAST.

The sensational despatches concerning the situation in Eastern Asia published in English and Russian papers are nowhere taken in earnest.

THE GERMAN COLONIES.

Berlin, November 29.

The Budget of the German Colonial Office sets aside the contributions of the Empire towards the Pacific colonies of Germany as follows:—

	Mark.
German New Guinea.....	907,500
The Caroline Islands.....	168,400
The Samoan Islands.....	235,450

For Kiaochow territory the income is estimated at 505,300 M., the contribution at 12,583,000 M.

The yearly expenses for Kiaochow amount to 5,362,748 Marks, viz. for the Civil Government 984,504; Military expenses 2,404,356; General expenses 1,973,888; Expenses for the current year will be 7,697,000 M. among other:—

Building of the commercial harbour.....	1,784,000
Overground and underground workings...	473,000
Dwellings.....	100,000
Water regulation and foresting.....	80,000
Armaments.....	550,000
Sea Marks.....	40,000
Acquisition and completion of the electrical work.....	220,000
Rate for the dock.....	1,500,000
Reserve funds.....	29,552

MUKDEN.

Berlin, December 1.

The reoccupation of Mukden by the Russians is stated to have been caused by China refusing to discharge an undesirable Taotai.

THE KAISER.

The health of Kaiser Wilhelm continues favourable. The alarming English and French reports are incorrect.

BISHOP ANZER.

It was reported that the sudden death of Bishop Anzer after his reception by Pope Pius, was caused by a bad reception and subsequent excitement on account of same. This statement is nonsensical. The Bishop was most cordially received by the Pope and also by the Papal Secretary of State and by the Prefect of the Propaganda. The question who will be his successor in China will be very difficult.

DREYFUS.

The Dreyfus case will be reopened shortly.

(FROM THE "JIJI SHIMPO.")

RUMOURED HUMILIATION OF JAPAN.

London, Nov. 28.

A rumour to the effect that Japan has recognized that Russia possesses great interests in Manchuria is repeatedly circulated in St. Petersburg. The rumour adds that the conditions proposed provisionally by either side are intended to resolve the present controversy, and that with this in view and to arrange for a final understanding with reference to the assurance of Chinese sovereignty, Japan is satisfied to suspend the questions involved in the proposed provisional conditions. This news is officially contradicted.

RUSSIAN WAR PREPARATIONS.

Three-quarters of the Russian fleet have been despatched to the Far East, and in fact few ships are left at home. There is also information to the effect that trains for the East are still filled with troops and munitions.

ANTI-AUSTRIAN DEMONSTRATION.

Serious demonstrations of the Anti-Austrian party have taken place at Rome, Genoa, Turin, and Bologna.

At Innsbruck, Austria, a serious movement has also occurred with regard to the demand for the establishment of an Italian College.

MANCHURIA AND THE UNITED STATES.

London, November 30.

According to the Washington correspondent of *The Times*, the United States are displaying much sympathy toward Japan. The Government of the former is exhorting Russia to execute her promises, which she has so far declined to carry into effect.

TURKISH CONSCRIPTS.

The Sultan has decided that the term of service for conscripts shall be three years. The Turkish army will receive an addition of 250,000 soldiers.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 12TH, 1903.

BIRTH.

On the 6th inst., at No. 1, Yokohama, the wife of HENRY KESWICK, of a Son.

MARRIAGE.

On November 18th at 4 p.m., in St. John's Cathedral, Hongkong, by the Rt. Rev. Bishop Foss, D.D., assisted by Rev. F. T. Johnson, M.A., Chaplain of the Cathedral, and Rev. W. Gurney, M.A., ALEXANDER JAMES MACKINTOSH, eldest son of the late Venerable Archdeacon Shaw, of Tokyo, to EVA GRACE VIOLET, fourth daughter of the Rev. John N. B. Woodroffe, Vicar of All Saints', Forest Gate, London, E.

SUMMARY OF NEWS.

THE Imperial Diet was formally opened by the Emperor in person on Thursday. The Speech from the Throne declared the existence of relations with foreign Powers more intimate and friendly than ever, and the progress of international negotiations conducted by Japan with circumspection and prudence. A reply to the Throne was submitted to the House later by the President, Mr. Kono Hironaka, in which comments on the tenporizing policy of Ministers at home and their failure to avail of opportunities abroad were introduced among the usual complimentary and loyal expressions. The House passed this with applause and authorised the President to present it to the Emperor. The result of this is still uncertain.

THE Empress is reported to be indisposed.

VISCOUNT TSUGARU, who has been ill for some time, passed away on Dec. 7th.

THE *Asahi* states that the warship *Tatsuta* has been on fire, serious damage being caused in the

engine room. She is now undergoing repairs at Kure.

ELEVEN junks have been missing since Dec. 3rd from Nakatsu near Nagasaki.

A CHINAMAN was arrested on December 6th in China-town, Yokohama, for carrying opium.

H.H. THE RAJAH OF KAPURTHALA, who is now at Kyoto, is expected to leave Kobe on Dec. 14th for home.

THE warship *Fuso* is to try wireless telegraphy between Tateyama, Enoura and Shimidzu, and Yokosuka.

ADMIRAL Sir Cyprian Bridge left Nagasaki on Dec. 7th by the warship *Alacrity* for Shanghai, homeward bound.

THE Ameer Habibullah of Afghanistan has expressed a wish to go to India and visit Lord Curzon, the Viceroy.

ANOTHER duel is reported near Manila. This time it is said two American soldiers fought, one of whom was shot dead.

TELEGRAMS from Kanazawa and other north-eastern districts announce that snow fell there on the night of December 2nd.

SIR FREDERICK TREVES, the distinguished surgeon, was to leave London for India on the 13th ult. His tour will extend to Japan and America.

FORTY-THREE cases of dysentery were reported on December 7th at the village of Iwashina, Shizuoka prefecture, and eight ended fatally.

FRENCH railway engineers surveying in Yunnan are reported to have been attacked in Lingancho and narrowly escaped with their lives.

I. YAMADA, living at the village of Saito, near Kanagawa, found on Dec. 7th about 70 old gold and silver coins while ploughing in his field there.

JUDGE T. HARADA, president of the 1st section of the Court of Cassation, who was suffering from cancer of the stomach, died on Dec. 2nd. He was 63 years old.

M. BEAU, Governor-General of Indo-China, leaves for France in April and will not return to the East. His successor will be M. Doumergue, Minister for the Colonies.

PRINCE ADALBERT, third son of the Kaiser Wilhelm, arrived at Nagasaki on Dec. 4th by the warship *Hertha*. He left for Kiaotschou after passing a night at Nagasaki.

THE Singapore authorities are taking precautions against a threatened anti-electric tramway demonstration by the ricksha coolies. The matter is regarded as serious.

THE Kanagawa Prefectural Assembly held a meeting on Dec. 5th and the budget for the next fiscal year was submitted. The gross total of the expenditure is yen 173,680.

MR. J. PIERPONT MORGAN has acquired Aldenham House, Hertfordshire, from Mr. Van Raalte, and it is said he intends to reside in England for a considerable part of the year.

THE Tokyo-Yokohama Electric Tramway Company will hold a general meeting on Dec. 19th at 1 p.m. A dividend for the half-year will be declared at 2½ or 3 per cent.

A REPORT with regard to the doings of a highwayman is given by the Tobe police. On Dec. 2nd at 4.30 p.m. as Take Ito (45) was on her

way to Kuboyama, Yokohama, passing behind the well-known Buddhist temple, Venkakujji, a robber armed with a short sword appeared and robbed her of money.

A JINRIKISHA-COOLIE found a gold ring in his vehicle on Dec. 5th after having carried a foreign lady to the English Hatoba, Yokohama. He handed it to the Harbour Police.

OWING to the high waves, three lighters carrying coal from Yokohama to the German warship *Hansa*, which is lying at Uraga, capsized on Dec. 3rd off Yokosuka. One of the sendoes is missing.

THE inquest on the body of Miss Hickman, the woman doctor who was missing for ten weeks in London, concluded on the 12th November. The jury brought in a verdict of suicide whilst insane.

THE construction of a motor tramway between Nagaoka and Yuzawa, Niigata Prefecture, with a capital of yen 100,000 is spoken of. The promoters have applied to the Department of Home Affairs for a charter.

VISCOUNT GOSCHEN, M.A., Hon. D.C.L., Hon. Fellow of Oriel College, succeeds the late Marquess of Salisbury as Chancellor of Oxford University. Lord Rosebery refused to be nominated in opposition to Viscount Goschen.

PRINCE KONOYE, former President of the House of Peers, who has been under treatment at the hospital of the College of Medicine, removed on Dec. 6th to his house. The *Asahi* reports that his state is not so serious as recently rumoured.

THE *Asahi* states that K. Shoji, interpreter of the French Consulate at Kobe, and two others have been arrested on a charge of having attempted to obtain yen 5,000 from I. Nakanishi, a wealthy merchant living at Naka-yamate-dori in that city, by fraudulent means.

A TELEGRAM from Morioka announces that the Iwate Commerce and Industry Society decided on Dec. 5th to support the tobacco monopoly proposed by Government. They will shortly present to the Minister for Agriculture and Commerce a statement with regard to their views.

THE REV. R. F. COBBOLD, who recently married the youngest daughter of the late Sir Harry Parkes, and who was formerly Chaplain of Hong-kong Cathedral, during which time he paid several visits to Japan, has been presented by his College to the living of Beechampton near Stony Stratford, England.

ACCORDING to the steamer *Tatekumi Maru*, which arrived at Nagasaki on December 3rd from Chinese waters, K. Hanada, one of the passengers of the ship, was arrested at Vladivostok by the Russian customs officials. It appears that he was carrying forged Russian notes amounting to 17,000 roubles which were found at the examination on his landing.

A PROPOSAL to establish the Takasaki Water Works at an estimated expense of yen 570,000, was submitted on Dec. 2nd to the Prefectural Assembly. Mr. Aoki, Secretary of the Local Government, was present and gave lengthy explanations with regard to the necessity of the works, after which the draft was discussed. It was at last rejected by a majority of votes.

SOME fifty coolies living at Miyoshi-cho, Yokohama, who were rendered homeless by the recent fire, made a demonstration on Dec. 4th by way of asking the police and the municipal office for relief. Some of their number also went to the private residence of the mayor and presented their request. They were dispersed by the police and one of them was taken to the Kotobuki-cho station.

DOMESTIC POLITICS.

Saturday, December 5.

At the grand meetings of the *Seiyun-kai* and the Progressists on the 3rd instant, the leaders of the two parties delivered addresses so uniform in character though, of course, different in language, that some previous consensus seems an unavoidable inference. Both statesmen dwelt upon a special feature of the present political situation, a feature which is thus brought unexpectedly into the foreground, namely, that there exists in Japan a coalition which has for object the discrediting of parliamentary institutions, and which, while itself bearing the form of a party, works all the while to undermine the influence of parties. Marquis Saionji alluded to this coalition as having the reality of a party without the outward semblance of one, and Count Okuma spoke of it as a "secret coterie." Possibly these utterances may seem obscure to persons unfamiliar with the course of Japanese domestic politics during the past fifteen years. The facts may therefore be briefly explained by saying that what Marquis Saionji and Count Okuma intended to convey was a challenge to the advocates of Imperial Cabinets as opposed to party Cabinets. We are confronted, in short, by an old problem in a new guise. For years we have been hearing of *seito naikaku* (party cabinets) and *sekinin naikaku* (responsible cabinets) as contrasted with *chosen naikaku* (independent cabinets). So long as the issue took that shape it was a question of constitutional interpretation, inviting legitimate argument. But the two party leaders now go a step farther. They assume that the rendering of the Constitution admits of no query, and they denounce as public enemies and as corrupters of political morality the statesmen and their followers who advocate the other reading. Thus the conflict enters a sharper phase, but in reality the point at issue is not altered. As to division of responsibility for the corruption now undoubtedly existing in political circles, history will have to hold the scales. They are too heavily weighted with prejudice and affection to permit any impartial verdict at present.

Concerning the burning question of the moment, the Russo-Japanese question, the two leaders showed the same signal concurrence of views, the sole difference being that Count Okuma, as is his wont, used more uncompromising language than Marquis Saionji. Both agreed that the nation had waited long enough for a settlement and that some resolute steps to obtain one must now be taken. Concerning this it must at once occur to all publicists to ask, whom or what does the *Seiyun-kai* represent. Quite certain is it that the policy of the Cabinet with regard to the Manchurian complication, when formulated some months ago, had the endorsement of the Elder Statesmen and the approval of the Sovereign. Marquis Ito is the leader of the Elder Statesmen: he is, in effect, the leader of all Japanese statesmen. Marquis Saionji is his lieutenant. Are we then to understand that Marquis Saionji, when he invited his followers to demur to the Ministry's procrastinating methods, intended on behalf of his illustrious chief to advocate a more peremptory front in foreign politics? That is a perplexing query. What we are ourselves disposed to think is that both Marquis Saionji and Count Okuma, having their fingers on the national pulse, recognise that it beats nearly at the fever point of impatience, and that no political

party claiming to represent the people can pretend to ignore that state of affairs. But probably both leaders are fully sensible of the danger of swopping horses in mid-stream.

The third main issue concerning which a plain consensus was shown is the old old question of administrative and financial reforms. Who is not weary of this? Who did not long ago begin to doubt the possibility of the radical reforms demanded; a doubt founded on the fact that whatever Cabinet approached the problem, performance fell far short of promise? Marquis Saionji and Count Okuma both named virtually the same figures. They said that while the Cabinet promised retrenchments aggregating some 15 or 16 million *yen*, the sums actually saved in the Budget did not exceed one-third of that amount. To be sure that is disappointing, and it would seem that Count Katsura spoke off the book when he buoyantly declared, on the occasion of the celebrated compromise, last spring that he proposed to apply the ax not the knife to this work of reform. We can only endeavour to retain a hope that there is a possibility of the great things demanded. But we can not forget one thing: we can not forget that the question of retrenchment has been a burning issue for fifteen years, a question which had entered the field of practical politics or ever the Diet met, and that Ministry after Ministry has tried its hand on it. What is the aggregate of their endeavours? A very formidable figure we imagine. The Katsura Cabinet's new retrenchments of some 5 millions come by way of supplement to their previous retrenchments of 3 millions. And so it has been again and again. The total would make a big figure. Meanwhile the people are justly conscious that they are paying out hardly earned money to support an entanglement of red tape in which nine things out of every ten get hopelessly tied up.

After the two parties had concluded their meetings and the collateral convivialities, a meeting took place between the leaders, Messrs. Matsuda and Hara representing the *Seiyun-kai*, and Messrs. Oishi and Inukai the Progressists. Mr. Kato Takaaki was also present and probably might have reflected *quorum magna pars fui*. Exactly what took place is not yet known, but there appears to be no manner of doubt that the ranks of both parties will be closed up in the Diet, and that they will march in unison, but whether to a destructive attack on the Cabinet on to the dissolution of the Lower House, we know not.

There have been rumours of a solution of the Cabinet's cohesion in the face of the parties' coalition, but if anything of the kind threatened, it has been averted. The Cabinet is pursuing in foreign affairs a policy that is endorsed by all the responsible elements of the State's polity, and whatever compromises experience has taught us to expect in parochial matters, foreign affairs will on this occasion stand secure against change.

According to statistics compiled at the Affairs Office in the House of Representatives, the following is the schedule of the various parties and coteries:—

Imperialists	18 members.
Chusei (Middle) Club.....	32 "
Progressists	91 "
<i>Seiyun-kai</i>	123 "
Doshi Kenkyu-kai (Mr. Ozaki's followers).....	20 "
The Hayashi-ha (Mr. Hayashi Yuzo's followers).....	23 "
Independents	64 "
Total.....	376

It is stated that the well-known tobaccoist, Mr. Iwaya Matsuei, so far from opposing the Government's tobacco-monopoly scheme, has actually memorialized in favour of it. By way of retaliation the Tobaccoists Union are said to be contemplating the adoption of a resolution pledging themselves to have nothing to do with the sale of Iwaya's manufactures. Mr. Iwaya's memorial is attributed by some observers to the condition of his business which is not said to be very flourishing.

Monday, December 7.

The Progressists have appointed Dr. Hatoyama to be their leader in the Diet, a post now held by Mr. Inukai, who has resigned on account of ill-health. It was upon Mr. Oishi that the Party's choice fell by election for Mr. Inukai's successor, but Mr. Oishi also pleads ill-health and thus Dr. Hatoyama, the recipient of the next greatest number of votes, has been nominated.

The *Seiyun-kai* have appointed Mr. Matsuda Masahisa and Mr. Hara Kei to be their leaders in the Lower House. Presumably the idea is that these gentlemen will serve day and day about.

It was also decided by both parties that Mr. Kono Hironaka should be elected President of the Lower House, and his election duly took place when the House came together on the 5th instant, Mr. Kono receiving 350 votes.

Tokyo newspapers confidently state that the *Seiyun-kai* and the Progressists have now definitely decided to coöperate in the Lower House for an assault on the Ministry, and that they will commence by impeaching the Cabinet with reference to its conduct of foreign affairs, the method of procedure for that purpose being left to a committee for determination. The *Seiyun-kai*, doubtless as compensation for agreeing to Mr. Kono Hironaka's nomination as President of the House, will choose from their own ranks the Chairman of Committee of the whole and the Chairman of the Budget Committee.

The *Asahi Shimbun* alleges that the Parties are quite determined to conduct their attack against the Ministry in the most resolute manner, irrespective of any use that the latter may make of the weapons at its command. Our contemporary further affirms that the most influential men in both Parties are looking forward not merely to coöperation but to coalition, and that probably before the end of the year each will dissolve its present organization by way of preliminary to fusion with the other. Meanwhile, in connexion with the agreement to impeach the Cabinet, it is expected that there will be some reduction in the strength of each Party, but they nevertheless count on a solid majority inasmuch as they will have the support of the newly-formed Doshi Kenkyu-kai. The latter is an association under the leadership of Mr. Ozaki Yukio. It includes in its ranks Mr. Okuda Yoshito, formerly Chief of the Legislative Bureau, whose candidature for Kanagawa Prefecture in opposition to Mr. Shimada Saburo attracted so much attention last spring. Through, it is said, the influence of Mr. Okuda, Mr. Kato Takaaki has been induced to join the Doshi Kenkyu-kai, which, according to Mr. Ozaki's account, is to perform the function of a link between the *Seiyun-kai* and the Progressists, but which will of course exercise its vinculum influence chiefly for anti-Cabinet ends.

Meanwhile the Government's purpose remains a subject of speculation. Some predict that the Ministry, without waiting to

be questioned, will take the Diet into its confidence as far as prudence permits. Others assign to the Cabinet a conviction that since the situation does not admit of being explained fully, no kind of explanation will be offered, and if the Parties attempt to pass a vote of want of confidence or to address the Throne, suspension will follow.

We need scarcely add that there is the usual talk about bribery and corruption, and that the number of members said to have been already Walpoled is actually stated to a unit.

The new political party under Mr. Hayashi Yuzo has not yet given itself a name. The members held a meeting on the 5th when Mr. Hayashi announced that at present their unique purpose should be to march side by side in the Diet. Count Itagaki made a speech, the gist of which was that none of the political parties now in existence recognised the importance of socialist reform, and that the Government seemed to be without any adequate appreciation of the crying need of administrative and financial reforms. He considered that the existing parties were on the verge of ruin, having lost alike credit and character. Thus the time had come for a new association. He himself could not openly join the party, but he promised to work for them with all his strength.

Tuesday, December 8.

The various sections of the *Seiyu-kai* entertained Marquis Saionji at the Maple Club on the 5th instant at 3 p.m. Baron Okauchi made a speech strongly eulogising the services rendered by the Marquis to the Party and noticing that some of the old members were returning and that new members were enrolling their names. He then referred to the declaration of the Marquis on a recent occasion that the pending session of the Diet was fraught with issues of the gravest importance alike in foreign and in domestic politics. The Party would follow their leader's behest; namely, they would leave the Government a free hand unless the latter's procedure seemed to menace the country's vital interests or its honour, in which event they would discharge their duties as a political party.

There was a certain vagueness in this part of the speech; an intentional vagueness we presume. The speaker left it more or less uncertain whether his Party would continue to observe reticence and forbearance, or whether they merely claimed to have acted that role sufficiently in the past.

Marquis Saionji's reply was simply an acknowledgement of the compliments paid him and a deprecation of their tone.

Mr. Matsuda Genji, however, on behalf of the non-parliamentary members of the Party, intimated that he and his colleagues believed themselves to be about to engage in a final struggle with the representatives of personal cabinets.

Marquis Saionji disclaimed any intention of having suggested an actual struggle.

Out of 329 members composing the Upper House, the political complexion of 257 is said to be known. It is as follows:—

Kenkyu-kai.....70, under Marquis Kuroda; pro-Government.
Doyo-kai.....62, under Prince Nijo; anti-Government.
Unaffiliated.....44, under Viscount Matsudaira; pro-Government.
Chawa-kai.....33, under Baron Funakoshi; pro-Government.
Mokuyo-kai.....27, under Baron Senge; probably pro-Government.
Teiyu-kai.....21, highest tax-payers; pro-Government.

This table shows a very large majority in favour of the Cabinet, the total of the pro-Government peers being 195.

The journalists of Tokyo who represent the opposition to the present Cabinet, are planning a grand meeting of newspaper men to be held in the capital next week, representatives of the press in all parts of the empire being invited. It is hoped by the planners of the meeting that a resolution will be adopted calling for a change of Ministry on the ground that the present Cabinet, by yielding and hesitation, has seriously imperilled the vital interests of the State.

Wednesday, December 9.

Nobody can be much surprised to learn that in the ranks of the Progressists there have arisen men who regard with dissatisfaction the coöperative union of their Party with the *Seiyu-kai*. To onlookers it certainly did appear that the Progressists were relegated to a very undignified place in the sequel of their last experiment with the *Seiyu-kai*. When the moment arrived for consummating the presumed purpose of the coalition, namely, the overthrow of the Cabinet, it was suddenly found that the *Seiyu-kai* had effected a compromise with the Government, and thenceforth the Progressists descended to the place of the proverbial cat's tail which has no ostensible utility. But in the sequel of that incident the *Seiyu-kai* suffered from something very like disintegration, and now on the eve of the Diet's session they find themselves deprived of their pride of place as wielders of a majority of the whole. Therefore once more they hold out hands of friendship to the Progressists, hands which have apparently been clasped by the latter's leaders. What is to be the result, however? That is the question which evidently exercises the intelligence and perturbs the minds of a section of the Progressists. Thirty-one of them, all members of the Lower House, have held a meeting, and passed a unanimous resolution that a covenant of coöperation with the *Seiyu-kai* is against the interests of their Party and will only result in fresh discomfiture. Therefore they demand that a general meeting be called to discuss and decide the radical query of coöperation or independence. Then there is another though smaller section who harbour discontent because the presidency of the Lower House is the only price paid for the Party's union with the *Seiyu-kai*. But throughout all this discussion it is not difficult to detect a general note of uncertainty as to the course that the leaders intend to pursue with regard to the problem of foreign policy. We have already given our reasons for thinking that, as regards that problem, there can be no efficient coöperation between the two parties; their declared views are too glaringly divergent. If, on the other hand, they can not wield that weapon destructively, what weapon are they to wield? Can they conscientiously, or with any semblance of conscience, drive from office on some parochial issue a Cabinet to which they are willing to entrust the direction of a vital national problem? Such, it seems to us, are the reflections which really disturb the minds of the Progressists. Messrs. Komuchi and Hiraoka have a strong case when they recall the experiences of the past as witnesses against the abortiveness of coöperation; but their influence would be comparatively insignificant could the two Parties feel assured of marching to victory. They have no such assurance.

Thursday, December 10.

The agitation against avowed coöperation between the Progressists and the *Seiyu-kai* continues. A strenuous attempt has been made, it is said, to effect a union between the followers of Mr. Hayashi Yuzo and those of Mr. Komuchi, both of whom are opposed to the coöperative arrangement, but this attempt has failed. Meanwhile another coterie of younger members of the Progressists have declared themselves opposed to coöperation, which they regard, not without some justice, as practical self-effacement. The *Seiyu-kai*, on the other hand, seem to be standing quiet and collected. They are probably aware that their own intentions do not extend to a mortal struggle.

Concerning this last point, the *Asahi* publishes an alleged statement of Marquis Saionji which exactly bears out the forecast independently made by ourselves. The Marquis, being asked about the limits of the coöperative intentions of the two parties, declared it an error to suppose that they had agreed to use foreign politics as a weapon for attacking the Government. What the *Seiyu-kai* intended to do was to ask questions, and to take the answers as guides in shaping their ultimate attitude. We really do not see how the *Seiyu-kai* can go any further, whether their connexions be considered or their duties as a responsible political party.

Baron Suyematsu, on the ground that he is fully occupied collecting materials for writing the history of the Mori Family, has resigned his position as chairman of the *Seiyu-kai*'s Council. Baron Kaneko, on the ground that he is weary of the wrangling of political parties, has resigned the chairmanship of the Party's Special Committee of Investigation. The former Baron is at Nara; the latter at Zushi.

The *Seiyu-kai* have not made any conspicuous display of strength in influencing the organization of the Lower House. The following table, which we take from a vernacular contemporary, shows the numbers of various parties as represented in the Sections:—

No. of Section	Total Number.	Seiyu-kai.	Progressists.	Independents.
1.....	42.....	18.....	9.....	17
2.....	42.....	17.....	15.....	10
3.....	42.....	14.....	9.....	19
4.....	43.....	22.....	5.....	16
5.....	42.....	13.....	9.....	20
6.....	41.....	17.....	12.....	12
7.....	42.....	10.....	6.....	26
8.....	41.....	11.....	9.....	21
9.....	41.....	14.....	8.....	19
Total ...	376.....	136.....	82.....	160

It has to be remembered that the so-called "Independents" include all the followers of Messrs. Ozaki Yukio and Hayashi Yuzo, as well as the National Unionists.

Friday, December 11.

The Progressists have tided over their difficulty for the moment at all events. A *via media* seems to have been found in the suggestion that coöperation should not be confined to the *Seiyu-kai* and the Progressists alone, but should extend to all fellow-thinkers. That appears to be rather an invertebrate kind of arrangement, inasmuch as it scarcely touches the main source of trouble. The malcontents are understood to base their complaint on the issue of the last agreement with the *Seiyu-kai*, when the Progressists found themselves gazing into a vacant space where their supposed allies had once stood, and listening to the echoes of a compromise between the latter and the enemy whom both had

united to overthrow. It can not be denied that a new agreement of cooperation has now again been concluded. The fact stands, whatever attempt be made to obscure it by unaffiliated fellow-thinkers. However, the main line of cleavage is to be found, we think, in the divergent attitudes of the two parties towards the problem of the day. Any attempt to walk together must either over-strain the one or dissatisfy the other. Already, indeed, there are evidences that whatever temporary lull may have taken place with regard to the co-operative contract, there is as yet no generally working arrangement. For whereas the Progressists, the *Seiyu-kai* and Mr. Ozaki's followers have combined to put forward Mr. Haseba Junko as their candidate for Chairman of Committee of the Whole House, the malcontents are putting forward Mr. Komuchi Tomotsune. Meanwhile there is much talk of commotion in the ranks of the *Seiyu-kai* themselves. Saturday will see the denouement, or at least will show the outlines of it. For to-day (Friday) will be devoted to replying to the Speech from the Throne and electing the Chairmen of Committees, and thus the real business of the session will not commence until Saturday, when the Prime Minister and the Minister of Finance are expected to deliver speeches.

The *Jimmin* calculates that under no circumstances can the Government hope for a majority. It gives the following estimate:—

OPPOSITION (CALLED "PEOPLE'S PARTY" BY OUR CONTEMPORARY).	
Seiyu-kai	128
Progressists	25
Mr. Ozaki's followers (Dōshi Kenkyū-kai)	19
Independents	10
Total	242
GOVERNMENT'S SUPPORTERS.	
Imperialists	18
Neutrals	33
Kōyū Club (Friends)	25
Unaffiliated	68
Total	144

It is to be observed that in the ranks of the Opposition this estimate includes all the discontented members now agitating against cooperation. There is a difference of 49 as these figures stand; that is to say, if the Opposition lost 49 and the Government's supporters gained that number, the strength of each would be equal.

But after the above was in type we are confronted by the complication of the Lower House's reply to the Speech from the Throne. There is no occasion, we think, to count heads or predict future doings in the Diet. The next step for the members will be to pack their portmanteaux.

FOREIGN POLITICS.

Saturday, December 5.

Reuter's agents have seen reason to telegraph an item of intelligence which loses rather than gains by such distinction. For it is simply a matter of course that the British Representative in Washington should convey from his Sovereign to the President, and that the President should return to King Edward, expressions of the most cordial good will. To flash such news over the wires invests it with some character of novelty, and to that extent impairs its grace. But perhaps special note has been taken of the fact that Sir Mortimer Durand is the first full-fledged Ambassador accredited by England to the United States. Hitherto the practice had been to appoint a Minister to the Washington Embassy, whereas Durand

had been Ambassador at Madrid since 1900. Perhaps, on the other hand, Reuter was deficient in material. Under all circumstances we object to the notion that an interchange of friendly greetings between England and America should be treated in any sense as an event.

Monday, December 7.

It really seems to be plain deception that the Russian Foreign Minister should talk of peace while these preparations for war are in active progress and while Japan's pacific proposals remain unnoticed by Russia for reasons the sufficiency of which is not appreciable. Two or three months ago the despatch of large bodies of troops from Russia to the Far East might have been capable of explanation, apart from the hypothesis of warlike intention. Russia might then have been credited with supposing that her neglect of the pledges she had given with regard to Manchuria would not be quietly endured by the nations interested, and might have consequently seen some necessity for belligerent preparations. But unless she intends to reject Japan's proposals and thus force a sanguinary issue, there is no apparent pretext for this large military movement to-day. It amounts almost to a challenge. Japan would be absolutely and entirely justified in demanding an explanation of the purpose animating all this warlike activity, and as for China, were she still possessed of any semblance of sovereignty or any disposition to exercise it, she could not sit quiet while her territories are being inundated by the armed forces of a foreign State. We have always been willing to read into Russia's acts the best explanations that circumstances permitted. But we are compelled to say that she presents herself to us now in the guise of a deliberate disturber of the world's peace. There is still just a ray of hope left that as, by her own acts in the recent past, she has shown herself quite unsolicitous to win international trust, so she has no disposition to place any trust whatever in other States, and is determined to be ready for the worst emergency though at the same time willing to avert it. She is placing Japan in a terribly hard position.

It is stated by the *Asahi's* Peking correspondent that China is disposed to class Great Britain's Tibet expedition in the same category with Russia's doings in Manchuria. The Peking Government could scarcely have been expected to exercise greater discrimination. The Russians themselves, according to a telegram published on the 5th instant, admit that the expedition forestalled an intention on their own part to declare a protectorate over Tibet and though we do not consider that as an altogether credible statement, it furnishes some information as to what outsiders think. China has for many years relied on the mutual jealousy of the Powers. She has imagined that no one of them could engage in any scheme of territorial aggression at her expense without arousing the destructive opposition of the rest. Germany commenced the demonstration of that fallacy in Shantung, and Russia has completed it in Manchuria. China's eyes should now be open to the fact that although the Powers may quarrel over her partition, the bone of contention will be the relative magnitudes of their several shares, not the preservation of anything for China.

Tuesday, December 8.

A telegram to the *Jiji Shimpō* from London speaks again of the probable resignation

of Count Lamsdorff and of his replacement by Mr. Iswolsky, formerly Russian Representative in Tokyo. The reason assigned for the Count's resignation is that he disapproves of the continued tenure of Manchuria, probably because he realizes the enormous financial strain to which such imperialism must expose his country. The Grand Duke Alexander, according to the *National Zeitung* of Berlin, thinks that the Russian Representative in Seoul should be instructed to desist from interfering between the Emperor of that country and his Ministers. All this may be mere rumour, but taken in conjunction with Viceroy Alexieff's departure for St. Petersburg, it goes to bear out the idea that Russia's counsels are divided, and that she would not prolong the present intolerable situation were she able to reconcile the conflicting views by which she is herself distracted.

Wednesday, December 9.

Naturally much interest has been caused in Tokyo by the news that Russia's answer to Japan is drafted and that it only awaits the Emperor's approval. The intelligence may be open to doubt, but there is little room for question that Russia should by this time have made up her mind, and that if her reply is not drafted, it ought to be. The *Jiji Shimpō* quotes an expression of opinion that the draft is probably not in accord with the pacific and broad-minded view of Baron Rosen, but is rather an expression of the warlike opinion entertained by Viceroy Alexieff. To this analysis is added a statement that the rumoured resignation of Count Lamsdorff and his replacement by M. Iswolsky may be regarded as an indication of an access of strength to the war party. But that estimate of M. Iswolsky's politics is scarcely consistent with the conception formed of him by those that made his acquaintance in Tokyo. The pressure of events may have induced him to abandon the view that Russia in Manchuria is overtaxing her financial strength, but can scarcely have reconciled him to the prospect of supplementing her embarrassments by a war that might easily be avoided.

Thursday, December 10.

The last news from Peking is sent by the *Jiji Shimpō's* correspondent under date of the 8th instant. He represents the French Minister in China as having advised the *Wai-ron-pu* that if the Chinese Government desire to effect an amicable arrangement with Russia and to bring about the withdrawal of the latter's troops from Manchuria, the only practicable course is to concede at least a part of the conditions proposed by M. Lessar some time ago. Should China be willing to take that route, the French Representative is said to have hinted that he would not be unwilling to undertake the functions of peace-maker.

To this suggestion the Chinese Government is related not to have given any immediate reply, being disposed not to depart one jot from the resolute attitude it has hitherto maintained towards Russia's programme, and being moreover inclined to think that the French Minister has been instigated by Russia to offer intervention. At all events nothing definite will be done without consulting Japan, and for that purpose Messrs. Tao Tai-kiun and Na Tung proceeded to the Japanese Legation on the 6th instant.

The *Jiji Shimpō's* Peking correspondent has shown himself to be generally well informed, and although the wish to believe his news in this case exercises a strong influence

on our judgment, we still venture to hope that he is correct. As to the notion that France, being Russia's friend, is thereby disqualified to act the part of intermediary, it is extravagant. Such a character is precisely one of France's strong recommendations, for it entitles her to Russia's confidence and she already possesses the confidence of the world. Then, again, with regard to the main question itself, if any such suggestion has been seriously formulated, there should not, we think, be the least hesitation in according a favourable reception to it, so long as the original principle is not sacrificed, the principle that a Power having given an unconditional promise, is not entitled to make its performance conditional. Russia's doings in East Asia have been condemned by public opinion with tolerable unanimity. There may be some defense for them, but the only palliation we ourselves have been able to discover is that she yields to the irresistible pressure of imperialism, and that she has the misfortune to be divided in her counsels so that the acts of one section of her officials belie the pledges given by another section. But whether condemnation be qualified or wholesale, it is certain that her "face" must be saved in any arrangement ultimately made, and that as much is due to her prestige as to the prestige of any other Power concerned. Whatever she asks for within tolerable limits should be accorded, for it is every one's business and duty to assist in supplying materials for the construction of the "golden bridge."

President Roosevelt's emphatic denial of all collusion between his Government and the Panama insurgents was not needed, by Englishmen at all events. Some of his own countrymen did not hesitate to express a suspicion that Washington had encouraged and abetted the revolutionists, and had thus been guilty of a most unfriendly act towards a sister republic. Indeed the *New York Times* went so far as to declare that the United States was treading "the path of scandal, disgrace and dishonour;" the *New York American* said, "we should rather forego for ever the advantage of an inter-ocean water-way than gain one by such means as that;" and the *Evening Post*—we quote from the *Literary Digest's* excerpts—asked:—"Who could have imagined that an American Administration would make the Jamieson Raid look respectable?" It is an unfortunate fact that not a few journalists in these strenuous times have adopted the habit of substituting force of language for strength of reasoning. They appear to think that if a phrase is effective, so also must its logic be. We have examples of this kind of thing in Yokohama; very poor imitations of American prototypes, but still imitations. No thoughtful and impartial person can pay the least attention to the suggestion made by the journals quoted above. What will occur to such persons, however, is that the Isthmus where immense sums of American money are about to be spent, has become a somewhat insecure territory for such an enterprise, and that, in the end of the chapter, Washington will have to assume duties there which American citizens do not care to contemplate.

Tientsin sends to the *Asahi Shimbun* a statement that the Russians in Tibet are building forts to oppose the progress of the British expedition and are moving a force westward with the same object. If this news were credible, the expansion of Russia's military horizon would be very remarkable, and fate would seem to have become

wickedly ironical in planning such episodes during the reign of the great professor of peace. But we question these facts and this westward march.

The mystery of Viceroy Alexieff's visit to St. Petersburg is not resolved. A few days ago it was confidently predicted that he would leave Port Arthur on the 2nd of December. Then came equally confident intelligence that he had actually left. And now news arrives from Seoul that he will assuredly leave on the 14th instant. Seoul will appear a very apocryphal source in our readers' eyes, but there is an explanation; namely, that the officer commanding the Russian squadron happens to be there now, and from him this intelligence is said to have emanated.

It is a little surprising to learn from a Peking correspondent that the Chinese Government has been interesting itself to discover whether French projectors are planning any railway enterprises in Fuh-kien. The result of the inquiries addressed to the local officials of that province is said to have been entirely negative. This is the first we have heard of any such business, and it need only be observed that if a French syndicate entertain any such project, there can scarcely be any political element in the matter.

CHINA.

Saturday, December 5.

No wonder that the new Taotai of Antung was reluctant to proceed to his post. The telegraph says that there are now between seven and eight thousand Russian troops at Feng-hwang-cheng, and that the great bulk of them have just arrived. In the presence of such a force the administration of any Chinese official must have the character of a mere farce.

What are these troops doing? Most of our readers know that Feng-hwang-cheng is the first walled town in Chinese territory after the Yalu is crossed. A strong force assembled there constitutes a distinct menace to the Korean frontier; that is to say, in the absence of any other ostensible reason for such a manoeuvre. We do not perceive any other reason. It is true that there has been some trouble with mounted bandits in the Antung district, but of late that trouble has taken the form of an attempt on the part of Chinese local officials to adopt vigorous measures against the bandits and an attempt on Russia's part to protect them. Whether in the capacity of a guardian or of an exterminator, however, a force such as Russia is said to have assembled at Feng-hwang-cheng seems quite disproportionate to the occasion, and the Japanese will scarcely be blameworthy if they entertain some surprise that such steps should be taken at the very moment when Russian statesmen are making pacific declarations in Europe and refraining from all reply to Japan's peace proposals.

Telegrams from Shanghai show that the trial of the *Supao* prisoners has at length been commenced before the Mixed Court, the Governor of Shanghai and Mr. Assessor Giles being present. One of the accused persons was released, on the ground that his detention in jail since the charge was first formulated had been sufficient punishment for any offense committed by him. Two others had the count against them reduced to publication of incendiary language, and the remaining two are still undergoing examination.

Monday, December 7.

A telegram from Peking says that at the

close of last month some seventeen thousand Russian soldiers passed through Mukden en route southward and that many car-loads were then arriving daily at that city. The men are said to be seizing dwellings and temples and to be behaving with much arbitrariness.

The Empress Dowager is reported to be much incensed at the weakness shown by her country in the face of the re-occupation of Mukden by Russia, and to have issued orders that steps be at once taken to organize military forces under the command of General Ma and Tieh. That really sounds almost amusing, if there could be anything comical in the tragedy of a great empire's downfall. In a very few years, if the remaining parts of China's house be left standing, she could get together a military force which would secure her completely against further invasion. But it is now a question of days not years, and to hear her Sovereign talk of repeating, at a moment of dire extremity, the abortive fiascos that have so often diverted the world, is very pitiable. Still, if China make a manly effort to assert herself, she will have the sympathy of the nations. But there is one thing to be said. Is she prepared for the possible results of such an effort? It is quite certain that, single-handed, she could not make anything like a sensible impression upon Russia's army. If she make the attempt and fail, as she certainly would fail, what will follow? Evidently the extension of the sphere of trouble into her remaining dominions. Instead of having merely to consider the loss of her three outlying provinces, she would have to face a Russian invasion of the Yellow-River district. Is it in preparation for such an eventuality that Russia is hastening forward regiment after regiment to East Asia? Does she anticipate the impossibility of China remaining quiescent under the process of dissection, and is she getting ready to take full advantage of her unhappy victim's first struggle? None but the statesmen of Russia herself can answer the question, and perhaps even they do not feel quite certain of their own intentions. At any rate it is a momentous pageant that the world is invited to witness.

It appears that the Chinese Government has really inaugurated a solid measure of military reform by organizing a kind of head-quarter staff in Peking under the chieftainship of Prince Ching with Viceroy Yuan for his second in command. This step is said to have been suggested by a memorial jointly addressed to the Throne by Viceroy Yuan and General Tieh after the latter's return from the recent autumn manoeuvres in Japan. We gather that the memorialists dwelt especially on the impossibility of concerted action on the part of the various provincial forces, impossibility due mainly to their varied equipment and partly to differences of tactical systems. It is not stated that any large increase of the forces at the immediate disposal of the central Government is contemplated in connexion with this measure. The *Asahi's* Peking correspondent does indeed speak of a project to embody an army of 100,000 men for the defence of the metropolitan districts, but this would seem to have been suggested by ex-Viceroy Chang Chih-tung independently of the Yuan-Tieh memorial. The same correspondent hints that one obstacle in the path to any effective reorganization is the Empress Dowager's distrust of purely Chinese generals, a very serious obstacle if it really exist, for many

of the men now holding distinguished positions in official and military circles are Chinese. Perhaps the outcome of the destructive menace now hanging over her head may awaken China to utilize the fine materials nature has placed at her disposal, but history can not be erased, and it is impossible to forget that although often threatened in the past with similar disaster, and although three times over-run by Occidental forces even to her very metropolis, she subsequently reverted to her old lethargy.

General Ma is reported to have proceeded to Tientsin on a secret mission from the Empress Dowager to Viceroy Yuan, the General's commission being connected with the organization of troops.

Wednesday, December 9.

A telegram to the *Fiji Shimpō* from Tientsin, dated the 7th instant, says that General Ma, after consultation with Viceroy Yuan, has proceeded to Shanghai, on business connected with the scheme of military expansion lately mapped out by Chinese officials and approved, it is said, by the Court. The telegram adds that as the result of careful consultation, the Viceroy and the General came to the conclusion that China must fight Russia. So, of course, she must if she desires to save Manchuria, or rather to essay its salvation, for it must be the conviction of all onlookers that no force available to China can now push Russia over the Amur.

The trial of the accused in this case was concluded on the 7th instant but the judgment had not been delivered at the time of the latest telegraphic advices. It has been a long and weary affair, but the foreign public can not fail to feel much satisfaction that the cause of justice was successfully championed.

Thursday, December 10.

The Chinese Representative in St. Petersburg appears to have been busily endeavouring to obtain some relaxation of the Mukden situation. In a recent report to his Government—quoted by the *Fiji's* correspondent—he is said to have stated that repeated questions had been addressed by him to the Russian Foreign Office on the subject of the re-occupation of Mukden, but in no instance had he succeeded in obtaining a satisfactory or intelligible answer. Therefore he sought to obtain audience of the Tsar for the purpose of laying the matter direct before His Majesty. But events with which the public is familiar defeated that project, and he was finally obliged to submit a memorial, urging that Mukden, being the cradle of the present Sovereigns of China, can not possibly be tamely surrendered by them to the military occupation of a foreign State, and that as a declared and recognised lover of peace, the Tsar should order the termination of a state of affairs manifestly incompatible with the attainment of his wishes. There has of course been no answer to this petition. An answer in writing was not to be expected.

As an object lesson in the way to succeed, Russia's doings are admirable. When she wants something very badly, she takes it, and when remonstrances are addressed to her she takes something more, so that, in the end, the maintenance of her original acquisition is condoned by the abandonment of her subsequent usurpation. It is as though one should begin by trespassing in a neighbour's garden, and then, in reply to his complaints, should proceed to invade his house also, the end in view being that to recover the sanctity of his domicile he will be ultimately

glad to sacrifice the inviolability of his domain. Thus Mukden and Yong Am-pho, of which nothing demanding attention had been heard prior to the 8th of October last, are now the salient points of the complication. If a settlement be not effected quickly, Mukden and Yong Am-pho will become accomplished facts, and the attention of negotiators will be diverted to some new episodes.

General Ma's projected visit to Shanghai in connexion with the work of military expansion, is reported to have been abandoned. What that means there is no suggestion. Meanwhile the ex-Viceroy Chang Chih-tung is said to have addressed a strong memorial to the Cabinet, urging the necessity of an unyielding front, but it must be confessed that the public grows a little weary over all these memorials alleged to be penned in Peking.

Friday, December 11.

There is some talk of conferences being conducted in Peking between the Russian Representative and the Chinese Government with reference to the civil government of Manchuria. Very likely that is a problem presenting some troublesome features, for the authority of the Chinese local officials must be in practical abeyance, and the public has not learned that any provision has yet been made by Russia except for military control. The reports add that pending the settlement of the radical problem, namely, the tenure or surrender of the Three Provinces by Russia, any discussion as to the manner of their civil administration is considered by Japan to be premature and ill-advised. On the other hand, something is certainly due to the unfortunate inhabitants who seem to be now without any efficient machinery for preserving order.

A very interesting message is sent by the *Asahi's* Peking correspondent. It relates to the celebrated, or notorious, Tung Fuh-hsiang, now vegetating in Kansu at the limits of the empire. A certain Fan Tseng-hsiang, who apparently holds high local office in that province though hitherto we have known him only as a Judicial Commissioner in Shensi and a member of the Reform Council of 1901, is said to have recently memorialized the Throne, advising that in the empire's present dilemma General Tung should be summoned from Sinkiang and given high command, the only way to save the situation. To this the Empress Dowager is represented as replying that not a night passed without painful reflections about Tung's undeserved fate. His banishment had been an act of injustice dictated by the Great Powers when China was helpless to resist, and it would give his Imperial mistress supreme satisfaction to recall him and, by a signal exhibition of confidence, to show in what esteem he is held. But such a proceeding would surely not be tolerated by those who had exacted Tung's punishment. It was necessary therefore to bow to the inevitable, and Her Majesty could only beg that Fan, on his return to Shensi or Kansu, would convey her warm good wishes to Tung, assure him of her sincere sympathy and tell him that if the occasion offered he would certainly be recalled to the capital and to the service of this country.

If this be true what curious reflections it suggests!

News from Peking to the *Fiji Shimpō* affirms that with respect to the recently reported intervention of the French Representative on Russia's behalf there are two

parties in the Chinese capital, one, the strong party, headed by Na Tung, the other, the weak party, led by Ku Fung-ki. It is further stated that the Vice-Minister of Foreign Affairs, Lien Fang, is in daily communication with the Wai-wu-pu, and that a belief prevails in diplomatic circles in Peking that a secret treaty is being negotiated, China having become suspicious and alarmed owing to the long delay in the negotiations between Japan and Russia.

The *Fiji* published a telegram from Vladivostok, saying simply that Viceroy Alexieff's visit to St. Petersburg has been postponed.

KOREA.

Saturday, December 5.

It is reported from Seoul that Li Yong-ik, who in addition to his post of Director of the Imperial Estates Bureau, was recently appointed Minister of Finance, has memorialized the Throne urging that the Japanese Government be approached with a view to the release of the murderer Ko. In Korea it is evidently believed that U Pon-som, Ko's victim, was among the assassins of the Queen in 1896, and a service of thanksgiving is said to have been held in consequence of the man's death, while his slayer's name is correspondingly extolled. The Min family and its partisans, that is to say, the family of the unfortunate Queen, are now in possession of strong political influence, a fact which may explain Li Yong-ik's memorial as well as the silence of those—and they must be many—who understand the uselessness of attempting to stay the wheels of justice in this matter. If U Pon-som was really implicated in that most barbarous deed which shocked the whole world seven years ago, most of us are probably human enough to entertain a secret sense of satisfaction that vengeance has at length fallen on his head, and a sense of dissatisfaction that the privilege of asylum should be capable of having been abused for the protection of such a ruffian. But justice must take its course.

Monday, December 7.

According to a telegram published by the *Nichi Nichi Shimbun* from Seoul, the Korean Foreign Office, replying to the French Representative's remonstrance about the Seoul-Wiju Railway, said that the Representative was mistaken in supposing that the construction of the railway had passed into the hands of a foreign Power. Further the Foreign Office denied the allegation that the Korean Government had given any unqualified engagement to employ French experts and French materials in the building of the line. What it had promised was that, under certain circumstances, such recourse might be had to French aid. Since, then, Korea had reserved to herself full discretionary power in this matter, it was not within the legitimate right of the French Minister to make any official representations on the subject.

Those who recall what was published at the time of the French syndicate's abandonment of the concession of the Seoul-Wiju line, will recollect that the comment made by publicists then was on the lines of Korea's alleged reply to the French Representative. In other words, it did not then appear that Korea had pledged herself definitely *vis-à-vis* France or had done more than formulate a courteous recognition of the pioneer part acted by a French syndicate. Of course in this matter

France is plainly working in Russia's interests if not at her direct instigation. Originally the syndicate which interested itself may justly have looked to gather plums by shaking the tree of international rivalries, and if Frenchmen were sharp enough to detect that opportunity, the credit and the profit should have belonged to them. But the profit proved a delusion. In fact, the whole programme was premature. Now, however, it has been galvanized into very potent reality by Russia's manner of exploiting railway possibilities, but beyond her friendship for Russia France has not, and can not have, any kind of interest in the matter. Her action is natural enough. Its true significance, however, can not be mistaken.

The latest news from Korea is to the effect that the assassination of U Pon-som has become a matter of popular agitation in Korea; that a very strong movement is on foot to secure the surrender of the murderer Ko, who is regarded as a kind of national hero, and that the Court itself, moved by this excitement, has recalled the incidents of the Queen's slaughter so that Japan's name is not now in good odour in Seoul. It has never been made clear what part, if any, Viscount Miura, then Japan's Representative in Seoul, took in the terrible affair of 1896. It has never been made clear that any part was taken in it by any Japanese official. But an uneasy conviction certainly disdursive that Miura, or some one in the Legation's staff, had previous knowledge of what was in contemplation, and, having such knowledge, failed to utilize it in a preventive sense. The most that can be justly charged is a sin of omission; a sin which Japan recognised so far as to banish Viscount Miura permanently from official life. It was predicted at that time that no Japanese throughout the *Meiji* era would be found ultimately to have inflicted greater injury on his country than Miura had done: a true prediction.

The United States Representative in Seoul is said to be making arrangements for the practical exercise of the concession granted to his nationals: the concession for constructing water works in the Korean capital.

Another short section of the line, a section of 5 miles from Suwon to Osan, has been completed, and a trial trip was successfully made over it on the 4th instant. This makes a distance of 45 miles now finished, 25 miles from Seoul southward and 20 from Fusan northward.

The resignation of Li Chi-yong, recently appointed to represent Korea at the Court of Japan, has been at length accepted.

Tuesday, December 8.

England, Japan and the United States continue to press for the opening of Yong Am-pho. A telegram to the *Jiji* says that on the occasion of the audience recently granted to the Representatives of the first two Powers, the Emperor promised that the place should be opened in two or three days, but since there are as yet no indications of the promise being carried out, both officials have addressed strong notes to the Foreign Office on the subject. The United States Representative also, who had audience on the 5th instant, is said to have pressed the same point. There ought not to be much doubt about the ultimate success of these three Ministers' united action.

Wednesday, December 9.

It was stated in Seoul on the 7th instant,

according to an *Asahi* telegram, that the Russian Representative in that city was to be received in audience by the Emperor on the 8th, that he would be accompanied by the Russian Admiral, and that he intended to renew his protestations against the opening of Yong Am-pho. We have already given our reasons for thinking that of all the proceedings taken by Russia since Far-Eastern affairs became entangled, her opposition to the opening of Yong Am-pho is the most unwarrantable. It is flagrantly contrary to her conventions with Japan; it has no tangible basis of vested interests, and it is almost a wantonly unwise announcement of the results to be expected from Russian supremacy throughout the Three Provinces. The gradual development of Russian enterprise in the Yalu Valley and its steady consolidation are striking object lessons as to the methods of the Great Northern Power; methods which have the fine recommendation of succeeding as only success can succeed. It is difficult to avoid a suspicion that there is something pragmatical about this Yong Am-pho fuss, but a clever feature of Russia's manoeuvring is her constant readiness to convert a feint into a real attack.

The Japanese residents of Chemulpo held a meeting on the 7th instant and adopted a resolution in the sense that nothing remains except an appeal to the *ultima ratio* in the Russo-Japanese complication. As yet nothing is published about the detailed reasons that led to the passing of this resolution. Of course such declarations are not needed to strengthen the hands of the Japanese Government. But it is stated in the best informed circles that the Japanese Government is resolutely determined to adhere to the policy followed during the past three months, and that no popular agitation will push it from the path which it is now following towards, as it firmly believes, the safeguarding of the empire's best interests. Whether that path will ultimately lead to peace or whether its end will be war depends on Russia, who doubtless understands, or certainly ought to understand, what the mood of the Japanese nation is.

Thursday, December 10.

According to news received in Tokyo, M. Pavlov obtained the despatch of two Russian battle-ships to Chemulpo, where two cruisers were already lying. The Minister then invited the Admiral to accompany him at an audience with the Emperor, when, it is presumed, Russia's remonstrances against the opening of Yong Am-pho were repeated emphatically and under the shadow of an unequivocal naval demonstration.

Russia is certainly playing her cards for all they are worth.

Friday, December 11.

It appears doubtful whether the projected audience in Seoul on the 8th instant took place, the Emperor being in a position to plead illness. We refer to the audience which was to have been given to Mr. Pavlov and the Russian Admiral. The *Nichi Nichi Shinbun* undertakes to inform the public of the intentions entertained by the Russian Representative had the audience been granted as contemplated. His Excellency proposed—we quote our contemporary's correspondence—to inform the Emperor about the course of the Russo-Japanese negotiations, and to explain that whereas Russia would not shrink from an appeal to the sword, Japan had evidently no such determination, as was evinced by her desire to see Yong

Am-pho opened. Further, M. Pavlov was to tell the Sovereign that there could be no idea of Russia evacuating Manchuria.

It really appears to us that the imagination of a special correspondent is too fertile and the credulity of his audience too much strained when he undertakes to recount the thoughts entertained by a foreign diplomat and the words he proposed to utter had a certain incident occurred. M. Pavlov is a very busy official; much too busy for the tranquillity of the Far East. But the public must decline to judge him by projects that another person attributes to him and by statements he never actually uttered.

So soon as a moment's respite is afforded on the side of the Yalu, we begin to hear from the Tumen. Several thousands of Russian soldiers are now reported to have crossed the latter river. Either rumour or Russia is magnificently industrious. The Far-Eastern audience is kept on the *qui-vive* all the time.

The Korean Government is said to have debated the question of approaching Japan to secure the pardon of U Pon-som's assassin and his extradition. No definite step in that sense has yet been taken, however.

We observe with some surprise that the *Korea Review* is disposed to regard the murder of U as a political crime, and further to assume that asylum was given to the man in Japan in the character of the Queen's assassin, or one of her assassins. There can be no manner of doubt, we think, that had the Korean Government submitted to the Japanese judicial authorities at any time sufficient evidence to constitute a *prima facie* case of murder against U Pon-som, he would have been speedily handed over to justice. As to our contemporary's recommendation that the Japanese Government should oblige all political fugitives from Korea to move on, so as to clear herself from the suspicions—a "probably unjust suspicion" is the *Korea Review's* gracious way of putting it—that she harbours them for some ulterior purpose, we are inclined to think that the words were penned without much reflection. The whole question of asylum is here involved, and there will be plenty of time for Japan to re-model her practice when Occidental nations show any disposition to alter theirs.

A CHINESE OPINION.

Censor Wang is said to have addressed to the Chinese Throne a memorial denouncing the policy of settling questions by the intervention of neutrals. That has long been China's policy, he says. She adopted it on the occasion of the war with Japan, and for a moment she imagined that the benevolent intervention of Russia, Germany and France had secured for her the recovery of Liaotung from victorious Japan. But in truth that intervention has been the source of all her troubles. It proved the immediate prelude of the seizure of Kiaochow by Germany, the leasing of Port Arthur and Talien by Russia, the leasing of Wei-hai-wei by England, and finally the invasion of Manchuria by Russia with all the troubles and complications that have followed in the train of the latter event. These experiences plainly show, according to Mr. Wang, that China has been following a wrong course, and she ought now to adopt the policy of an independent empire, the policy of thinking and acting for herself.

This idea must have presented itself long ago to many Chinese publicists. It has often presented itself to foreign onlookers.

For example, we ourselves have pointed out more than once that the basis of China's policy of reliance has been ruthlessly struck away by events. Nearly fifty years have passed since a sagacious censor memorialized the Throne in the sense that safety for the Middle Kingdom lay in playing off one Occidental Power against another, since their mutual jealousies were the most effectual check upon their several aggrandisements. That was surely, a profoundly thoughtful view in the era when it was penned. But it is obsolete to-day. What is now perfectly plain is that no Occidental Power will raise an effectual finger to save from foreign aggression any Chinese territory lying outside its own sphere of influence. It is unnecessary to go into details. They will occur to any one familiar with events. China may be compared to a lay figure divided into sections by lines that mark out the areas within which each of the great Powers is to confine its aggressive enterprises. In certain respects the sections overlap, and it is expected that the overlapping shall receive practical and permanent recognition under all circumstances. But there is grave reason to doubt whether any State would take up arms to maintain the overlapping, and most assuredly no State will take up arms to preserve for China a section outlined as another State's sphere. In short, unless China can bear up her own end, she is doomed to fall. But it remains for her to consider how far her prospects of integrity would be heightened by attempting to hold more than she can grasp. She has allowed Russia to gain in Manchuria such a footing that any direct attempt to oust the invader would probably lead to an extension of his aggression. China has to think whether in trying to save a lost situation she might not furnish a fresh opportunity.

PURCHASE OF THE CHILIAN WAR-SHIPS.

Tuesday, December 8.

The *Fiji Shimpō* has a strong article about the purchase of the two Chilean war-ships by Great Britain. Our contemporary says that England herself can not have any need of the vessels. Her programme of naval construction is accurately determined and no reason exists for going outside it. The vessels were offered to Japan, but even she hesitated to purchase them as such a measure would have been a marked departure from her fixed plan of increment. England, then, in effecting this purchase, has plainly been influenced by a desire to prevent the ships from falling into the hands of Russia, who was understood to be bidding for them. It is true that an addition of one or two war-vessels to Russia's effective force would not materially alter the situation, and certainly would not diminish Japan's confidence in her ability to enter the lists. But popular opinion would have taken unpleasant note of the incident, and so Great Britain has stepped in, showing by this signal coup what her estimate is of the duties of an ally. The *Fiji* says that there can not now be the least doubt that if Japan has to fight she will have only one Power to face. No other will venture to step into the arena after England has given this unequivocal indication of her purpose.

The *Nichi Nichi Shimbun* makes a significant but brief allusion to the incident. It commends it to the notice of the Progressists' leader and his fellow-thinkers, who have of late been casting doubts on the value of the Anglo-Japanese alliance.

It is undeniable that several circumstances

go to bear out the *Fiji Shimpō's* theory about the purchase of these vessels by England. Some months ago they were offered to Japan by a great English firm, working, it is said, through the Japanese Legation in London. The ships were not then finished. They are not now finished. The estimate is that some four months would be required to make them ready for sea, but certain authorities allege that the work could be done in six weeks. At all events that was not the cause of Japan's reluctance to buy. Even had her need of the vessels been pressing, as it was not, she would have been greatly deterred by the peculiar character of their armament; a splendid armament, according to all accounts, but of a specialized type which would render the ships heterogeneous in any European or Japanese squadron. The noteworthy point is that the vessels were at that time offered at a price considerably less than that now paid for them by Great Britain. Japan did not respond, however, and subsequently she is said to have been approached by a Yokohama firm—not a British firm. But she remained obdurate. Thereafter Russia entered the field, and the price went up to the very figure—curiously enough—at which England is now alleged to have bought the ships. It certainly does look as though England stepped into the market in consequence of Russia having made her appearance there, and as if she closed the bargain at once without any haggling. As for the two vessels, they are pronounced by experts to be splendid ships, and as they have been bought without their armaments, we presume that there will be no insuperable difficulty in correcting their only objectionable feature, want of homogeneity.

Thursday, December 10.

The *Asahi Shimbun* writes strongly about the purchase of the Chilean ships by England, which it unites with the *Fiji Shimpō* and the *Nichi Nichi Shimbun* in regarding as a proof of the benevolent interpretation Great Britain will attach to her treaty of alliance in the event of Japan being drawn into war with Russia. Our contemporary further construes the act as an unspoken intimation to Japan that she will have England's countenance in not abating any of the proposals formulated for Russia's consideration. We venture to think that there is some disposition in Japan to over-rate the significance of this purchase. It must not be forgotten that the two war-vessels have been built in English dockyards, that they are still in process of construction, and that it becomes a very nice question of international morality whether their acquisition by Russia with a view to the probable, or at any rate immediately possible, contingency of employing them against another State in war, could be legitimately permitted by England. The final test in such cases must be the question, "would this transaction have taken place independently of the pending complication?" and unless the answer were unequivocally affirmative, the transaction would be tainted. But of course such considerations could not impose upon England any obligation to buy the ships. It would have sufficed for her to veto their departure from her ports for belligerent purposes. Without elaborating the situation it will be plain enough that many reflections may have presented themselves apart from pure good-will to Japan. Hence we are disposed to query the prudence of drawing such strong inferences as the *Asahi* draws. But as to the quality of England's neutrality in the event of war, there can not be much

doubt. It would be thoroughly benevolent, and Russia knows it.

THE DIET.

The two Houses met on the 5th instant for purposes of organization. In the Upper House the business consisted of the assumption of his duties by the new President, Prince Tokugawa Iyesato, and the election of chairmen and managers for the sections.

In the Lower House the Vice-President, Mr. Sugita, reported that, in the discharge of his functions, he had conveyed in the name of the House its condolences with the family of the late President Kataoka Kenkichi, on the occasion of the latter's lamented death. The message of condolence expressed the House's earnest recognition of the able manner in which Mr. Kataoka had discharged his duties throughout the long term of his presidency. Mr. Tsushima, senior member of the House, echoed this sentiment.

The House then proceeded to elect three names for presentation to the Throne in order that his Majesty should nominate a new President. In the first ballot Mr. Kono Hironaka obtained 350 votes, Dr. Hatoyama 111 and Mr. Inukai 101. A second ballot was taken with regard to the two latter. It resulted in 203 votes for Dr. Hatoyama and 157 for Mr. Inukai. The names of these three members were accordingly submitted to the Throne, and in the afternoon of the same day the Emperor nominated Mr. Kono.

On the 10th instant His Majesty opened the Diet in person at 10.30 a.m. The usual procedure was observed, and the Speech from the Throne was as follows:—

We hereby declare the Imperial Diet opened, and announce to the members of the House of Peers and the House of Representatives—

That, to Our sincere satisfaction, the relations between Our Empire and Foreign States grow constantly more friendly;

That, in order to preserve the peace of the Far East and the rights of Our Empire, We have instructed Our Ministers to proceed circumspectly with important international negotiations;

That We have ordered Our Ministers of State to prepare a programme of finance, and to submit to the Diet the Budgets and projects of law for the thirty-seventh year of *Meiji*, and that We trust you will harmoniously discharge your legislative duties in connexion therewith.

After the conclusion of the opening ceremony the House of Representatives assembled to discuss a reply to the above Speech. The following draft was agreed upon:—

Your Majesty's servants venture to express their sentiments of profound gratitude in that Your Majesty has attended in person to perform the ceremony of opening the Imperial Diet and has addressed to Your Servants a gracious speech.

The present is a time when the fortunes of the country have reached a unique and unprecedented stage, yet the measures taken by the Ministers of State are not in keeping with the situation, since at home they pursue a policy of opportunism, and abroad they forfeit opportunities. We, your Servants, can not but regard these things with profound solicitude, and we earnestly pray that Your Majesty will bring Your Majesty's enlightened judgment to bear on the situation.

Your Majesty's servants, upon whom devolve the duties of deliberation, pledge themselves to exercise the utmost circumspection and sincerity, so as not all respect to observe Your Majesty's injunctions, and to justify the trust reposed in them by the people.

The House endorsed the above remarkable reply without a dissentient voice, although it virtually amounts to an impeachment of the Cabinet. Our readers, who are familiar with the procedure usually followed by the Japanese Diet, will observe that in this case there has been a marked departure from precedent. For, instead of entrusting to the President the duty of preparing the reply

to the Throne, which reply the House endorses subsequently to its presentation, the above draft was submitted for debate prior to being laid before His Majesty. There is some reason to suppose that the members were taken by surprise and that only a very few who were in the secret understood fully what was going forward when, instead of separating as is usual after the Emperor's departure, Mr. Kono Hiro-naka, the new President, invited them to listen to the proposed reply. Be that as it may the die is cast. Dissolution is inevitable, and we expect to learn that the sentence went out immediately on the House assembling Friday.

"THE APOSTLES."

All the musical people of Great Britain and the adjacent Isles of the sea are talking of the new Oratorio, "The Apostles," produced by Dr. Elgar in October at the forty-fifth Birmingham Festival. From all accounts the work has made a tremendous sensation and the criticism evoked has varied from the most laudatory to the most condemnatory. *The Spectator*, writing a fortnight after the event, said:—

It was fitting that another name should be added to the lengthy list of British composers who have essayed oratorio. Crotch, Onseley, Sterndale-Bennett, Henry Smart, Macfarren, Parry, Stanford, Mackenzie, and others have each tried their hands with varying success in this great field of art; but it is certain that, whether *The Apostles* of Dr. Elgar will live or die, no modern production was ever looked forward to with such immense enthusiasm as was the case on Wednesday morning, October 1st, when the new work was submitted to us large, influential, and critical an audience as perhaps was ever got together. "The listening crowd admired the lofty sound" indeed. A more attentive, earnest body of music-lovers never gave a great work a worthier hearing.

Continuing, our contemporary acknowledges that it "is extremely difficult to judge of a work of such magnitude on a single hearing and a short study of the vocal score; but it is quite evident that Dr. Elgar has approached his task with the utmost knowledge of, and reverence for, his subject."

He has given us quite a new insight into the hitherto somewhat neglected characters (in oratorio, at least) of St. Mary Magdalene and Judas Iscariot, taking evidently, in the case of the latter, the charitable view of his character as expressed by Archbishop Whately. Dr. Elgar has thrown himself into the Eastern spirit of his theme with all earnestness, using frequently the Phrygian mode and ancient Hebrew melodies with dramatic effect. Exception has been taken in certain criticisms to the orchestral jingling when Judas threw down the thirty pieces of silver at the feet of the High Priest; but the whole scene is so touching, Judas' remorse so real, that the harmless jingle rather adds to than detracts from the picture; and we have other examples from great hands and minds. Whoever objected to the description, musically, of the "massy ruin" thrown at Acis by Polyphemus, or when the stone is at last removed in the grave-digging scene in *Fidelio*? There is much, very much, that is absolutely beautiful in this oratorio; the whole of the angel music, female voices mostly unaccompanied, is quite delightful. The effect of the work as a whole is so novel as to be quite bewildering. We hear the composer has never had a lesson in harmony or counterpoint in his life. We can quite believe it. He certainly is perfectly original; not a phrase that ever reminds you of any one else. He seems to begin where Wagner left off. He is not content with the ordinary orchestra. Even the strings are so *vivisti* as at times to be playing fifteen different parts. As for his percussion instruments, one can only say, "Their name is legion." In addition to three tympani, cymbals, tambourine, triangle, grosse caisse, he has two glockenspiels, two gongs, and a side-drum; and last, not least, was the "shophar," as represented by the silver soprano trumpet (introduced from the B Minor Mass of Bach). One comes away at the end of the work with a feeling that one has heard the well-thought-out music of an earnest and conscientious worker, with plenty of individuality, great dramatic instincts, and a true reverence for the holy subject he has treated. But one longs for more

true melody. One has plenty in snatches, and when one thinks one is in smooth water, crash comes some unexpected unresolvable discord which seems to spoil it. Taken as a whole, to lovers of real music the work is very disappointing. It is dramatic scene-painting from beginning to end, and *not* oratoric music in any sense of the word.

The musical critic of the *Academy and Literature* opens his review with a query. He writes,

Is "The Apostles" a really great work? Is it greater than "The Dream of Gerontius"? Will it live? These and like questions will be discussed for some considerable time wherever musicians are gathered together—though he would probably be rather ill-advised who attempted off-hand a final answer to any one of them. One and all at least are agreed as to the monumental character of the work on its purely technical side. The most intricate pages of "Gerontius" are child's play compared with some of those which figure in "The Apostles," while in his disregard of academic canons Dr. Elgar has likewise in his new work gone far beyond anything by which he shocked the purists in the case of the older work. Such things as that passage of consecutive fifths and fourths in the second part of the work, or the astonishing "Silver pieces" motive, happily enough described as "a study in false notes," are truly calculated to excite the anguish of the pedants, and even the least pedantic may well be forgiven if they are inclined to question whether better results could not possibly have been attained by less extraordinary means. But after all no great work ever stood or fell on the strength of mere details of this order, and "The Apostles," like every other such work, must be judged from a less restricted standpoint. None the less it is, perhaps, the least satisfactory feature of "The Apostles" that its music deals so largely in these novel and extraordinary characteristics.

Again we find another critic saying:—

Dr. Elgar's theme in "The Apostles" is often enough of the simplest and most elemental order—meet subject, one might have thought, to be handled in the severest manner and with the least sophisticated means. Wherefore one finds one's self questioning too frequently the aptness of these tortured harmonies and far-fetched modulations, these odd melodic twists and turns and bizarre orchestral devices, wherewith Dr. Elgar's score is so thickly sown. The thing is astonishing enough; but ought that to be the predominant sentiment excited during the hearing of such a work? Is there not something lacking in these pages of that calm breadth, serenity, and strength which one might fitly look to find. But Dr. Elgar has addressed himself to his task in a manner all his own, and at least it is to be congratulated on the production of a work displaying such immense mastery of all the resources of his art, even if one cannot regard it as all that some of its admirers find it.

While on this subject some details regarding Dr. Elgar's career may not be uninteresting. It seems that although he is one of the most learned of contemporary musicians, he has hardly had a lesson in counterpoint or harmony in his life, having acquired all his knowledge for himself from text-books and his own independent studies. He has never had a lesson in orchestration either. Yet he is accounted by general admission one of the most wonderful instrumental colourists of his time. In his earlier days Dr. Elgar, who comes of a musical stock, was for a time bandmaster at the Worcestershire County Lunatic Asylum, in which capacity his business was to conduct the performances of the attendants' orchestra once a week and to write quadrilles, polkas, &c., for them, in respect of which he received from the Board the regulation payment of 5s. per set; likewise "arrangements" of Christy Minstrel songs at the lavish remuneration of 1s. 6d. per ditty. But the composer of "The Apostles" is far from despising these early experiences. On the contrary, he says that they taught him much. Like more than one other famous musician, both of the past and the present, Dr. Elgar has a pretty wit, which takes shape in various forms—amusing repartees, vivacious letters embellished with the most spirited illustrations, and musical *jeux d'esprit* of all descriptions. He is also

an omnivorous reader, possessing many much-prized first editions in his extensive library, while pictures of every school and also old furniture, of which he has many interesting specimens, are among his other "interests." In short, Dr. Elgar is one of the most many-sided of living musicians.

MR. CHAMBERLAIN'S CAMPAIGN.

The following summary of the speech delivered by Mr. Chamberlain at Newcastle we take from *Public Opinion*:—

When Lord Spencer descended from his high position to speak of him as the most unscrupulous of men, when Sir Henry Campbell-Bannerman said he had descended to the worst depths of political profligacy, he (Mr. Chamberlain) left these gentlemen and all their followers to wrap themselves up in their own virtue and wisdom, and he hoped that these would warn them. He would turn to Lord Goschen, Mr. Asquith, and Lord Rosebery. This question he had raised not as a party, but as a national and a Colonial question. Our whole prosperity was dependent on our maintaining and even increasing our Colonial trade. We could only keep our Colonial trade by the method he proposed, which was really the offer of our Colonies. The vast majority of the colonists were prepared to give more than they would receive. In the plan he laid before them there was no sacrifice on the part of the people. He was simply asking the people to transfer the tax from one article to another, from one pocket to another. The expenditure of the working-man would not be increased by a farthing. He denied that free imports had contributed to our prosperity. We had not done well because of Free Trade—he was not there that night because of the gout. If a man could not see the difference between the state of things to-day and thirty years ago, he ought to call himself, not a Liberal, but a Troglodyte, and live in a cave. His (Mr. Chamberlain's) opponents' figures were largely irrelevant; he might grant them all and still not alter one word of his programme. What the workman had to fear was, not a duty on corn, but a shortage of the supply. There was only one remedy for this, and that was to increase our sources of supply. We must call in the New World—the Colonies—to redress the balance of the old. Of all the taxes he proposed not more than one-half would be borne by the consumer. And he would make a profit out of the arrangement of from 2d. to 3d. a week. Commercial union was the first step towards a great, loyal, united, federated Empire. Preferential tariffs were necessary in order to keep the Empire together. Lord Rosebery at Sheffield said he did not find one jot or tittle of proof for that "amazing assertion." But it was Lord Rosebery's own assertion, made at Leeds in 1888. His (Mr. Chamberlain's) programme was to go with a stiff back to our competitors and say, "Gentlemen, we think you have played this game long enough." Then he would go to our kinsmen in the Colonies and say, "Gentlemen, we think it is high time that John Bull and Sons entered into partnership."

The other side of the question we quote from the same journal's digest of Mr. John Morley's speech at Manchester:—

There was a great scene in a famous old English comedy, in which a rake and a spendthrift put up for sale the family portraits, and people were asked now in this new campaign to put up Cobden, Bright, Peel, and Gladstone—put them all up to a very cheap auction. Every single living man who had carried the seals and worn the gown of the Chancellor of the Exchequer—Sir William Harcourt, Lord Goschen, Sir Michael Hicks Beach, and, not least, the courageous Mr. Ritchie—every one of them experienced and authoritative men, took the same view as our ancestors took. Nothing would persuade him that Lancashire was going to be in a hurry to change the name of the Free Trade Hall to Protection Hall, or the New Corn Law Hall. Some of them had been called friends of every country but their own. Now their teachers, pastors, and masters told them that all countries were wise except our own. He did not believe it. He was not a Little Englander; he was an Old Englander, and old England knew very well what she was about. They were told we might have two elections. He did not think so; he thought one would be quite enough for these gentlemen. The proposal was a farce. Suppose through any large indignation raised against this retaliation policy the United States put a halfpenny a pound upon our cotton, where was Lancashire? He appealed to them not to go into this matter without counting the risks. The time had come, or was very rapidly coming, and the sooner the better,

when we should see this false image, with its feet of clay, shattered into pieces.

Meanwhile the lighter side of the great fiscal issue is amusingly dealt with by Mr. Mostyn Pigott in a small brochure entitled "The Joseph Jingle Book." Mr. Pigott is modest withal, and admits in his opening lines that to attempt to inform any one as to what preferential tariffs may mean "would scarify the little sense" he's got. Not presuming to understand the question, he gives Mr. Chamberlain credit for sincerity.

Though the nut you've attacked,
Prove too hard to be cracked,
And you suffer defeat in the fight,
Consolation remains,
For your trouble and pains—
In our hearts and our brains
We'll believe you believed you were right!

Mr. Pigott takes Mr. Chamberlain through various phases, and makes excellent sport of some of the things his critics have said of him. Thus, according to C.-B., Mr. Chamberlain is like a noisy bee bustling from flower to flower and gathering vitriol. Says Mr. Pigott:—

How doth the bad but busy Bee
Employ each shining hour
In bustling rather noisily
About from flow'r to flow'r?
How airily he wings his flight,
How cheerily he flits,
And makes beholders in their spite
Completely lose their wits!
I never guessed the Bee had aimed
At such a spiteful act
Till Campbell-Bannerman proclaimed
The scientific fact.

Mr. Chamberlain becomes the Imperial bogey man. He disturbs the equanimity of Germany, he sails for South Africa, he offends the millionaire,

J. B.

Robinson he!

and finally he upsets thing generally, this restless Joseph Brum de Brum. Mr. Pigott thinks—

A quiet summer afternoon
Is worth a dozen Zollvereins.
Joseph, Joseph Brum de Brum,
If time be heavy on your hands,
Are there no empty Corps
Or any foes in foreign lands?
Oh, teach dear Mr. Gerald trade,
Teach Brodick things he ought to know,
Deal gently with the Cobden Club,
And let this wearing subject go!

Mr. Pigott, being a poet, must needs be a seer, and indulges in a very mild prophecy:

All the time it grows apparent fast and faster
That, whatever are the wrongs or what the rights,
You are more or less the situation's master,
Which is far from pleasant news for Cobdenites.

DEATH OF MR. HERBERT SPENCER.

By the death of Mr. Herbert Spencer at the ripe age of 83, Great Britain loses one of her foremost sons. As a philosopher, logician and man of letters he made a profound impression upon the intellectual development of the nineteenth century, expanding its mental horizon, snapping many a galling chain welded by ignorance, prejudice and bigotry, and giving an impetus to freedom of thought and enquiry which is the lot of few mortals to achieve. Pressure on our space to-day compels us to limit our obituary notice of the great thinker to the well-digested biography which appears in *Men and Women of the Times*:—

Mr. Herbert, Spencer was born at Derby, on April 27, 1820. He was educated by his father, a schoolmaster and private teacher in Derby, and his uncle, the Rev. Thomas Spencer, a clergyman of the Established Church, who was active in various philanthropic movements. At the age of seventeen became a civil engineer, but after about eight years abandoned the profession, having during that period

contributed various papers to the *Civil Engineers' and Architects' Journal*. His first productions in general literature were a series of letters on "The Proper Sphere of Government," published in the *Nonconformist* in 1842, which were reprinted in pamphlet form. From 1848 to 1853 he was engaged as sub-editor of the *Economist*, and during that time published his first considerable work, "Social Statics; or, the Conditions essential to Human Happiness specified, and the first of them developed," 1851. Various articles, chiefly for the *Westminster* and other quarterly reviews, were written during the next four years. In 1855 appeared his "Principles of Psychology," which interpreted the phenomena of mind on the general principle of evolution (this was four years before the "Origin of Species" appeared). A break-down in health followed, which prevented work for eighteen months: 1857, 1858, and 1859 were occupied in writing various essays for the quarterly reviews, &c. In 1860 Mr. Spencer issued the programme of his "System of Synthetic Philosophy," which proposed to carry out in its application to all orders of phenomena the general law of evolution set forth in two essays published in 1857. To the execution of this project his subsequent life has been mainly devoted. The works composing the System are now all published. They are: "First Principles," 1862 (10th edit., 1897); "The Principles of Biology," 2 vols., 1864 (5th edit., 1894); "The Principles of Psychology," 2 vols., 1872 (5th edit., 1890); "The Principles of Sociology," vol. i., 1876 (4th edit., 1893); vol. ii., 1890 (3rd edit., 1893), comprising "Ceremonial Institutions," first issued 1879, and "Political Institutions," 1882; vol. iii., 1896 (2nd edit., 1897), including "Ecclesiastical Institutions," first issued 1885; "Principles of Ethics," vol. i., 1892 (2nd edit., 1898), including "The Data of Ethics," first issued 1872; vol. ii., 1893, including "Justice," 1891. Mr. Spencer's other works are: "Education: Intellectual, Moral, and Physical," 1861 (38th edit., 1898); "Essays: Scientific, Political, and Speculative," 2 vols., 1858—63 (5th edit., 3 vols., 1891); "The Classification of the Sciences; to which are added, Reasons for Dissenting from the Philosophy of M. Comte," 1864 (3rd edit., 1873); "The Study of Sociology," 1873 (21st edit., 1894); "The Man versus the State," 1884 (14th thousand, 1897); "Various Fragments," 1897. Beyond his own proper work Mr. Spencer has published eight parts of the "Descriptive Sociology," classified and arranged by himself, and compiled by Professor Duncan, Dr. Scheppegg, and Mr. Collier. This work was originally undertaken simply for the purpose of providing himself with materials for the "Principles of Sociology," but was eventually published for the use of others. Part VIII., published in 1881, contained the announcement that having during the preceding 14 years sunk between £3000 and £4000 in the undertaking, he could no longer continue it. Mr. Spencer paid a visit to the United States in 1882. On May 12, 1883, he was elected a correspondent of the French Academy of Moral and Political Sciences for the section of Philosophy, in the room of Emerson, but he declined that in common with all academic honours, and other distinctions. Mr. Spencer's works have been extensively translated. All are rendered into French, nearly all into German and Russian, many into Italian and Spanish; and the work on Education has appeared also in Hungarian, Bohemian, Polish, Dutch, Danish, Swedish, Greek, Japanese, and Chinese. Since 1886 Mr. Spencer has been an invalid. From that date up to 1891 he published nothing; but he has since completed the "Synthetic Philosophy," besides an abridged and revised edition of "Social Statics," 1892, and a revised and enlarged edition of his "Essay" in three volumes, 1891.

NOTES OF CURRENT EVENTS.

Mr. William E. Curtis, the special correspondent of the New York *Commercial Advertiser* and the Chicago *Record-Herald*, in one of his recent letters, gives a detailed account of Dr. Barnardo's work among the children of the London slums. During the thirty-six years of his activity, ending July 31, 1903, comfortable homes and honest employment have been found for 50,781 children picked out of the slums and gutters. A careful watch is kept upon each child who comes into the care of the organization, and the record shows that less than three per cent. of the rescued children have gone to the bad. It is estimated that about ten per cent. have been failures—that is, they have lacked the energy, industry, and intelligence necessary to make headway against the obstacles that human experience must encounter.

From thirty to forty per cent. never pass beyond the lot of a labourer or a servant, but this class is to be commended for its honesty, industry, and fidelity to its responsibilities. About forty per cent. are entirely successful and become valuable citizens, most of them farmers and mechanics, who accumulate money, marry well, provide themselves with homes, and raise useful families. From five to ten per cent. enter the professions. They become clergymen, lawyers, doctors, teachers, engineers, and upon the list may be found the names of several eminent men and women who have married in high stations and exercise great influence upon society. During the year 1902, 16,052 waif children were dealt with; 10,578 of these applied for admission to the home, 2,293 were rescued from utter destitution, 1,208 were rescued from circumstances of grave moral danger, 9,785 were wholly maintained, clothed, fed, and educated during the year, and of these 3,501 were absolutely fresh material, children who had never known homes or proper food or proper treatment, and had never received the benefits of charity in any way. This work is more than double that of all the other similar societies in England combined. In addition to this rescue work 11,268 children were fed during the year with 141,990 free meals, and 42,996 were furnished free lodgings; 48,086 garments were given away or sold at nominal prices, 1,493 children were fed, clothed, and educated at free day schools; 1,406 were found permanent homes or situations, and 1,053 were sent to the British colonies, principally to Canada, to grow up with the country.

Public Opinion notes that Mr. Secretary Moody's announcement of his intention to ask for about \$103,000,000 for the United States Navy has provoked some discussion regarding the expansion of America's expenditures in this direction. It is plainly evident from the tone of the following comment, taken from the *Baltimore Sun*, that this paper, and there are others of the same opinion, thinks that the nation is spending too much money on the Navy:—"If Secretary Moody's estimates for necessary naval expenditure in the fiscal year 1904-05 are approved by Congress the country will be in a fair way to have that 'big club' which some of our statesmen consider indispensable to its security. The appropriation which the Secretary of the Navy recommends is a sum nearly three and one-half times larger than our total naval expenditure ten years ago. It is true that Mr. Moody's estimates include payments on vessels authorized by the last Congress. To this extent the proposed expenditure will be in part settlement of debts incurred in the past. But it is also understood that the Secretary of the Navy will recommend to Congress the construction of additional battleships and cruisers, thus creating a debt to be paid not out of his estimates for the next fiscal year, but in a subsequent appropriation. Since 1897 the naval expenditure of the United States has been increasing by leaps and bounds. In that year it was about \$35,000,000. In 1900 it was \$56,000,000; in 1902, \$68,000,000; for the fiscal year 1903-4 it is \$80,000,000, and for the next fiscal year, if Congress approves Mr. Moody's estimates, it will exceed the \$100,000,000 mark. Is there anything in our relations with European Powers or in our aspirations as a 'world power' that necessitates this enormous naval expansion? Or are we building a mighty navy merely to show the world 'that we've

got the ships, we've got the men, and got the money, too," to cut as big a figure as any of our rivals?" It would be a mistake to conclude that the majority of American opinion is against liberal naval expenditure, for a large number of papers agree with the statement of the *Philadelphia Press* that—"A reasonably strong and thoroughly efficient Navy is indispensable for the United States."

From the *Official Gazette* we learn that from the reserves there have been taken the following sums:—

Expenses in connexion with foreign affairs.	Yen. 60,000
Special necessities for men-of-war	483,092
Expenses connected with Lumber Question.	9,000
Cost of provisions for troops	701,762
Cost of fodder for horses	581,380

These last two items are referred to a rise in the price of commodities.

Legal proceedings have been instituted by the Nippon Yusen Kaisha against the master of the Russian steamer which sank the *Tokai Maru* in a collision off Hakodate. The damages are laid at 148,000 yen. The Russian steamer has been distrained pending the result of the trial, the Japanese Company lodging security to the extent of 50,000 yen.

The telegraph announces the death of Sir Frederick Bramwell, one of Great Britain's foremost scientists.

Sir Frederick was born in 1818 and, we quote from *Men and Women of the Time*, from his earliest boyhood he showed great interest in mechanics, as evinced by his endeavours to repeat, in a rough model, the steam engines and winding machinery which he had seen at the age of nine in the construction of the St. Katharine's Dock. In 1834 he was apprenticed to one of the old school of mechanical engineers, John Hague, with whom he served his time and with whom he continued for a few years as principal draughtsman; then, after a varied experience in the employment of others, in 1853 he began business on his own account as a civil engineer. In 1856, he was elected an Associate of the Institution of Civil Engineers; in 1862 was transferred to full membership of that body; in 1867 was elected a Member of its Council, and in 1884-85 had the honour of filling the position of President, having previously been, in the years 1874-75, President of the Institution of Mechanical Engineers. In 1881, on the formation of the Ordnance Committee, he was appointed one of the two lay members of that Committee. He also, in the exercise of his profession and at the instance of the Government, served on several committees which have been appointed for various purposes. Having been for some years a member of the British Association, he was in 1872 made President of Section G. (Mechanical Section), and was selected to refill this office on the occasion of a visit of the Association to Montreal in 1884, and was elected President of that body for the year commencing with the Bath meeting, September 1888. In 1873 he was elected a Fellow of the Royal Society, and in the year 1878 served on its Council. Having been a member of the Board of Managers of the Royal Institution for some time, he was, on the retirement of Sir William Bowman in 1885, appointed to the position of Hon. Secretary of that body. In 1884 he was nominated by H.R.H. the Prince of Wales to the position of Chairman of the Executive Council of the Inventions Exhibition which was held in the following year. On the formation of the City and Guilds of London Institute for the Advancement of Technical Education, he was appointed by the Goldsmiths' Company as one of their representatives, being at that time Prime Warden of the Company, and was elected by the Executive Committee of the Institute to be their Chairman. In 1885 he became Hon. Secretary of the Royal Institution of Great Britain. In 1887 he received the honour of knighthood in connection with his services in the promotion of technical education, and in 1886 the honorary degree of D.C.L. from Oxford. In 1889 he was created a Baronet, and in 1891 was made an honorary LL.D. of Cambridge.

Our readers are aware, doubtless, that according to the law of Japan a sum of 6½ million yen is set aside yearly for purposes of maintenance, and that the ship-building undertaken with the fund thus formed is spread over periods of 5 years each. Tokyo journals state that the work of the first

period is now about to commence. Apparently there are two divisions of ships that fall under the category of wanting "maintenance." The first division comprises the *Fuso*, the *Tsukuba*, the *Kongō*, the *Hiyei*, the *Amagi*, the *Iwaki*, the *Tsukushi*, the *Chintō*, the *Chinsai*, the *Chinnan*, the *Chinhoku*, the *Chinchū*, the *Chinpan*, the *Kaimon* and the *Tenryū*. All these are old vessels of little remaining value. Those beginning with the syllable *Chin* are gunboats that were taken from the Chinese during the war. In the same division there are 8 torpedo boats, namely, Nos. 1, 13, 4, 28, 26, 27 and the *Fukuryū* and *Kotaka*. All the craft of this division are to be suffered to pass gradually out of use, no attempt being made to replace them. To the second division belong the *Katsuragi*, the *Yamato*, the *Musashi*, the *Takao*, the *Naya*, the *Atago*, the *Chōkai*, the *Yayeyama*, and the *Toyohashi*. To compensate for the wear and tear of this division, there are now to be built 4 second-class cruisers of 6,000 tons each, 4 torpedo destroyers and 32 torpedo-boats. These will take 5 years to construct—presumably in Japan—and will cost 32½ millions of yen.

Reports have reached Tokyo of the loss of the Nippon Yusen Kaisha's steamer *Teshio Maru* (1,106 tons). The ship ran on a rock in the Soya Strait on the 3rd instant at 9 a.m. during a violent gale. There was no loss of life, but the greater part of the cargo was destroyed. Every possible step was taken for the relief of the passengers.

A feature of the administrative reforms introduced by the Government is the abolition of the title "Somuchokwan" which, some years ago, took the place of "Jikwan" as the official term for "Vice-Minister." The old term is restored, and all the present Vice-Ministers become once more *Jikwan*, with the exception of Mr. Okada of the Educational Department who retires, being replaced by Mr. Koba Sadanaga.

Mr. Yanagiya ceases to be chief of the Patents Bureau, that office not appearing in the new schedule.

Prince Konoye's health seems very far from being restored. He has left the hospital, but he is said to be still suffering from inflammation of the lungs, and though not in an actually dangerous state, his condition causes much anxiety.

The following extracts from a private letter have been placed at our disposal (the writer left London on November 11th and Moscow on November 14th at 11 p.m.):—

I expect to arrive at Dalny to-morrow morning (28th Nov.). We are really due at 7 a.m. but are a couple of hours late.

Although I am very glad to be at the end of this long journey I must say it has not been very tedious, in fact I have been most comfortable. When I joined the train at Moscow I found there were two other occupants in the section. One was an American missionary going to Sendai, the other a Russian. In my opinion the trains are equally as comfortable as the Pullmans on the American Continent. They are lighted throughout by electricity, there being 2 lamps in the ceiling of each section besides a portable reading lamp over the table.

The cars are heated by hot water pipes, and are always kept at a comfortable temperature. The dining car is very nicely arranged, and contains a library and a piano. Three days after leaving Moscow the Russian left our section as did a lady who shared that of the missionary's wife. The missionary then joined his wife, leaving me the whole section to myself and I was the only occupant all the way thence to Lake Baikal. The weather was very cold, and it was necessary to wrap oneself up well before getting out of the train for exercise.

We had no difficulty in crossing Lake Baikal although there was plenty of ice. I was however, very cold. On joining the train at the other side of

the Lake I found myself again the only occupant of the section. I have thus had a compartment to myself nearly the whole of the journey from Moscow. This train is just as comfortable as that on the other side of the Lake, but lacks the piano and library.

The charges in the dining car are fairly moderate. The only unreasonable charge I experienced was two roubles for a bath, which I thought rather stiff.

I had, however, to pay a heavy duty on the Russian frontier on articles intended as wedding presents.

The public had almost hoped that nothing more would be heard of disturbances in Formosa, though it must be confessed that in view of very many decades of failure to quell the natives in pre-Japanese days, the time has scarcely come to look for complete and permanent success. News has just been officially forwarded to Tokyo that remotely in consequence of some intrigues and proximately because of the assassination of a Japanese policeman, steps were taken to effect arrests, with the result of a kind of riot which led to the shooting of some insurgents and the seizure of others. The affair seems to have had petty dimensions, and assurances are given that a recrudescence need not be apprehended, according to present appearances.

The petty officers of the Japanese Navy appear to be getting up a subscription by way of testimonial to Miss McLean, whose extraordinary kindness and hospitality to everyone serving under the flag of the Rising Sun have often been a subject of public comment. From the fact that this testimonial is to take the form of money, and from an incidental statement that the benevolent lady has impaired her fortunes by her lavish good-nature, we gather that the motive is one of charity in its ordinary sense. It is to be hoped that such is not the case, for a sequel of that kind would be disagreeable.

The public were shocked some time ago by an account of cruelties that a German tutor practised towards two boys entrusted to his care, the result being that one unhappy lad died and the other barely escaped the same fate. Here, now, is a parallel story, with the difference that the central figure is an English mother:—

Mrs. Day, the "heroine" of horrors which have been brought to light, thanks to the efforts of the National Society for the Prevention of Cruelty to Children, during the present week, is described as very dark and slight, and almost Oriental-looking. Her methods were certainly Spartan as she seemed to consider that obedience was best enforced by hanging her eldest daughter (a girl of fourteen) up to a beam in a loft by means of her skipping rope, and there letting her remain all night. On cold winter nights a salutary form of punishment was found in making her undress, and then turning her out in the garden, where she on many occasions passed the entire night. Her hands were burnt on the top of the kitchen stove, if the oven was not heated with sufficient promptitude, and pieces were on several occasions cut out of her arms by beating them with sharp instruments. To a younger sister the same treatment was meted out in modified form and both children are described as looking puny, badly nourished, and far younger than their age. Fortunately their troubles are at an end now, as the jury before whom the case was tried found the mother guilty, and Lord Coleridge yesterday sentenced her to six months' hard labour. The children are to remain under the care of the befriending Society.

We take the following from an Indian exchange:—

Simla, November 4.

As a good many wild rumours are afloat, it may be useful to state how matters in Tibet now stand. The mission is still at Kambajong where Colonel Young's husband rejoins it shortly from Simla. The Tibetans have made no sign of fulfilling their undertaking to send a properly-qualified representative to meet the British. One of the two subordinate officials from Lhasa who arrived at Kambajong some time ago proved to have no authority to discuss the questions in dispute and has now left on the grounds of sickness. There has been no open hostility on

the part of the Thibetans, but it is quite clear that the Lamas are playing their old game of procrastination in the hope that the Mission may get tired out and withdraw to India in the coming severe weather, in which case negotiations for the fulfilment of their engagements in regard to the opening of Thibet to British trade would have to be begun all over again next spring. In this they will be disappointed. The transport which is being collected in Sikkin, and the stores which are being pushed up will enable the mission to remain where it is throughout the winter, and if any attack is made upon it there is ample force in the two Pioneer regiments which are at work improving the road to India to protect it. It is possible that another Sapper Corps may be sent up to help with the road, which proves to be a heavy task to get into order, but no further troops are likely to be required at present.

There can be little doubt as to the final issue of the course England has now been compelled to adopt. Thibet is the last region of the world where the policy of exclusiveness still has active force. It is no longer a possible policy, and the fate of any country pursuing it may be regarded as sealed.

We observe that *Academy and Literature* is responsible for a statement that the late Mrs. Matilda Chaplin Ayrton, M.D., "has always been understood to be the original of Mirah in *Daniel Deronda*." This is to us a very remarkable assertion. We could scarcely have conceived two persons more dissimilar than Mrs. Ayrton and Mirah, as the latter is presented to us by the great novelist. If George Eliot really intended the *Deronda* Jewess for a reproduction of the scientific lady whom many of us had the pleasure of knowing 25 years ago in Tokyo, either the romanist must be an unskilful portrait-painter or things must present themselves in diametrically different forms to different eyes.

Our readers doubtless remember that some time ago a man made his way into the house of Mr. Shimada Saburo and performed some antics which led to his arrest and subsequent arraignment on a charge of attempted assassination. The impression circulated at the time was that the man desired to take vengeance upon Mr. Shimada for the writings in the *Mainichi Shinbun* which were supposed to have contributed to the murder of Mr. Hoshi Toru. But the Tokyo Local Court has now found that Oora Tomitaro, as the man is called, was not actuated by any murderous design against Mr. Shimada, his only object being to demonstrate his own worthiness to be re-admitted to the ranks of the *soshi* from which he had been expelled. We are reminded of Dr. Johnson's greeting to the fisherwoman:—"Madame, under pretence of keeping a bawdy shop you are a receiver of stolen goods."

It will be remembered that some time ago a wholesale seizure of Japanese fishing schooners was made by a Russian cruiser, and that the crews of the captured vessels, with the exception of 8 men, were allowed to return to Japan. The Japanese claimed that they had been engaged in a perfectly legitimate operation, namely, the lading of salted fish in accordance with an agreement to which Russian subjects were parties. News has now been received from Vladivostok, however, to the effect that the judgment of the court was against the Japanese, that they were sentenced to 1½ months' imprisonment, and that their vessels were confiscated. Whether the latter announcement covers the whole of the captured schooners, 11 in number, the telegram does not make clear.

It has occasionally occurred to Japanese publicists to compare Japan and Italy, and some have even affirmed that the former is

nearly as heavily taxed as the latter. Now the latest statistics show that in 1903 the Italian State taxes are 17.80 yen per head of the population, and if the local taxes be added, each Italian, man, woman or child, pays 23.20 yen per head. In other words, if the Italian rate were applied to Japan, the people of the latter would be paying a total of about a thousand million yen annually in taxes. What they really do pay is one-fifth of that amount. A very striking essay about the condition of Italy has just been written by Signor Giglioli. Among other unpleasant facts he shows that in one year there were among the peasants 72,603 cases of pellagra, a disease caused by eating decayed grain.

Rats infested with pest bacillus have been found in the Akasaka district of Tokyo and in the warehouse of the Nippon Yusen Kaisha in Kayabacho. Considerable alarm has been caused by these discoveries, and there is talk of erecting a zinc fence round the Akasaka Palace.

We are asked to state that at the Charity Concert held at the British Legation on the 5th inst., 277 tickets were sold which, together with a donation from H. I. H. Princess Kanin, realized yen 856. This sum has been handed to Doctor Teusler.

In an article on the "Ten Temples of Abydos" in *Harper's Magazine*, Professor Flinders Petrie tells of his discovery of a statuette of ivory more than 6500 years old, and how he managed to preserve it:—

"Groping in the thick brown organic mud of this rubbish-hole," says Professor Petrie, "I lifted out one by one the priceless examples of glazed work and ivory of this earliest age of great art—an art of which we had never understood the excellence from the traces hitherto known. The ivory was sadly rotted, and could scarcely be lifted without dropping asunder in flakes. So when I found that I had touched a piece it was left alone, and other parts were cleared, until at last a patch of ground was left where several pieces of ivory had been observed. Cutting deep around this, I detached the whole block of sixty or eighty pounds of earth, and had it removed on a tray to my store-room. There it dried gradually for two or three weeks; and then with a camel's-hair paint-brush I began to gently dissect it and to trace the ivory figures. Not a single piece was broken or spoiled by thus working it out, and noble figures of lions, a bear, a large ape and several boys came gradually to light. Suddenly a patterned robe and then a marvellous face appeared in the dust, and there came forth from his 6000-year sleep one of the finest portrait figures that have ever been seen. A single photograph can give but little idea of the face and the expression, which changes with every fresh light in which it is seen. Wearing the crown of Upper Egypt, and clad in his thick embroidered robe, this old King, wily yet feeble with the weight of years, stands for the diplomacy and statecraft of the oldest civilized kingdom that we know. No later artist of Egypt, no Roman portrait-maker, no Renaissance Italian, has outdone the truth and expression of this oldest royal portrait, coming from the first dynasty of Egypt."

BEHIND THE SPEAKER'S CHAIR.

It is many years now since Mr. H. W. Lucy started writing the *Diary of Dog Toby*, M.P., for the columns of *Punch*, but despite the passage of years he manages to keep the narrative as crisp and diverting as when he first set out upon the task. The same interesting air of brisk freshness pervades the book which he has just published through Messrs. Newnes, which he entitles, "Peeps at Parliament. Taken from Behind the Speaker's Chair." The volume deals with the years 1893, '94 and part of '95, and, alas, many of the men whom he mentions have passed to "where beyond these voices there is peace." Still for all that the book is decidedly worth reading. Mr. Lucy is

one of those who believe that the main foundation of the position which the House of Commons holds among the Parliaments of the world is its condition of volunteered unremunerated service:—

In spite of sneers from disappointed or flippant persons, a seat in the House of Commons still remains one of the highest prizes of citizen life. When membership becomes a business bringing in, say, £5 a week, the charm will be gone. As things stand, there is no reason why any constituency desiring to do so may not return a member on the terms of paying him a salary. It is done in several cases, in two at least, with the happiest results. It would be a different thing to throw the whole place open with standing advertisements for eligible members, at a salary of £300 a year paid quarterly. The board of impecunious babblers and busybodies attracted by such a bait would trample down the class of men who compose the present House of Commons, and who are in various ways in touch with all the multi-form interests of the nation.

Mr. Lucy is not always in this serious vein: he has too many good stories to tell for that to continue long. Some of them concern the all-night sittings and the difficulty of getting members to remain at their posts. Here is one which seems new:—

It was in the Parliament of 1880 that a messenger from the Government Whip went forth in the early morning in search of a member. He lived in Queen Anne's-mansions, and the messenger explaining the urgency of his errand, the night-porter conducted him to the bedroom of the sleeping senator. Succeding in awakening him, he delivered his message, "Give my compliments to Lord Richard Grosvenor," said the wife of the still somnolent M.P.; "tell him my husband has gone to bed, and is paired for the night."

How Parliament insensibly changes some of its former most rigid rules in sympathy with the changes in the nation is well-illustrated by its attitude towards dress. Thirty years ago, Mr. Lucy points out, no one would have thought of entering the precincts of the House wearing anything other than the "consecrated stovepipe hat." It was the Irish members who broke down this ancient custom, as they have broken down some others:—

John Martin was, so far as I remember, the first member who crossed the Lobby of the House in a low-crowned hat. But he shrank from obtruding it on the notice of the Speaker. He carried it in his hand, stowing it away out of sight during a debate. Even this modest demeanour led to an interview with the Speaker, Mr. Brand was then in the Chair. He sent for Mr. Martin, courteously but firmly explained to him that he was breaking an unwritten law of Parliament, and asked him to provide himself with the headgear usually seen at Westminster. Mr. Martin at once obeyed the injunction—a conclusion of the story which shows how far we have marched since that time.

We conclude with one further extract which relates not to the House of Commons but to one who played a very important part in its history during the nineteenth century—Mr. Gladstone. It is a story connected with his childhood that will not be found in *Morley's "Life"*:

The reminiscence belongs to the records of a country house, and it is Mr. Gladstone who recalls it. Mr. Henry Chaplin was a fellow-guest. Mr. Gladstone one evening asked him whether his grandmother had not lived in a certain street in Mayfair. Mr. Chaplin assented. "Ah!" said Mr. Gladstone, "I remember it very well. I lived next door to her when I was a child. She used to give evening parties. When the carriages were assembled to take up, my brother and I used to creep out of bed—it was in the summer time—softly open the window, get out our squirts, and discreetly fire away at the coachmen on the boxes. I remember the intense delight with which we used to see them look up to the sky and call out to each other whether it wasn't beginning to rain."

Mr. Lucy's volume is illustrated by Mr. F. Carruthers Gould, and he has been lucky in his illustrator.

The Taunggyin Sayadaw has been installed at Mandalay as Thathanabaing of Upper Burma. This is equivalent to the rank of Archbishop.

DOMESTIC POLITICS.

WHATEVER may be said by political agitators as to the certainty of an immediate struggle between the Cabinet and the political parties on the subject of foreign affairs, thoughtful persons must find some difficulty in endorsing that forecast. There is nothing in the resolutions passed by the *Seiyun-kai* or in the utterances of their leaders to suggest that such a line will be adopted. Questions will be asked: that is pretty certain. But should the Government declare that the interests of the State impose reticence, can any political party impeach the Ministers of the Crown for preserving silence? The Progressists, indeed, have adopted resolutions which amount to impeachment of the Cabinet, but there is not the smallest indication that the *Seiyun-kai*, despite their ostensible *cunctate* with the Progressists, will follow the latter into that lobby. Beyond all doubt if the parties thus unite to deprive the Ministers of an essential prerogative, the right of choosing times and seasons for taking the public into their confidence as to details of foreign policy, the Ministers on their side will advise the Sovereign to dissolve the Lower House, and the world will say that the Lower House was rightly served. Even in the matter of questions there will have to be circumspection, for at any stage of a series of queries the Cabinet can interpose an imperative veto to which the questioners must bow, unless they determine to adopt the indefensible position suggested above. Here, then, we conclude that there is no bond of effective union for destructive purposes between the two parties. More probable is that they will have recourse to the familiar weapon of attack, administrative and financial reforms. It does not admit of any doubt, in our opinion, that a wholesale reformer is needed, a statesman with a genius for reform and with the courage of a revolutionist. But the point for immediate consideration is the two parties' allegation that the Government has not kept its promises in this matter. Can that be proved? At the time of the celebrated compromise last spring, the Government asked the *Seiyun-kai* to vote the scheme of naval expansion in consideration of the Treasury's pledge to find the necessary funds without recourse to additional taxation. The Treasury catalogued its resources: administrative retrenchments representing 1 million *yen* annually and aggregating 10 millions in the course of the ten-year period of naval increment; reduction of telephone outlays by one half of a million during the same period; reduction of railway outlays by 45 millions, in 10 years, and floating of public bonds to the extent of 55 millions in 10 years; the total fund thus brought into sight being 110½ million *yen*. But the Government has more than carried out that programme. It has effected administrative retrenchments amounting not to one million *yen* annually, but to nearly 5

millions, and by means of these retrenchments it is enabled to dispense almost entirely with the bond-issuing item of the programme. It will not be easy, therefore, to construct an effective indictment out of any materials here offering.

After all, too, there remains the query, what statesmen are prepared to form a Cabinet in lieu of the present Ministry? Whatever may be said, Marquis Iro stands just as supreme as he has ever stood. With him, after the EMPEROR, the last word rests. Again, whatever may be said, the *Seiyun-kai* are under Marquis Iro's guidance. Has Marquis Iro any desire to take the reins out of the hands of a Ministry of whose policy in foreign affairs he is undoubtedly an approving observer, nay much more than an approving observer? Is this the moment when Marquis Iro wishes to resume an office which has always been within his immediate reach for many years past, and will remain within his immediate reach so long as he lives? It appears to us that the danger of the parliamentary situation lies outside the deliberate policy of the party leaders: it lies in minor issues which, through the insubordination of the rank and file of the parties and the intrigues of agitators, may be perverted into means of precipitating a collision.

FIRES.

On the night of Thursday (the 3rd) about 10 o'clock, fire broke out in an unoccupied house at Chitose-cho, Yokohama. At the time there was a strong south-westerly wind and the flames extended immediately to the 2nd and 3rd streets of Miyoshi-cho, burning over 100 houses, including the low class inn, Iwasawa-ya, where a case of plague recently appeared. The cause of the fire has not yet been ascertained, but the Kotobuki-cho police believe it to be incendiary. A coal yard where about 2,200 tons of coal—the Mitsu Bishi, about 600 tons, the Sekitan Shokai, about 800 tons, and Mr. Baba, about 800 tons—were stored, also took fire, a portion of the contents being burned. The following morning, two dead bodies were found at Miyoshi-cho, and four children are reported missing.

A youth was arrested on Dec. 5th by the Kotobuki-cho police on a charge of incendiarism connected with the recent fire at Miyoshi-cho, Yokohama.

An outbreak of fire occurred on the night of Dec. 2nd at Asakusa, Tokyo, destroying three houses. Tobacco embers are reported to have been the cause.

Fire occurred on the night of Dec. 4th at Hanakawado, Asakusa, Tokyo, destroying one building.

The following morning, a fatal fire occurred at Ichigaya, Tokyo, burning down one house. Two men who were sleeping in an upper room of the building were killed.

The Saisai-ko Academy, Kumamoto, was destroyed by fire on the morning of Dec. 8th. The building cost *yen* 250,000.

On the morning of Dec. 9th, fire occurred at the village of Kakino, near Hiratsuka. One house was destroyed, a girl killed, and her father severely injured. It appears that the unfortunate girl was filling lamps with kerosene oil from a can into which a burning match accidentally slipped.

A telegram from Tokushima states that fire broke out on Dec. 9th in the village of Kuramoto, destroying 11 houses and damaging 7 others.

Fire broke out on the evening of Dec. 9th at Daikumachi, Osaka, burning down nine houses. It is reported by the *Asahi*, that the building was insured in the Nippon Fire Insurance Company for *yen* 6,000.

CONCERT AT THE BRITISH LEGATION IN TOKYO.

The concert at the British Legation in Tokyo on the 5th instant proved a signal success, as might have been anticipated. A very large number of tickets were taken by the public, but such excellent arrangements had been made by Lady MacDonald that ample accommodation offered for all. Her Imperial Highness Princess Kanin graced the occasion with her presence, and it need scarcely be added that the audience included most of the prominent residents of Tokyo, diplomatic, official and private, as well as several people from Yokohama. The programme is appended. All the numbers were excellently rendered but the greatest enthusiasm seemed to be aroused by the playing of Dr. Von Koeber and the singing of Mr. Maitland. In the interval between the parts His Excellency Sir Claude MacDonald made the following remarks:—

YOUR IMPERIAL HIGHNESS, YOUR EXCELLENCIES, LADIES AND GENTLEMEN.—I should like to say a few words with regard to the Charity which you are so materially assisting by your presence here to-night.

St. Luke's Hospital is the property of the American Church Mission in Japan. The running expenses of the Hospital amount to some 13,000 *yen*, and the appropriation from the Mission Board covers about 1/10 of that sum, the rest being made up from hospital earnings, and the contributions of friends.

The recent additions to the building, consisting of operating and sterilizing rooms, have seriously taxed the resources of the Hospital and it is very much in need of a separate building to care for infectious cases. It is to assist in erecting this that the concert is given. I am informed that the cost of such a building will be between three and four thousand *yen*. Of this, upwards of one thousand I think I see before me to-night, and it gives me great pleasure to announce to you that the munificent sum of 1,000 dollars gold, upwards of 2,000 *yen*, has been handed to my wife towards this charity, by Mrs. Mary C. Thompson, an American lady, who recently visited this country, and who by this gift has added one more to the numberless acts of charity for which she is well-known.

It now only remains for me to thank Dr. Von Koeber, Professor Junker, and the artists who so ungrudgingly and so charmingly are giving of their best in the noble cause of charity.

PROGRAMME.

1. TRIO in B flat majorRubinstein.
Dr. v. Koeber, Prof. Junker and Mr. Davis.
2. SONG—
a. Komm, wir wandelnP. Cornelius.
b. Es war zur ersten Frühlingszeit...Tschatskowsky.
Mrs. Payne.
3. SCHERZO, for Cello and Piano.....Rubinstein.
Mr. Davis and Dr. v. Koeber.
4. SONG—Hungarian Song, arranged by Korbay.
Mr. Maitland.

INTERVAL.

5. PIANO SOLO—
a. MädeChopin.
b. TarantellaLiszt.
Dr. v. Koeber.
6. Song—Good NightDvořak.
Mrs. Payne.
7. CONCERTO for two ViolinsAlard.
Prof. Junker Miss Ko Koda and Miss N. Koda.

BOOKS RECEIVED.

We have received from Max Nösler and Co., the German Booksellers who recently opened a branch store in Main Street, Yokohama, a copy of Herr. H. Gottwaldt's Volkswirtschaftliche studie entitled "Die Ueberseeische Auswanderung der Chinesen und ihre Einwirkung auf die weisse und gelbe Rasse." Printed at Bremen, the brochure is capably produced in clear type and on heavy paper, while the letterpress is characteristically thorough in every way.

We acknowledge receipt of the statistical report on Japanese railway lines, for 1902, published by the Department of Communications. It gives, as a supplement, a detailed plan with regard to railways which are already constructed or are proposed.

TESTIMONIAL TO MR. B. GILLETT.

The testimonial to Mr. B. Gillett, which has been signed so generally by the community during the past few days, was presented to him on Wednesday last at the Masonic Rooms in the presence of a large company of ladies and gentlemen. It will doubtless be in the recollection of our readers that at the last meeting of members of the foreign community held in March for the purpose of passing the accounts and transacting other business connected with the Cemetery a strong conviction was expressed by those present that the foreign residents should recognize the long-continued, devoted and valuable services rendered to the community by Mr. Gillett, Honorary Secretary and Superintendent of the Cemetery. A proposal was then made that a service of plate should be provided and presented at a meeting of the community called with that object, but Mr. Gillett in unmistakable language set his veto on that scheme. If it was desired to present to him a testimonial then he said let them give him a written testimonial which would cost little and would bear the names of those who wished to show their appreciation. But he wished them not for a moment to think of giving him a service of plate. He should not know what to do with it and he had no one to whom to leave it as an heirloom. Mr. Gillett's wish, of course, was adopted and a Committee consisting of Messrs. James Walter, J. P. Mollison and A. Bellamy Brown were appointed to take the necessary steps.

The Testimonial which the Committee have prepared for the signatures of members of the community is a beautiful piece of work. The Address has been most artistically engrossed and illuminated by Miss Schwabe and enclosed in purple plush covers—of the simplest and plainest type at Mr. Gillett's own request—and is, as well in the sentiments conveyed on its two pages as in the great array of signatures which attest it, a striking example of the unanimity and gratitude with which his fellow-residents view Mr. Gillett's long and devoted services.

Soon after 4.30 Mr. J. Carey Hall H.B.M.'s Consul-General at Yokohama, took the chair on the motion of Mr. James Walter. After the lapse of a few minutes,

The CHAIRMAN called the meeting to order. Very few words from him, he said, would suffice by way of preface to introduce the business of the meeting. It would be in the recollection of many of them that this meeting was held in consequence of proceedings that took place at the last annual meeting of the Cemetery Committee—or rather, he ought to say, the meeting of the community before which the report and accounts of the Cemetery Committee were annually laid. On that occasion, as he found from reference to the report of the proceedings in the press, it was felt to be the unanimous sentiment of the community that some special mark of recognition and acknowledgment should be given to Mr. Gillett for his uninterrupted services of a quarter of a century. Some discussion took place as to the form, but finally in accordance with Mr. Gillett's own wishes it was decided that it should take the form of a testimonial (applause). He called on Mr. J. P. Mollison to read that testimonial.

Mr. MOLLISON said:—Mr. Gillett: The pleasing privilege has been accorded me of offering for your acceptance to-day, the address which I hold in my hand, and I need not tell you how highly I value the honour of the position I find myself in, on such an interesting and memorable occasion. The address is signed by 256 of your fellow residents and is intended as an affectionate recognition of the sacred trust you have taken upon yourself in caring for the community's Dead during a long period of years. How diligently and faithfully you have fulfilled that self-imposed duty, no one knows better than myself, and it is therefore with a keen sense of personal gratitude that in the name of the signatories I offer you this testimonial. With these few and altogether inadequate words, I will with your permission now read the address.

To BARZILLAI GILLETT, ESQ.

No. 24, Yamashita-cho,
Yokohama.

DEAR MR. GILLETT,—We, the undersigned residents of Yokohama, desire to express our warm appreciation of the unselfish, unobtrusive and unflinching services you have rendered to this Community as Superintendent of the General Cemetery for a period of over a quarter of a century.

We desire to record our unfeigned admiration of the lofty sense of duty and the true kindness of heart that have prompted you to devote so much time and thought all these years to the care of the Cemetery, bringing order out of confusion, and converting what was formerly a neglected wilderness into a veritable Garden of Sleep; a fitting resting place for our dear ones who have passed away.

Whilst assured that in all your work you have been actuated by that highest amongst virtues, love of your fellowmen, without thought of recognition or reward, it is none the less undeniable that you have placed us, your fellow-residents, under a debt of gratitude that can never be repaid. All we can do is to tender you our most grateful thanks for what you have done and are still doing, and assure you that the memory of your labour of love amongst us will always remain in our hearts, and go down to our posterity as fresh and fragrant as the grass green mounds that for so many years have had your constant and loving care.

We are, Dear Mr. Gillett,

Your affectionate friends

[Here follow the signatures.]

That, Mr. Gillett, is the address which I have now the honour to ask your acceptance of, and I would just add that whilst this will always remain a red-letter day in our lives, we trust it may not be an altogether unremembered one in yours.

Mr. B. Gillett, who was greatly affected, assured the Chairman and Mr. Mollison that they had his sincere thanks for the very kind expressions they had been good enough to make about him. Truly he had met with nothing but kindness from those he had come in contact with in taking care of the Cemetery. He remembered that eight or nine years ago while the Chairman was Her Majesty's Consul here he had from time to time to have recourse to Mr. Hall to talk over matters of the Cemetery, and he took this public opportunity of testifying to the kindness and urbanity with which the Chairman always met him. That Mr. Hall always took an interest in the Cemetery was remembered by many present, but in addition to this at one of the annual meetings that gentleman made a remarkable speech which, the speaker thought, created a great impression on the minds of people. To this day again and again he was asked whether it had been reported and where it was obtainable. And now he said to the ladies and gentlemen present and to the Committee who had put this testimonial through, how could he thank them? Surely they would believe it to be the outcome of his heart when he thanked them with all the fervency and all the affection that one man could express to another. And to all dear friends what should he say? Truly he had been among them for many years; truly how many had they seen deposited in the Cemetery; truly how often had he seen some one or other, who had just laid there a loved form, and was watching and tending, and watering the flowers. Let them carry their minds to the Cemetery itself and think how many esteemed friends had been lost and were lying there. Did they not think it was a pleasure and a gratification to go about and see that those last resting-places were kept in proper order, and that it was not more than one man's duty to another to do these things—especially in a small place like Yokohama (Applause). What he had been able to do for the Cemetery had been a labour of love. (Applause). He never expected for a moment that he would be rewarded for it and when it was proposed some years ago he put his foot down and said "No, never!" However, time went on and the matter came up again, and it was proposed that a silver plate should be given to him but he said rather would he have a testimonial such as they had now presented to him. (Applause). It was rather too good. ("No, no.") Whatever he had done had been from the bottom of his heart. He assured them again he was truly thankful for the testimonial.

He asked them to believe that when in his declining years he was sitting in his own lonely room whether in dear old England or in Japan, thinking perhaps of things gone by, he should take that testimonial, read the affectionate expressions in the address, look through the list of names and say "that man, that man, and that man I knew." Did they not think that would lead him to profitable thought? So much regard had he for his friends in Yokohama that wherever he might be he should look back to his going in and out among them and be truly thankful that he was ever able to contribute in any way to their satisfaction in connection with the Cemetery. (Applause.) He asked his dear friends, and especially some among the younger of them, as they passed through the Cemetery when he might not be here or might have passed away and perhaps have been laid to rest there,—he asked them as they looked at the surroundings to think that once there was an old man who served that Cemetery for many years and that to him its present appearance was mainly attributable. Whether he was thought of as "Flipperty-Gillett," or "Old Buster," or "Uncle," or "B.G." he wished them to remember that he was an old man and that his name was B. Gillett. They could rest assured that testimonial would be a valuable possession to him, that he would ever look on it with pleasurable contemplation and joy, and that it would be a solace to him in the declining years of his life. "God bless you all!" he said in conclusion; "and my only hope is that you may all be blessed in your households and in your stores and that every good wish will accompany you." (Applause.)

Mr. JAMES DODDS said before moving the resolution which would bring the meeting to a close he thought it was but right to give expression to their appreciation of the manner in which the Committee, Messrs. James Walter, J. P. Mollison and A. Bellamy Brown, had performed the duty entrusted to them in drawing up the testimonial just presented to Mr. Gillett. He thought everybody would agree that it had been done in a very efficient and graceful manner. (Applause.) Further in this connection he would venture to mention the name of Miss Schwabe, whose neat and dainty work was seen in the scroll that had been placed on the table. (Applause.) It had been said that the beauty of it might be increased by the addition of Mr. Gillett's monogram and by having the corners mounted in silver. Mr. Gillett had objected to any larger contribution of silver but it might be hoped he would object to that. In asking the meeting to join in a cordial vote of thanks to Mr. Hall, who had taken the chair, he would go farther and tender to the Chairman a hearty welcome to his old post in Yokohama, express their pleasure at and congratulate him upon the special marks of favour which he had recently received at the hands of his Sovereign, and express the hope that they would see him frequently take the lead in matters pertaining to the welfare of the community as he had done that day. (Applause.)

The CHAIRMAN thanked Mr. Dodds and Mr. Gillett for the kind words they had spoken about his return to Yokohama and his former consular post. He desired to associate himself in the fullest manner possible with the spirit as well as the language of the address. The care of the dead was one of the greatest privileges of humanity; it must be done by a special organ, and right well had Mr. Gillett discharged that duty for the community of Yokohama during the past five and twenty years. It was a work of some trouble to express the sentiments of the community in an address, but he thought all would agree that the Committee had discharged their duties in a most appropriate way. He therefore asked the meeting to record their approval of Mr. Dodds' motion by "Ayes" and "Noes" and the answer was unanimous in the former sense. He desired to thank them most heartily for the kind words that had been said, and declared the meeting closed.

The company then dispersed most of them, however, first shaking hands with Mr. Gillett.

Colonel H. Yoda, of Infantry, has been promoted Major-General and appointed commander of the 4th Brigade of Infantry.

NOTES ON THE RULES OF THE NIPPON RACE CLUB.

(COMMUNICATED BY A.R.C.)

SCALE OF WEIGHT FOR AGE:—Rule 44 gives a uniform difference of 5 lbs per year, from 3 years to 6 years, regardless of distance, or times of the year. Under no recognized scale of weight for age elsewhere in the world does a 5 years old horse get 5 lbs from older horses in any race over any distance on the flat. In England, 5 year olds, 5 year olds and aged horses run on even terms in all races up to two miles throughout the year. In Australia, 4 year old horses run on even terms with 5 year olds, 6 year olds and aged horses, in all races up to 1 mile in May, and receive 1 lb only from the older horses in races up to 1½ miles. In November, 4 year olds receive 1 lb in races up to ¾ mile; 2 lbs in races up to 1 mile and 3 lbs in races up to 1½ miles.

Australian horses are raced more largely in India than in any country outside their own. The following table is taken from the scale of weight for age in use throughout India:—

Races in May for Australians:

	¾ m.	1 m.	1½ m.
	lbs.	lbs.	lbs.
3 year olds;.....	125	124	121
4 year olds;.....	129	129	128
5, 6 and aged;	129	129	129

In November:—

	lbs.	lbs.	lbs.
3 year olds;.....	116	113	110
4 year olds;.....	128	127	126
5, 6 and aged;	129	129	129

An addition all round of 6 lbs. to the above weights, would make the scale suitable for our requirements here. The minimum weight for a 4 year old would be 132 lbs. as against the present N. R. C. scale weight of 130 lbs. Some of our riders cannot manage 130 lbs. but can just do 132 lbs.

AGES OF AUSTRALIAN HORSES:—Rule No. 64 reads: "Age of horses in Japan to be reckoned from 1st January. In practice the ages of subscription griffins are taken from the advices received with each shipment. But this works unfairly. Let us suppose that two horses are foaled on the same day, in September, 1899, thus being 4 year olds in Australia on 1st August, 1903. One is sent up here for the November Meeting, 1903, and the other for the Spring Meeting, 1904. The former is called a 5 year old on 1st January, 1904, and runs as a 5 year old throughout 1904. The latter runs as a 4 year old throughout 1904; a difference of one year between two horses foaled on the same day! Now that the Club have an official veterinary surgeon, there is no excuse for such an anomaly. But in any case the Club should recognize that Australian horses take their age from the 1st August, and make the change in their age before the Autumn Meeting, not before the Spring Meeting.

DECLARATION TO WIN, RULE No. 46:—"A member is allowed to enter and run more than one horse for a race, but must declare before the race which will win if able." The declaration rule was originally intended to allow an owner, if he so desired, to have one of his horses pulled to let the other win if they were leading at the finish of a race. In the N. R. C. rules the word "must" has evidently been substituted for the word "may" in error, as a compulsory declaration can never have been intended: that would lead to strange complications. In practice owners do not declare which will win, the usual phrase being here, "Mr. So-and-so declares best to win." This is a meaningless evasion of a meaningless rule. The declaration rule has been abolished in Australia and in India, and each horse must run on its merits. In the N. R. C. rules, the word "must" makes nonsense of the whole thing, and should be replaced by "may," or better still, do away with the declaration and make the rule read:—"A member is allowed to enter and run more than one horse for a race, but each horse must run on its merits." V. R. C. and C. T. C. rules add:—"and no plea of declaration shall entitle an owner to prevent one of his horses winning in order to win with another."

YOKOHAMA LITERARY SOCIETY.

A deeply interesting paper dealing with the early history of Yokohama, compiled by Mr. G. W. Rogers, was read on Friday evening's meeting of the Yokohama Literary Society. Mr. Rogers was shipwrecked off Onaisaki in December, 1859, while on a voyage to Yokohama, and after that took up his residence at this port. His paper dealt with the aspects of the Settlement at its inception, a short description of some of the earlier residents, some personal reminiscences connected with the cutting down of several foreigners in and around Yokohama, and concluded with some hints as to the roughness of life as well as some of its interesting sides in the early 60's. At its close, the President moved that a hearty vote of thanks be accorded to Mr. Rogers for his very interesting paper. He was glad that one more of the old residents had placed his recollections on paper before it was too late, and perhaps his example might stimulate others to look over the back pages of their memories and tell once again for the benefit of the rising generation, the stories of their youth. The vote was carried by acclamation.

The second half of the meeting was devoted solely to music, the following programme being much enjoyed.

1. Song....."The Yeoman's Wedding" *...
Poniatowski.
Mr. S. H. Somerton.
2. Violin Solo....."Loure" *.....Bach.
Mr. H. A. Poole.
3. Song....."After" *.....Edward Elgar.
Mr. B. C. Foster.
4. Piano Solo....."Selected".....
Miss Poole.
5. Song....."The sweetest flower that blows"
Mr. N. G. Maitland.
* Encored.

FOOTBALL.

For the second time in two years the Keiogi-juku University has put a team of enthusiastic Rugby football players into the field against a fifteen of the Y. C. and A. C., and for the second time they have sustained defeat. It was not the fault of the students that the fortunes of war went against them on Saturday. They knew the game and the intricacies of the rules to a nicety, but they lacked weight, strength and speed, and this, it must be acknowledged, is a tremendous handicap. Still for all that they played doggedly, arousing the enthusiasm of the spectators by their pluck and winning the admiration of their opponents for their knowledge of the game. At half time the Y. C. and A. C. had scored 3 goals and 2 tries to nil; while at the close of the game the score stood: Y. C. and A. C., 7 goals and 3 tries=44 points, to nothing. We hope that another match will be arranged with the University ere the season closes. The following were the teams:—

Y. C. and A. C.:—Back, K. van R. Smith; ¾ Backs, A. N. Other, B. C. Foster, E. W. Kilby, J. Cartwright; ¼ Backs, J. E. Moss, H. E. Hayward; Forwards, W. S. Moss, F. W. R. Ward, F. Pollard, W. J. White, W. B. White, A. Kingdon, W. J. Waddilove and R. C. Bowden.

Keiogi-juku University:—Back, Y. Kita; ¾ Backs, F. Yamasaki, M. Matsuoka, S. Hamada, K. Okamoto; ¼ Backs, W. Ogura, H. Kaiyeda; Forwards, S. Ogawa, T. Hatori, M. Hatori, M. Yamada, S. Sano, Y. Yoshiake, C. Kuroye, K. Kawasaki, F. Takiki.

The result of the election of Y. C. and A. C. Captains for Rugby and Association football, held on Saturday last, resulted as follows:—Rugby: Captain, W. S. Moss, Vice-Captains, S. Wheeler and F. O. Stuart; Association: Captain, H. W. Kilby, Vice-Captains, J. E. Moss and O. D. Strome.

The competition between the Government railway and the Kwansei railway, between Nagoya and Osaka, is increasing in seriousness. The former has reduced the rate of freight to sen .0037 per ton per mile and the latter has also cut down the rates to a similar figure and issued free first class tickets to owners of goods carried between the two cities.

THE LAW COURTS.

THE ALLEGED SILK FRAUDS.

The trial of Messrs. Alfred Le Prevost and Carl Bremer and three Japanese who are alleged to be involved in certain silk frauds, was resumed in the Yokohama District Court on Saturday Dec. 5th before Presiding Judge Watanabe, and two associates, and Public Procurator Nakamura.

Mr. Akiyama and the other lawyers employed in the defence were present as usual.

The Court sat at 10.10 a.m. when the examination of Mr. Le Prevost, which was adjourned on the 2nd, was continued.

The accused stated that he tendered his resignation to Messrs. Cornes & Co. in order to give them an opportunity of making him a partner and on the other hand he gave up in the end of December the intention to secure the business of Robison & Co. When the accused tendered his resignation, he talked to Mr. Weale about his intention to start himself in business. The business was that of Mr. Bremer, of Messrs. Fraser, Farley & Co., but there was no necessity to explain to Mr. Weale about his ideas. His resignation was presented to Mr. Weale on Jan. 31st or in the beginning of February and he asked the latter to convey it to Mr. Cornes in London. Mr. Weale said if it was sent on Mr. Cornes would probably close the silk business. Mr. Weale asked him to think the matter over for a day, before he made up his telegram to Mr. Cornes, to see if there was not some way of coming to an arrangement. Mr. Weale did not want him to resign, but told him that Mr. Cornes intended to make him a partner later on. He then got out a private letter from a file and—though witness did not know whether the words were there or not—read something from the letter which showed that Mr. Cornes intended to make him a partner. Mr. Weale said, "Think it over for a day or two and I will send a wire to Mr. Cornes." On thinking it over accused thought he had better assume a stronger attitude and make the firm think out something for themselves. Before the telegram was sent he suggested that he should make an arrangement with Mr. Weale and go on executing Cornes & Co.'s orders. Mr. Weale said he would wire and write to Mr. Cornes and, as there was no particular hurry, the matter was left like that. He (Mr. Le Prevost) then had to consider the question of starting for himself. He spoke to Mr. Bremer and found Mr. Bremer's idea different from his suggestion of December. His idea was to transfer the name of Fraser, Farley & Co. to the syndicate, but Mr. Bremer's idea was that he (Mr. Le Prevost) was to join him in partnership. He told Mr. Bremer that he had written to different people abroad in the meantime. Mr. Bremer had been disappointed about the London business and told him that he could have the orders of the people he had written to, but that if he started, these customers would be transferred to him. In March Mr. Weale got a reply from Mr. Cornes and sent for him to discuss the matter. There was some talk about a general partnership. But he did not give Mr. Weale any definite reply and, a few days afterwards, Mr. Weale accused him of doing business on his own account, an accusation which he denied. He replied that he had not started doing business because negotiations had been going on between them. A few days later he saw Mr. Weale again at the latter's request and outlined to him his ideas of the terms he would accept. In May he was surprised to find that Mr. Weale was negotiating with Mr. Arone; he thought it was quite hopeless to fix up matters between Mr. Cornes and himself, and he commenced to prepare his codes. Mr. Bremer let him have a room upstairs at 128 (Fraser, Farley & Co.'s) where he could work quietly. He did not see Mr. Weale again till June. Mr. Weale came to see him then and gave him to understand that Mr. Cornes did not intend to change the partnership. He then asked Mr. Weale to let him off then instead of waiting till the end of July. Mr. Weale said, "Of course, when you leave, we want to know what your interest in the department is and, I think, we had better find somebody here to value the stock."

There was talk about valuing the stock but Mr. Weale suggested, instead of winding up the department in this way, turning over the whole concern to him and asked if he would take the stock over at cost price. He replied that it was a very good proposal and that he would think over it. He did so for a day or two and then wrote to Mr. Weale the conditions on which he would take over the business as from the 1st of July. This came to nothing, however, as accused wanted to have Cornes & Co.'s books for two years for reference. Finally he offered to take over the stock at inventory prices and Mr. Weale could keep the books. Mr. Weale asked how about the loss, and witness said Mr. Weale would have to stand that. Mr. Weale became excited and said he would keep the business himself. On August 2nd accused handed over the keys to Mr. Weale and on the 5th he received a formal letter from Mr. Weale declining his offers of June 28th and July 9th. A few days afterwards he received from the Ku Saibansho a copy of a statement made by Mr. Weale applying to the Court to appoint somebody to examine the goods in the godown of the silk department—for the preservation of evidence, he thought. This was his interpreter's translation of the document. Mr. Weale's declaration stated that on account of the unsatisfactory management of the silk department the firm had instructed Mr. Le Prevost to close it on the 30th of June and to furnish a statement. Mr. Le Prevost had delayed making this statement on various pretexts, but had finally sent them the keys of the godown by a banto, since when they had not been able to find him. It implied he had disappeared. He saw his lawyer and was told to wait and attend at the godown on a certain date when the judge would verify the contents of the godown. At that time he thought Mr. Weale was trying to find some cause to make a civil claim against him for damages, but a few days afterwards, seeing the papers were full of statements about the case, he thought it looked as if Mr. Weale meant to take criminal proceedings. He had no anxiety on that point, however, because he knew that if any proceedings commenced he would be able to clear himself, for every thing was in order. He was advised by Mr. Sutton, of the Chartered Bank, to try and arrange the matter with Mr. Weale, and later, through Mr. Baker, of the Hongkong and Shanghai Bank, who had sent for him, he made an offer to bear a third of the loss—he thought it was only fair to do so as he had been getting a third of the profits. Mr. Baker told him he could fix the matter if he would pay the whole loss, yen 30,000, telling him if he got in a Japanese court he never knew when he would get out. Accused said it was an imposition and refused to pay.

Continuing his statements in answer to the Court, accused said that he advised Mr. Bremer to take over Fraser, Farley & Co. At the Hongkong and Shanghai Bank, it was stated the firm was very respectable and one in which confidence could be placed. He made no special investigation into the affairs of the company, but he knew their silk goods customers, who were as far as he knew only two—Harperink, Smith & Co. and Blankenburg & Co. Mr. Bremer might possibly have secured these two customers without taking over the firm, but they would have had to refer to the banks and make inquiries. By making a transfer of the business he got the connections at once. He also had an idea that Mr. Bremer wanted to do something in Government contracts, and as these could only be taken up by firms established in Japan, this was another inducement for him to take over the firm. He did not hear this till afterwards, however. There was no agreement or contract between himself and Mr. Bremer as to the dealings between Fraser, Farley & Co. and Cornes & Co., but there was an understanding that Mr. Bremer would take his orders to Cornes & Co. All the goods delivered to Fraser, Farley & Co. were against orders booked by that firm. The reason why the goods were not entered in Cornes & Co.'s books as bought by Fraser, Farley & Co. was that he did not wish to disturb Kahn and Kahn's feelings. Cornes & Co. had a contract

with Kahn and Kahn not to ship to anyone else in Europe. Kahn and Kahn were rather suspicious people, and he was afraid if they heard of it they might think Cornes & Co. were trying to get hold of the direct trade. The only other firm in Yokohama which exported direct to Europe with which Cornes & Co. did business was Dent & Co. and this was arranged by Mr. Till, who said that if any objections were raised they could say they were supplying orders at Canton and did not know where the goods went. Cornes & Co. had been advertising for a raw silk inspector but could not find one. Mr. Dent was going to open an office in Yokohama to deal in raw silk, and Mr. Till had engaged him to inspect for the firm. Witness agreed to sell to Mr. Bremer if he engaged brokers. He frequently advised Mr. Bremer in his business and sometimes in his absence signed unimportant papers for him. He occupied the room at Fraser, Farley & Co.'s so that he could prepare codes for his own use. Cornes & Co. knew where he was and could send for him.

The case was adjourned to Tuesday.

TUESDAY, DECEMBER 8TH.

Mr. Le Prevost was again called and examined by the Judge: So far as I know there were very few employees of Cornes & Co. that moved into Fraser, Farley & Co. before I left. Nishida was the first to go before I left. I think the next was Okazawa, but I cannot remember. I cannot recollect others; there may have been minor men from the godown; they are engaged by the banto. Perhaps there were two of such. Among the orders brought out by Bremer from England were some for *Kobai Kaiki* silk. Business in these being troublesome I would prefer not to touch it. I suggested that he should see and speak to Nishida, who had a large experience of such silk when in Rosenthal's. There was a very large staff at Cornes & Co.'s. The Japanese weavers are bad at weaving colours, and orders being distributed in the country the result is a number of colours supposed to be the same. This often leads to trouble. As to Okazawa, Bremer told me he wanted a man in the office, and I recommended Okazawa, who was my assistant. After I left Cornes & Co., Ogura, Kuboki and may be two or three more, but I cannot remember their names, went to Fraser, Farley & Co. from Cornes & Co. (Ten names of Japanese were here read to the witness). I think it most likely those men went from Cornes & Co. to Fraser, Farley & Co. When I left the former firm they dismissed nearly all the men and these came to me and asked if I could find employment for them. When I was in Cornes & Co.'s Nishida engaged the godown men and Sawada the office men. We could not decide anything definite as to my relations with Fraser, Farley & Co. after I left Cornes & Co., because the action taken by the latter caused everything to be in suspense. I had proposed to start in business for myself and Bremer would come in as partner. Till that was fixed it was understood that I should inspect for Bremer and he pay me a commission on the business done. For some customers the commission was a half and for others one per cent. I rendered assistance to Bremer after he secured Fraser, Farley & Co.'s name in securing customers. There were Dent & Co., and Dunlop & Co. I may have written to others suggesting, but I think those were the only two obtained.

Did not Mollison & Co. and Kahn & Kahn become customers through your assistance?—I told Mr. Mollison that I had resigned from Cornes & Co., and that I intended to join Fraser, Farley. He asked what would happen to his orders. His orders were fancy goods, figured silk. He knew I was inspecting for Fraser, Farley & Co., and he was anxious about his orders and said he would send them for the present to Fraser, Farley & Co. I made no proposition to Mr. Mollison that he should give the orders, as I was connected with Fraser, Farley & Co. I made no hint of the nature of a proposition. I never approached Kahn and Kahn. I did not write to a single one of Cornes's customers. My writing to Dent was at Mr. Barmont's suggestion. As to Dent & Co. I told Mr. Barmont of that company about it. He told me that Mr. Dent had decided to live in London instead of in Canton, where the head

office had been, and he was anxious to start a silk business. I told him if I left Cornes & Co. I would be very glad to do business with him. About this time Mr. Bremer was much disappointed about the failure of his London business, and I told him I was writing to Dent & Co. making a proposition to secure their business. I think the conversation with Mr. Barmont took place in January, 1902, or even earlier. I did not write to Dent till later, when I told Bremer I would ask Dent to do business with Fraser, Farley & Co. But, of course, if I started in business for myself he was to turn over the customer to me. Formerly the business had been between Cornes & Co. and Dent's Yokohama office, but my idea was that we should do business jointly without the intervention of the Yokohama office. I believe I informed Mr. Barmont that I was inspecting for Fraser, Farley & Co., so that would be all right. He sent some orders before I left. I think I told him that Mr. Bremer would let me have the name of Fraser, Farley & Co. to form my new company. In February, I think, Mr. Barmont told me that he had received a telegram from Dent in London wishing Fraser, Farley & Co. to send offers. I told him I would see Mr. Bremer and tell him.

Did you supply or inspect in January or February for Fraser, Farley & Co.?—I did as Cornes & Co. I was Cornes & Co. to the end of July, if there was any business to be done. Dent & Co. knew that I was inspecting or supervising the inspection for Fraser, Farley & Co. when I wrote to them. Barmont was quite aware that Cornes & Co. supplied Fraser, Farley & Co. On account of their agreement with Kahn and Kahn, Cornes & Co., could not ship direct to Dent in London. When orders came from London to Canton or the Yokohama office and so to us we charged an inspection fee, but they, of course, also charged a commission. The course of business I proposed was to quote Dent selling prices. For instance we would quote yen 55, Dent would have to give his customer 2½ per cent. discount and would get 2½ per cent. on the money received from the customer—that would be the return commission. (Asked again.) My proposal was to quote selling prices in London to Dent, but naturally he could not do business for nothing and those selling prices would include a commission for him, as well as discount for the customers, and all the charges on the goods—Cornes's inspecting fee, packing charges, insurance, freight and telegraphic expenses. (At the request of the Court Mr. Le Prevost drew up a transaction showing the way in which the selling price was made up. The phrase "return commission" bothered the interpreter, and Mr. Le Prevost explained that it was the commission for doing the business.) All the silk buyers in London did business in that way. The customer did not buy except on condition of receiving a commission. Cornes & Co. had nothing to do with this matter, this was his proposal to Dent & Co. To his Counsel witness said he must have fixed the rate of commission when communicating with Dent & Co. Cornes & Co. had been doing business on a different footing. Dent had his fixed commission for doing the business. My proposal was quite different. (Mr. Kishi, one of the Counsel, took a hand at explaining the method of business described by the witness.) The return commission was fixed. I am speaking of return commission as referring to Fraser, Farley and Dent. Cornes received no return commission. They quoted a price including return commission. If a seller could make 2 per cent. profit he would make it, if only a half per cent. he would make it. Nominally it is fixed. If one buys on commission the commission is fixed. But where a firm telegraphs an order and you find that you cannot execute it at the figure, you may sacrifice part of your commission, and so, quoting yen 7.50 per 100 *monme* for goods that you have to pay yen 8 for, you may receive yen 8.20, and the 20 *sen* is your commission.

At this point the Court rose for tiffin.

The Court sat again at 2.25 p.m.

Mr. Le Prevost was recalled, and questioned by the Judge. He was told that the Court wished to know whether it would not be more

profitable for Cornes & Co. to deal with Dent & Co. direct either through its Yokohama office instead of through Fraser, Farley & Co. and he replied that Cornes never supplied goods directly. He was quite certain there would be trouble if Cornes & Co. dealt directly with Dent & Co. Dent buys from Fraser, Farley & Co.; not from Cornes.

Why did Dent come to buy from Fraser, Farley & Co.?—Mr. Dent can explain it.

Was it not because you strongly urged Dent to do so?—No.

If Mollison & Co., and Kahn & Kahn began buying from Fraser, Farley & Co., did they not stop buying from Cornes & Co.?—Mollison & Co. did, but I do not think Kahns did. It is quite likely that the latter continued to do business with Cornes & Co.

Did you ever ask Mollison, Dunlop, Kahn and Kahn to become customers of Fraser, Farley & Co.?—No.

While you were in charge of the silk department of Cornes & Co., you were manager?—Yes.

Do you think the books and records were kept straight as a merchant's books should be kept?—Yes.

From the books can you show from what place goods were bought or to whom they were sold?—No.

Is there any means outside the books by which this can be shown?—No. The books show what was bought and what was sold, but you cannot distinguish the price of each piece, as the goods are all the time mixed. As a bank buys yen at 2.0½ and 2.05½ but cannot distinguish the yen 2.0½ from the others so it is here.

The question is that you do not care whether you make gain or loss—is that so?—No. A merchant only buys when he thinks he can make a profit. He must always have stock.

The Court thinks the price at which we bought must be known?—The price is always known. The books show that.

Can you take a particular piece from the godown—can you tell the price and where bought?—No. We handle too many goods to show that from the books.

As a merchant do you not think that the price should be kept to be shown?—No. It would be too expensive. You could not make a living. In the same way the bank would have to keep a special staff to label each note. There is no need to do so. No merchant needs to do it. (Witness showed how he bought at different prices and how the average price was reduced by each sale at a profit.)

In this statement you imply that you knew the prices of the different stocks?—I could not go to the godown and say "this piece was yen 8 and this was yen 8.10 and this was yen 8.15." They are all mixed. I knew what I had bought and the prices I paid.

Is it not the custom to show in the stock book the amount that went out and the quantity that came in on the same page?—Yes, something of that sort. You enter opposite what was sold. One side would be "purchases" the other "sales." The quantity sold from a purchase should be entered opposite that purchase. I do not mean on the same line. You keep an account of what you purchase and you write opposite what you ship, but you cannot tell what particular part of the purchase that shipment consists of.

According to the examination of a certain party it seems there was considerable loss in Cornes & Co.'s silk department, such investigation ending in June, 1902?—(Counsel suggested that this was the report of an expert). The report of that expert is quite worthless.

Comparing the prices at which the goods were bought and the prices they were sold at what did they show?—A profit—that the selling prices were the higher.

Mr. Miller who investigated the books, says there was a loss of yen 60,750—the selling prices being lower. How is that?—That investigation is quite worthless. He should have ascertained at what price the stock was taken at last balancing, September, 1901; then he should have investigated the prices at which subsequent goods

were bought and he should have found against that the amount shipped and compared the two. (The Judge requested that his question should be answered directly).

Do you mean to say you do not recognize the fact that the selling prices were lower?—I do not; I deny it. If I could have Cornes & Co.'s invoice book I would show what I mean.

The expert figured this difference after examination of ledger, journal and stock-books, do you mean to deny that that difference of yen 60,750 arose?—I do. There was a difference in this way that our profits were not sufficient to pay our expenses. I must say, however, that is on the price at which I offered to take the stock over from Weale. If you have stock that you value at yen 250,000 and you are only offered yen 200,000 there is an apparent loss. Weale asked me to make an offer and I fixed a low price, the books will show very easily how much less the profits were than the expenses. You would have to have the ledger and the stock books. When I say very easily, it might take two or three hours.—(Mr. Kishi suggested that accused should estimate the difference by which the expense exceeded the profits, but witness said he could not possibly do so without reference to the books. Witness's attention was called to the 41 transactions alleged in the charge.) I imagine those transactions took place. Bremer, I understand, made them up from his books, I have no reason to think otherwise, but as I have not seen Cornes' books I do not know.

Do you admit that those goods were sent to Sawada and Yoshikawa?—I cannot possibly say. I knew we were selling to Mr. Bremer. I cannot say that these transactions were with Mr. Bremer.

How did Cornes receive payment?—I know in one or two cases, perhaps more, Mr. Bremer handed me his cheque. When he came first he used to bring his cheque and I would hand it to the cashier. Payment was supposed to be made promptly. I know that a large amount of payments came in to Cornes in July last year.

Were those delayed payments or the price of big sales?—There were some big sales in July, and these must have been the payments.

When payments were made to the silk department could they be kept there or handed to the main office?—There was no rule. It was often the case that we kept payments in the department. There was no rule as to my sending a large sum of money from the department. In July and August Mr. Weale said nothing to me about it, though I saw him several times.

The Court announced that the direct examination would be here concluded. Messrs. Owashi and Kishi addressed the Court with reference to the connection of Nishida with Le Prevost.

The Court enquired whether Nishida had ever asked Mr. Le Prevost for advice while the former was with Bremer.

Mr. Le Prevost—A few times in Mr. Bremer's absence he asked me about offers from Japanese merchants, but not as to foreign orders.

Through the Court (to his Counsel Mr. Kishi) Mr. Le Prevost said his first offer to Mr. Bremer was always market price and 2 per cent. Some transactions were only 1 per cent., but Bremer paid for the cases. Actual packing expenses are not quite one per cent., so when witness told Mr. Bremer he had better do the packing the latter would be able to save something. The inspecting fee was one per cent. He sold very much cheaper to Cornes' customers than he did to Fraser, Farley & Co. We always, he continued, sell for as much as we can get, that is the reason of the higher prices to Fraser, Farley & Co.

How could you sell so much higher to Fraser, Farley & Co.?—Because I quoted higher prices; there are opportunities like that. I did not say that I sold higher to Fraser, Farley & Co. I only said there were some transactions. It is quite likely that I may have sold at higher prices to Fraser, Farley & Co. than to others—and the other way about (witness produced a statement showing how he sold to Bremer and to other firms at different prices. He also gave instances showing at what prices he bought and sold to Fraser, Farley & Co. and others. One of these transactions showed a sale to Binning & Co.,

Rangoon, at yen 31.10, and the same day a sale to Fraser, Farley, & Co. at yen 32.64. He was buying in Yokohama at yen 29 and 30). There is no such thing as a date different from the date of the transaction being entered in the books of Cornes & Co. The preliminary court appears to have taken the date of settlement, but the goods were charged as soon as they left the godown. It is wrong to say that in item 24 the sale took place on June 10th and the entry was made on June 30th. In all cases the goods were charged as soon as they left the godown. About June or July last year I told the office men to bring up principally the stock book, invoice book, and purchase book. There seemed to be a loss on the business and I wanted to find it out for the period previous to June—from Oct. 1st in the previous September, 1901. Mr. Showler, of Cornes & Co. had balanced the books, and I had taken his figures as correct, but when I found this I went back another year to see if the mistake could be in that period.

I had not checked Mr. Showler's figures. I mean to say that I took these books to my house to find this out. The light is much better at my house than at the office; moreover I had always done that when I was book-keeper at Rosenthal's. There was no other significance attaching to this—of course not.

The defendant Sawada was also recalled at Mr. Kishi's request.

Mr. Bremer was recalled at Mr. Akiyama's request. He stated that he sustained loss on an order of Dent & Co. because of delay in shipping. He lost about yen 2,700. Dent bought the goods but there was some mistake about the telegram. I was under the impression, he said, that this order had been given by Dent & Co., Yokohama, but I did not know that Le Prevost had written to Dent & Co., Dent & Co., London, refused to take delivery and they were turned over at my request to Kahn & Kahn, who sold them for me, credited me with the proceeds and my loss was the difference. I could estimate my loss from July till I took over Fraser, Farley & Co.'s business. I estimated my loss at yen 20,000 to yen 25,000. My expenses were too great for my business, and I think I paid some cheques for which I received no goods. I might have the goods on the books, but I never received them. I can put in my account sales from Kahn and Kahn which will show my loss (at this stage Mr. Bremer produced the exchange settlement book of which he had spoken in his previous examination, and which had been sent back to him by the Court.)

The Court adjourned at 5.10 p.m. till the 10th, the Judge expressing the hope that they could meet at 9 a.m.

THURSDAY, DECEMBER 10TH.

In the Yokohama District Court, the trial of Mr. Alfred Le Prevost and Mr. Carl Bremer, and three Japanese who are alleged to be involved in the silk frauds—41 counts of which are set out—was resumed before Presiding Judge Watanabe, and two Associates and Public Procurator Nakamura on December 10th.

Mr. Akiyama and other lawyers employed by the defence were present as usual.

The Court sat at 10.20 a.m.

Mr. L. Prevost was recalled and examined by Mr. Kishi through the Court.

Towards the end of June last year did you pay to Cornes & Co. yen 15,000, Suspense account?—Yes under my agreement I was to have one third of the profits. I was allowed to draw for current expenses and had drawn, then, yen 13,000 and when the books were balanced I saw there would be no profits coming to me and I paid that over. The amount drawn was from the time I began to receive a third of the profits. I had drawn it gradually since October, 1901; my last drawing would be on June 30th, 1902. I paid back that money because I had no profits to share. The books were balanced on my offer to Weale, and taking the figures I had offered for the stock there were left no profits to divide. Cornes & Co. allowed me to draw money every month in anticipation of the profits I was expected to earn. I paid in yen 15,000 but what I had drawn

was between twelve and thirteen thousand yen. I cannot state the exact amount.

You had received yen 13,000 and you paid back yen 15,000—why this difference?—I simply wanted to be on the right side.

Did you have any idea that you had received more than yen 13,000?—No, not particularly. In dealing with Weale I was dealing with a peculiar man. It was the custom for the people in the office to purchase silk to make presents to friends. If I had bought a piece of silk in that way and it had been forgotten to be charged I was sure Weale was such a man as would prosecute me for it. I had no receipt from Cornes & Co. for the money I paid back; I may have a receipt from the cashier.

If you had received a receipt would it say what it was for?—It would simply say "refund of advances." Of course about this time I was a little reckless in paying such a large sum, but Weale had given me an offer of the stock; I was pleased at the prospect of getting Cornes' business and a thousand yen or so was a small matter.

This is contradictory of your care in being on the right side—is it not?—I was particular about my reputation and reckless about money, that is the only difference.

Did you make any suggestion that the cheques paid by Fraser, Farley & Co. at the end of July should be divided?—I advised Okazawa to split it up; it was too big a sum for one man to collect. There may have been fifty or sixty thousand yen; it was for goods we had sold a few days before. I simply said, "You had better split this up into different cheques." I was only giving him advice. It is quite likely that there might be different names on these cheques. I did not advise the use of any names, but each cheque was to bearer and so that would be immaterial.

The Judge proposed to dispense with the recital of the records as copies had been handed to defendants and translated so that the matters there might be assumed to be well understood by them. Had they any objections?

Mr. Bremer had none.

Mr. Le Prevost, however, wished to say that many points were omitted in the preliminary examination and he was quite sure that if the preliminary judge had gone into the case as carefully as it was being gone into here, the matter would have been acquitted. For instance, the preliminary judge asked whether he had made profits on transactions between Cornes & Co. and Fraser, Farley & Co., and asked specially about a transaction in which 10 per cent. profit was made. Witness's explanation was not entered on the record. He did not wish that record to be used against him. On his counsel pointing out that he could deal with the matters as they arose, Mr. Le Prevost said he had no objection.

In reply to the Judge, Mr. Bremer said he had not got translations but had left the matter to his lawyers and had no point to explain.

Mr. Le Prevost, asked if he had anything to say, replied that he had a great deal because of the preliminary court record. The preliminary judge examined him as to the declaration of Mr. Weale at the Ku Saibansho but when witness offered to produce letters showing the facts of his negotiations with Weale the judge said he did not wish to see them. Besides the method was so bad in the preliminary court. The judge asked a series of questions; the clerk did not take down the answers till the judge dictated to him what he remembered of them. In the case of Barmont and Mollison, there were similar things.

Could you explain particular points?—It would take so long,—yes.

There was some discussion here between Counsel and Judge as to various of the exhibits.

Mr. Kishi addressed the Court with reference to the negotiations between Cornes & Co. and Mr. Le Prevost.

Messrs. Bremer and Le Prevost were asked whether they had anything to say about the evidence as concerning the books, (over a hundred of which were in Court.)

Mr. Bremer had nothing to say except that he recognized his books as those handed into Court to prove his statements. Witness referred to his exchange book and the broker's note show-

ing how he got the rate of exchange on a transaction. Referred to the stock book of Fraser, Farley & Co. and asked about the method in which entries were made in it he said finally that he had not seen it for a year and could not speak without reference to the bookkeeper. He recognized the packer's book shown him. In addition to that, he said, there was a godown packing book. Okazawa, being called, said he knew nothing of the latter book.

Mr. Le Prevost was then given an opportunity of explaining some of the instances he had mentioned at the previous hearing where he sold to Fraser, Farley & Co. at rates higher than to others. He referred to the books of Cornes & Co. and showed entries to prove that he had sold to Greg, Canada, goods at a lower price than to Fraser, Farley & Co.—the price in the former case being yen 12.87 and in the latter yen 13.75.

The Court here rose for the tiffin.

The Court sat again at 2.20 p.m.

Mr. Le Prevost, who had been examining Cornes & Co.'s books when the Court rose, said he could not find Cornes' invoice books, which were rather important to prove what he had stated.

The Public Procurator said no such book was in Court, if it were its contents would have been made use of as showing the transactions between Cornes & Co., and Fraser, Farley & Co.

Witness said he was endeavouring to disprove Mr. Miller's statement that he sold at a loss. He wanted to show his Paris shipments to prove that he never sold at a loss. The book that he wanted would be called "Paris Equivalents" showing the yen equivalent against the c.f.i. price.

To Mr. Kishi, witness said after Mr. Bremer took Fraser, Farley & Co.'s business there was no Cornes & Co. invoice book as there had been before. Witness had denied Mr. Miller's statement and wanted the equivalents book to show the method in which business was done. (Here the Public Procurator undertook to telephone to Mr. H. Sato, legal representative of Cornes & Co., for the Paris equivalents book). He had showed the Court the sale to Greg and to Fraser, Farley & Co. at 12.87 and 13.75 respectively and he now wanted to show the Court the purchases at the same time. He said the previous day that there had been a purchase at 13.25, but he found afterwards that it was on Dec. 17th, at a later date. He made purchases at the end of November of 168 pieces at an average of 12.90 and of 119 pieces at 12.85. He also called attention to a purchase on June 30th of 5½ momme 154 pieces at 11.10 and said he sold these (pointing out the entries) to Fraser, Farley & Co. on July 2nd at 11.40. He had found during the tiffin adjournment a purchase by Cornes & Co. of 31 pieces of Kawamata "Y. B. D.," a special quality, at 11.10, which he sold to Fraser, Farley & Co. on July 18th at yen 12. At the previous hearing he had pointed to some other transactions and he now cited a shipment on Feb. 21st to Binning, Rangoon, Cornes & Co.'s own customer, of 50 pieces of 8 momme 36 at 31.10, case 35.10. The same day there was an entry showing a sale of the same material, 25 pieces, to Fraser, Farley & Co. at 32.64. This was recorded on the same page of the office stock book. He found in purchase book 12 a purchase of one piece between Feb. 13th and 18th at 29.18 and mentioned that the other day, but to day he had found out 4 more pieces at 30.14. That was the very best quality; the other at 29.18 was not of such good quality and there was consequently a reduction. On Feb. 21st he shipped to Binning 50 pieces of 8½ momme, 36, at 33.86 and on the same date sold to Fraser, Farley & Co. 50 pieces of the same goods at 34.68. Mr. Le Prevost cited other entries showing the prices at which he was buying certain goods and the greatly higher prices at which he sold to Fraser, Farley & Co. Asked if he had finished with the books, he said he wanted the ledger of the same time as the Paris books. Shown a translation of Mr. Miller's report in the preliminary court he perused this, which operation took up much time. (At this point an invoice book arrived containing the transactions between Cornes & Co. and Kahn & Kahn, and it was stated by the Procurator that no such book as "Paris Equivalents" was found to exist.

Mr. Le Prevost said there certainly was such a book, so the Public Procurator went off to telephone again and Mr. Le Prevost continued his reading of Mr. Miller's report, which his Counsel, Mr. Kishi, explained he now saw for the first time. Meantime by order of the Court a chair was brought to him). This, he said at the end, was a very long report, but page after page were on matters that he did not consider a man like Miller called in to audit books should have included. This must have been second hand information that he must have received from Kobayashi Beika. He mentioned the matter of witness attending the office of Fraser, Farley & Co. and attending to their business secretly. There were page after page on that and other matters, but not a single instance of his selling at a loss. It seemed to him that a man called in as an expert should have directed his attention to that point. He had said before that it was impossible to trace the cost of goods sold—that was, the cost of identical pieces sold—but of course that referred to certain dimensions, of which they might sell in a year 50,000 pieces. In the cases he had cited to the Court that day, 36 inch, it was very easy for him to trace, because in that case the total amount of purchases from Jan. 1st, 1902—he was illustrating this as a case where Mr. Miller could have traced—the purchases were only 42 pieces up to the end of March. Out of these goods he had given 100 pieces sold to Fraser, Farley & Co. so that it would be easy for Mr. Miller to trace, and he could have seen that witness was getting a far higher price from Fraser, Farley & Co. than from Binning. Then he wanted to disprove Miller's statement about the loss by showing on the Paris shipments that though there might seem to be a loss still when the transaction was analysed the contrary was the case. Part of the proceeds were carried to commission account, but what was carried to commission account was part of the price. He went on to show how Fraser, Farley's books differed from those of Cornes & Co. in the manner in which shipments were made and prices calculated. He took separate transactions to illustrate the difference, concluding with the contention that the yen 42,000 in Cornes & Co.'s commission account in the ledger was part of the price of the goods. The 1,800 pieces which he said were included too much in stock on Sept. 30th, 1901, would have cost on an average about yen 30,000, and therefore the yen 40,000 should have been carried to merchandise account. Miller said there was a difference in the merchandise account between prices paid and prices received, amounting to yen 60,000. But there was the yen 30,000 and also the yen 42,000 to be considered, when there would be a gross profit of yen 12,000. But the apparent loss on the goods department arose from the low price made—yen 34,000—for the stock. Some of these goods cost 10 per cent. more, but the market had dropped very suddenly on them so that what he offered for the goods was 5 per cent. less. There would be another yen 17,000. The gross profit, not charging salaries or rent, was thus yen 30,000. His object in referring to this was to show that instead of selling at a loss they were selling at a profit. Instead of having a loss of yen 60,000 as stated, there was an actual profit of yen 12,000 and there would have been more had he offered the full value of the stock. The mistake about the 1800 pieces was discovered in July. It could be proved by taking the stock at September 30, 1900, adding to it the purchases, deduct the sales and shipments and compare the result with the total of the inventory in September 1901. He found the mistake in July, 1902. He took the totals, as he could not go into individual entries. There were often at the end of the month a number of pieces the prices of which had not been fixed and these might have been included in the inventory. Miller ought to have found out the mistake easily. It was put to Mr. Le Prevost that Mr. Miller had found the mistake and had included it in the loss that he stated; he said no. Mr. Miller certainly should have done so. There was a splendid opportunity for him to make a bad showing against witness, the fact that part of the price had been put to commission account

making it easy, if he had a bad intention. If he had checked the invoice books he would have seen that part of the price was carried to commission account. It was dishonest of him to put down this yen of 60,000 loss when on the other side there was a sum of yen 40,000 to begin with.

Counsel (Mr. Kishi) endeavoured to induce the witness to confine himself to the point put by the Court that Mr. Miller must have discovered the loss of 1,800 pieces and included it in the total loss, but witness proved somewhat difficult of control. It was put to him that the 1,800 pieces shortage had nothing to do with Mr. Miller's statement, which was doubtless based on figures only, but he said he could not understand. Again the Court suggested that there was no reason to find fault with Mr. Miller's statement as the latter had nothing to do with pieces. Why did he dwell on that? Mr. Le Prevost rejoined that there could be no prices without goods and Miller should have seen that goods were received against the figures given. Mr. Miller must have ignored the commission. He had not found a single mistake in Mr. Sawada's figures. The commission account was kept separate because witness wished to see the difference between working on a basis of c. f. i. and on commission. Miller ought to have noticed that.

The Judge remarked that Miller could not have ignored the question of commission because in some parts he noticed it. Why should he have ignored the c. f. i. and commission matters?

Mr. Le Prevost said it must have been to make a worse showing, for otherwise he could not have shown the yen 60,000 loss.

Asked if he wished to say anything more about the books he said he thought not. He only wished to afford the Court every satisfaction.

Mr. Bremer was shown Mr. Miller's report and asked if he had anything to say about it. He replied that as it concerned only Mr. Le Prevost and Cornes & Co. it was no business of his and he did not care to read it.

Okazawa was called and explained the manner in which Fraser, Farley & Co.'s books were kept.

The Public Prosecutor then addressed the Court, producing the letter sent to Dent & Co. in London by Mr. Le Prevost dated Jan. 6th last year, and said he could not in view of that letter believe that the defendant had no relations with Fraser, Farley & Co. He described the difficulty he had experienced in getting the original of the letter, having at length to resort to the Court to succeed.

Shown this letter, Mr. Le Prevost said it bore out exactly what he had said to the Court. There was nothing for him to say about it. Shown some slips of paper he said one was in his writing but was not a signature; another bore his initials "A. Le P." As to the one that was next shown him he was at Fraser, Farley & Co. when some bank trust goods came in. The boy asked him to sign for them. He did so but the bank evidently looked up and not finding the signature sent for a facsimile, which he gave. He had often signed for Mollison & Co. "A. Le P." in the same way.

The Court rose at 6 p.m. to sit again Dec. 14th (Monday) at 9 p.m.

It is understood that the evidence is nearly complete, excepting any rebuttal testimony Mr. Le Prevost may have as to the Dent letter. Mr. Obata's resignation as interpreter was accepted, and Mr. Hattori will appear in that capacity from Monday, when the trial goes on again.

MENDELSON BROS. v. THE FUJI GOSHI KAISHA.

The hearing of this case was resumed in the Yokohama District Court before Judge Kato on Dec. 4th.

Defendants' counsel asked the Court to order plaintiffs to produce a letter referring to Exhibit B. No. 1 which states, in the beginning, "received your to-day's letter" etc. The letter referred to gives the details of a promise to the effect that defendants had accepted curios from plaintiffs at a discount of 10 per cent. and Mr. Hirano, one of the partners of the Japanese firm, was to bear a rebate of 15 per cent, which was to be paid to the sellers of the goods. Counsel added that the production of the evidence was in the

interests of plaintiffs, and also an obligation under Art. 336 of the Law of Civil Procedure.

Plaintiffs' counsel argued that there was no necessity to produce any private letter in Court in the present state of the case.

The Court rejected the request of defendants and declared that the hearing was completed. Judgement is to be given on Dec. 7th.

The hearing of this case, in which plaintiffs' claim for merchandise supplied to defendants, a portion of which amount is still unpaid after a promise to pay in installments had been made, was resumed in the Yokohama District Court before Judge Kato on Dec. 7th, when judgement was delivered ordering defendants to pay yen 1,264.99 with interest from April 2nd, 1903, to the execution of payment at the rate of 5 per cent per annum, and costs, and the Court informed plaintiffs that they may temporarily seize property of defendants to maintain their rights.

AN INSURANCE CLAIM.

The hearing of the claim made by Ah Teck against the Northern Insurance Company came on in the Yokohama District Court on December 8th.

Mr. H. C. Pigott, being examined as a witness, stated that the Chinaman made an insurance contract with the company concerned about October, 1901, covering property stored in the godowns on lots No. 34 and No. 35, marked E and F respectively. These godowns were destroyed by fire at the end of October, 1901. Cross-examined, witness said that the Chinaman had been in the employ of Messrs. Mourilyan, Heimann and Co. for six years, and had always been regarded as a reliable man.

Mr. J. W. Hall being examined said he knew a fire occurred on October 31st, 1901, at the godowns on the premises of No. 35, and he subsequently, at the request of the insurance company, went to the spot to examine the debris; afterwards selling the same by auction.

Chien, a Chinese employed by Messrs. Ahrens and Co., deposed that the godown marked E contained much clothing and personal property.

The case was adjourned till December 15th at 9 a.m.

CLAIM FOR BUSINESS BOOKS.

In the Yokohama District Court, the hearing of this case in which Mr. Max Isaacs and Messrs. S. Isaacs and Co. petition for the return of mercantile books which are in custody of Mr. Marcus Isaacs, was resumed on Dec. 8th.

Mr. Masujima, counsel for Mr. S. Isaacs, asked the Court to appoint Mr. Ideura, counsel for defendant as a delegate to examine the books and then to send them over to New York.

Plaintiff's counsel contended that the books must not be handed over to another because there is anxiety with reference to alleged false entries which had already been made.

Defendants' counsel started that the power of attorney given to Mr. Max Isaacs was not made in accordance with Japanese law, and the latter had no right to appear in the Court as counsel.

Mr. Sawada, Counsel for Mr. Max Isaacs, showed the Court a document which Mr. R. Isaacs gave Mr. Max Isaacs, to the effect that the instruction was properly made, and asked the Court for an interlocutory judgement on the point disputed. The Court adjourned till Dec. 15th.

It may be remembered that Mr. S. Isaacs petitioned for the return of the books in dispute and Mr. Max Isaacs appeared as intervenor. The intervenor now appeared as plaintiff petitioning for the return of the books to himself but not to Mr. S. Isaacs.

CUSTOMS DECISION.

Mr. H. Minakami, Director of the Yokohama Customs, delivered on Dec. 2nd a decision on a protest filed by Messrs. Cornes and Company, No. 50, Yokohama. The firm imported 167 bales of printing paper in two shipments—82 and 85 bales—out of which 82 bales had a certificate of origin. The appraisers imposed duty in accordance with No. 46, A-2 of the conven-

tional tariff between Japan and Germany, and on the remnant which were without a certificate of origin, imposed duty under No. 292 of the general statutory tariff. The importers contended that the article in dispute was not printing paper but packing or writing paper, and requested that duty should be levied under another provision of the tariff.

The protest was rejected on the ground that the nature of the paper was recognized to be for printing and not of the quality the importers alleged.

DESULTORY NOTES ON SPORT.

The writer of the Turf columns in *Land and Water*, commenting on the not altogether successful attempts of the Jockey Club to improve the Gray starting gate by an attachment releasing the barrier by electricity, bewails the persistence with which the Stewards cling to a poor type of machine. He says, "It is a pity that the Club do not get a proper gate, for both the French gate and the Irish never miscarry, though our Gray does far too often." It is indeed a pity that the home authorities allow the march of progress to be impeded by a stubborn determination to make a success of a gate which has been tried, found wanting and discarded by the authorities at other big racing centres in favour of better inventions. Even the best of starting gates, working faultlessly, has to meet with a great deal of opposition from owners, trainers, jockeys and public, wherever introduced, until such opposition, which is mostly born of ignorant prejudice, is overcome by experience of the practical working of the machine, and in a very short time changed into partisanship.

Grey Tick, the winner of the Caesarewitch, was originally bought by the owner, Mr. Bass, to lead the famous Sceptre in her gallops. Grey Tick started at the remunerative odds of 20 to 1, in a field of 28 runners. It is said that the race was probably won by the trainer, Alec Taylor, who took away the whip from the rider, an apprentice, as the horse was going out to the start. Morny Cannon, on Zinfandel, was only beaten 3/4 of a length after a hard set to at the finish, and if the apprentice had had a whip, it is Lombard Street to a China orange he would have got it out and stopped his horse.

Mr. Bass is thought to stand a fair chance of winning the Viceroy's Cup in Calcutta this year with Carabine, a recent importation from England, by Carbine out of Saintfield.

Major Loder's filly, Pretty Polly, winning the Middle Park Plate in a canter, stands out the best of the two year olds, and is at the top of the Free Handicap for two year olds, giving no less than 7 lbs to the best of the colts. Pretty Polly is unfortunately not entered for the Derby, or she would in all probability follow the example of Eleanor and Blinkbonny, and win both Derby and Oaks, as was done by these two fillies in 1801 and 1857. Since its institution in 1780, the Derby has only been thrice won by a filly. The last was Shotover, belonging to the late Duke of Westminster. She won in 1882, ridden by Tom Cannon.

Sir Thomas Lipton's offer of a 500 guinea Challenge Cup, to be raced for annually from Sandy Hook to the Needles, does not seem to have met with the enthusiastic approval that at first sight might be expected. The conditions suggested by Sir Thomas, doing away with all restrictions altogether, instead of encouraging a return to a healthy type of ocean going yacht, are considered more likely to produce immense racing machines, that is, if men could be found willing to compete over such a course for a Cup not to be won outright. Possibly, however, the invidious comparisons recently made by Sir Thomas between British and American yacht designers, may have influenced British yachtsmen in their consideration of his offer, which was doubtless made in true sporting spirit.

The law case recently brought before Mr.

Justice Walton in the High Court has attracted considerable interest amongst yachtsmen at home. The plaintiff, Mr. Kerry, of the Royal Temple Yacht Club, sued a Lloyd's underwriter to recover money due under an insurance policy effected on his yacht, the well-known schooner *Ariadne*. The ship was wrecked on the east coast of New Zealand, as long ago as March, 1901, and not the least interesting part of the narrative was the description by the plaintiff of the manner in which he had been "hounded down," to use his own phrase, by Lloyd's representatives all over the world, from the time of the disaster until the opening of the case. The defendant alleged that the policy was void, because the plaintiff concealed the fact that he had paid only 200s. for the yacht, when he insured it for £20,000, and also that the *Ariadne* was wilfully wrecked, both of which allegations Mr. Kerry entirely repudiated. After occupying the Court three days, the case suddenly collapsed, owing to the defendant's counsel announcing that the underwriters had ascertained from an unquestionable source that the information they had relied on to support their charges was mistaken and inaccurate. The verdict and judgment therefore was entered for the plaintiff for an agreed amount.

The fleet of the Yokohama Yacht Club has been further diminished by the shipping of the *Haidee* to Hongkong by the *Bingo Maru*. Her owner, Mr. Henry Keswick, made some tentative efforts to sell the *Haidee* here, but as no buyer was speedily forthcoming, he decided to keep her, and will doubtless enjoy some good sailing in her in Hongkong waters, where she will be a handsome addition to the local fleet of cruisers. In Hongkong they race with small boats only, much about the size of our 21 raters.

With the *Golden Hind* wrecked, and the *Haidee* departed for other climes, the Yokohama Yacht Club 39 rater class has a poor outlook for next season.

REVIEW.

Japan. Its History, Arts and Literature. By Captain F. BRINKLEY. 8 vols. J. B. Millet Company. Boston and Tokyo.

(CONTINUED FROM NOV. 28TH.)

On p. 197 of this volume as well as on p. 87 of vol. III, Captain Brinkley speaks of Hideyoshi as having been defeated in battle by Ieyasu. This is a mistake. The two generals never actually joined battle, though they were in arms cautiously watching each other for about 12 months during what is called the Komaki war. At the beginning of that war an incident occurred which by a few writers has been exaggerated into a defeat of Hideyoshi's arms by Ieyasu. Among Hideyoshi's generals there were two men called Ikeda Nobutera and Mori Nagayoshi who were noted at the time for their headstrong ways. They asked Hideyoshi for permission to make a night raid on Mikawa. They were granted leave to do this, but with strict injunctions to confine their attack to the borders of Ieyasu's dominions and on no consideration to be tempted by temporary success to proceed far into the enemy's territory. They disobeyed orders and were both slain. On hearing what had happened Hideyoshi at the head of 20,000 picked men hastened to Nagakute, the place where his generals had been surrounded by superior forces and slain, only to find that Ieyasu had rapidly retreated in expectation of Hideyoshi's arrival. Hideyoshi followed him up, but Ieyasu was not to be induced to give battle to a general whom he recognized to be his superior on the battle-field. The night after Ieyasu's triumph over Hideyoshi's rash generals, his chief retainers begged to be allowed to attack Hideyoshi. But Ieyasu replied to them:—"Let us be content with one victory. If we try to take advantage of it and proceed further there is no saying what may happen to us; for as a warrior Hideyoshi has no equal." Hideyoshi's main force never took the field against Ieyasu. The incident referred to above was a comparatively trivial one, much as it annoyed Hideyoshi at the time, who was prepared in

very short time to turn the disaster into a victory had Ieyasu stood his ground. But the wary retreat of the Tokugawa leader and his subsequent attitude convinced the *Taiko* that Ieyasu was an enemy to be conciliated rather than crushed and led to his making a lasting peace with a man who for a series of years had fought in alliance with Oda Nobunaga, Hideyoshi's deceased master. Captain Brinkley writes of Hideyoshi's favourite concubine under the title of the lady Yodo. She is always spoken of by the Japanese as Yodogimi and Yodogimi or Yododono has now become a proper name and is used as such by Japanese teachers of history, so that the lady Yodo seems hardly allowable. I have consulted several scholars on this point and they are agreed that to translate Kimi in any such way is not allowable, Yodogimi having been converted into a regular personal name. But this is a very minor point. I am glad to see that Captain Brinkley draws attention to the many weak places in the Bushido system of morals. The "Soul of Japan," though excellent in some respects, lacks balance and would be greatly improved by the subjection of the whole code which it describes to keener criticism than Dr. Nitobe has applied to it. The "Soul of Japan" is decidedly a very one-sided account of the "Warrior's Way" as it does not show up any of the evils that mingled with the many noble actions performed in the name of honour and loyalty. Captain Brinkley most accurately describes the way in which in the palmy days of the Bushido loyalty went mad and warriors of high reputation considered it their duty to act in the most cruel manner to relations and friends in order to show their attachment to their masters or chiefs. These pages make sad reading. They are designed to illustrate the fact that "the ties of consanguinity snapped easily in medieval Japan when subjected to the strain of ambition or loyalty. The much-praised old warrior of these times was, we are told, often brutally cruel to his kith and kin. Fathers kill their own children and innocent women and young children are butchered by the orders of men who profess to be actuated by high-class moral aims. The *bushi* we are informed yielded in a most slavish manner to erotic passion. . . . In the camp, where the presence of women was generally impossible, he thought no shame of resorting to unnatural liaisons, and out of that indulgence there grew a perverted code of morality which surrounded such acts with a halo of martial manliness. . . . In vain the student looks among the heroes of the Military epoch for a man who made purity an ideal, continence a duty, or conjugal fidelity a law."

It is quite impossible to give in this review any adequate notion of the variety of subjects treated under the general headings which have been transcribed above. The chapters on Manners and Customs and on Refinements and Pastimes are full of interest to the student. A most exhaustive account of the numerous ideas and customs connected with the observance of *Changyu* ceremonies will be found in the last chapter of this volume. Much of the information furnished here has as far as I am aware never been given to the foreign public before. The account of this quaint and unique pastime covers nearly 30 pages of Captain Brinkley's work and conveys an adequate notion of the complexity and subtlety of the cult which bears the simple title of "Hot-Water-for-Tea."

The first two Chapters of Vol. III are on still more refinements and pastimes of the Military Epoch. First the *Ko-awase* is described, which Captain Brinkley tells us has evoked only ridicule from the few foreign writers who have made any reference to it. Then comes an account of flower arrangement based on Mr. Conder's exhaustive essay on this subject. "Foot-ball merits special notice, for it attained extraordinary vogue," the author informs us. From foot-ball he passes on to describe the performances of the *Brua-boru* and *Joruri* chanting. The remaining chapters of this volume are occupied with a minute account of the Tokugawa times. By far the most important event of this era was the attitude of the Tokugawa Shoguns to Western powers. Captain Brinkley is of opinion that the action of the Jesuit missionaries was largely responsible for the

remarkable change in Japan's foreign policy which was inaugurated by Hideyoshi and still further developed by the early Tokugawa Shoguns—a change which involved the closing of the country to all Occidentals excepting the Dutch, who were allowed to trade only on the condition of slavish subjection to the most irksome and oppressive restrictions, while occupying their island prison at Deshima. Captain Brinkley refuses to credit what Jesuit missionaries have written about Hideyoshi. "The annals of the Jesuits," he says, "ascribe to the meanest and paltriest motives the animosity that the *Taiko* ultimately displayed towards their faith. It is impossible to accept their evidently prejudiced verdict." Captain Brinkley then proceeds to show how unwisely and even defiantly the Jesuits acted towards Japanese Government authorities, how they stirred to strife or encouraged it in various ways until they convinced Hideyoshi and the Tokugawa chieftains that their presence in the country constituted a serious danger to the State. Expulsion and bitter persecution followed as a natural course. The Buddhists had suffered in a somewhat similar manner when they threatened the supremacy of the men in power. Captain Brinkley, after describing at considerable length the altered feeling of the Japanese people towards Western nations which marked the opening of the seventeenth century, says, "However welcome the admission, it is apparent that for all these changes Christianity was responsible. The policy of seclusion adopted by Japan in the early part of the seventeenth century and resolutely pursued until the middle of the nineteenth century was anti-Christian, not anti-foreign. The fact cannot be too clearly recognised. It is the chief lesson taught by the events outlined above." In the closing pages of this volume Captain Brinkley points out that Japan is committed to Occidental ways and has ceased to be an Oriental nation in the ordinary sense of that term. "Her aspirations, her modes of thought, her impulses, her ideals, and her tests of conduct must now be changed, not altogether indeed but certainly in the main, as Occidental. She may be regarded as a Western nation situated on the confines of the Far East, a nation now, for the second time in its history, giving free play to the instincts of progress, of enterprise, and of daring which, conspicuously displayed three centuries ago, were thereafter paralysed by causes for which the Christian Occident, not the pagan Orient was primarily responsible." Vol. IV. opens with a chapter on "Manners and Customs of the Tokugawa Era." The next chapter describes the Tokugawa Court in a very interesting manner. There follow chapters on "Criminal Procedure and the Criminal Classes in Tokugawa Times;" on "Personal Liberty, Justice, Slavery and Checks on Vice;" on "Philosophy, Education, Customs and Customs," and on "The Meiji Era." The author draws attention to the fact that one of the most marked features of the Tokugawa age was the progress which took place in the middle and middle-lower classes at that time, which classes began now to take an interest in literature and in art. The most interesting chapter in this volume I take to be that on the Tokugawa Court. The reader is allowed to enter the innermost chambers of the Shogun and see things as they were for over 200 years. One is quite astonished at the number of women who always surrounded the Tokugawa chieftain. They were all spoken of as *O-oku no jochu* (dames of the honorable interior). "An equal number—yet—constituted the establishment of the Shogun himself and that of his wife (*Midaidokoro*); so that the total was six hundred and ten, but the names actually borne on the roll generally exceeded that aggregate." Into the various divisions of the court ladies and their rights and the Shogun's rights in reference to them I have no space here to enter. The Shogun had attached to his household eight "Middle Dames (*O-chiara*)" with whom his relations might be of the closest character, but besides these there were others connected with his own and his wife's household which were liable to be called on to act as his concubines. The girls attached to his wife's household had the right of refusal to enter into such a relationship, and "several instances of refusal are on record."

There is much curious information in this chapter which is quite new to the foreign reading public. On pp. 41-45 the daily routine through which the Shōgun went is minutely described.

In Chap. IV. of this volume, on pp. 106-110 will be found a very valuable analysis of certain well known Japanese mental characteristics and a discussion of their origin. The author in this chapter is describing the old methods of administering law and in connection with this, he says "The Japanese people learned to pay little attention to abstract theories, and to set much store by considerations which an Anglo-Saxon jurist would reject as emotional. They took for guide the sentiment of right, not its science, and moral duty assumed in their eyes altruistic extensions that trench upon the confines of romance. Educated to anticipate compromise as the issue of every dispute, they carried the spirit of concession into all controversies, and thus neither in the story of the individual nor in the history of the nation can the student find many examples of that fiercely implacable assertiveness which conviction begets in an Occidental It is scarcely to be questioned that the emotional fires kindled by religious polemics in every age of Europe's civilised existence had some part in welding the mind of the average Occidental to its present implacable tenacity of opinion. But Buddhism never served such a purpose. Its tendency was rather to inspire deference to the views of others and to deprecate sectarian strife. Perhaps no mood could have been more serviceable to the Japanese in their modern career.* The Japanese themselves ascribe their love of compromise and conciliation largely to the code of social courtesy. It is a breach of politeness to be self-assertive; to thrust one's own rights into the sphere of a neighbour's; to disturb the graceful placidity of life by egoistic claims of any kind, or to obtrude distressful subjects upon the attention of others. . . . while for the gentleman or the lady trained in the precepts of the *samurai's* creed, all displays of egotistical emotion are contemptible."

In the concluding chapter of Vol. IV. the author draws attention to the uniqueness of some of the events which marked the early years of the Meiji era, such as the voluntary surrender of their sieges by the most powerful clan chieftains and the bloodless disarmament of the hitherto haughty and headstrong military class, and the introduction of parliamentary institutions among a people who had received no special preparation for living under them. On the last subject Captain Brinkley observes that Japan has been engaged in experimenting without even yet arriving at any very stable or very satisfactory form of government. "Government by the united 'Clan Statesmen' independently of political parties has been tried; government by the 'Clan Statesmen' in coalition with a party has been tried; government by the combined parties independent of the 'Clan Statesmen' has been tried; government by a party in combination with a section of the 'Clan Statesmen' has been tried; and government by a section of the 'Clan Statesmen' independently of the other section as well as of political parties is being tried at the moment of writing this history. The variations may be said to have been exhausted." Captain Brinkley goes on to comment on the corruption attending the present form of government. "Members of the Diet sold their votes to the Government and their influence to promoters of speculative undertakings, and society in general descended to a lower moral plane." On pp. 213, 214 Captain Brinkley calls attention to the striking fact that the Satsuma rebellion, which lasted from January 29th, 1877, to September 24th, during which time no less than 66,000 men were fighting on the Government side and 40,000 on the side of the rebels, was put down by an army of commoners, thus contributing immensely towards the dissipation of the notion

that the industrial, trade and agricultural classes were deficient in all military qualities.

Vol. V. is full of most valuable information, succinctly stated, on the following topics:—"Financial and Economic Conditions; Japan's Foreign Politics; Steps of Progress; Creed and Caste; Religion and Rites; and Superstitions." In the first chapter beginning from p. 7 the new financial policy of the Government, inaugurated in 1881 is explained. This consisted of the reduction of the volume of fiduciary notes in circulation and in an accumulation of a specie reserve. The nation, we are told on p. 20, is by no means overtaxed, paying relatively less money to the Government than it did ten years ago. A table stating approximately the various items of the estimated wealth of Japan is given on p. 21. The number of persons, we are told later on, possessing property valued at £50,000 and upwards does not exceed 441, that is, one owner of this amount for every 100,000 inhabitants; whereas in the United States there are 3,828 persons who possess at least £200,000, that is, one for every 20,000 inhabitants. In the chapter on Japan's Foreign Politics, on pp. 72, 73, Captain Brinkley draws attention to European partiality in the discussion of cruelties perpetrated in war time. Europe and America "had been thrown into a tumult of palpitating horror when Japanese soldiers, remembering their tortured and mutilated comrades forgot for a moment to show mercy to a savage enemy; but when the troops of great Occidental States (Russians and Germans) deliberately resorted to medieval fashions of warfare, a feeble remonstrance, followed by discreet silence was the measure of public condemnation. There could be no mistaking the import of this contrast: 'One law for me, another for thee' was to be the governing principle of the Occident's attitude towards Japan." In the chapter on "Steps of Progress" there is occasionally to be found matter which does not answer to the title of the chapter. A great deal of what is said on the defects of Japanese journalism might well be classified under "Obstacles to Progress," but is certainly not conducive to progress. On p. 92 attention is called to the unruddied equanimity with which a Japanese puts up with nuisances of all sorts that in the West would rouse a storm of protest and agitation. "Nuisances of every description, obtrusive, noisy, or noisome, are endured without open protest. The fact is that courtesy and philosophy combine to dictate a show of indifference. A Japanese finds it abhorrently rude to take querulous notice of a neighbour's habits or idiosyncrasies, whatever discomfort or inconvenience they may cause himself, and no character seems to him less respectable than that of a fussy, sensitive person. Men guided by such rules of conduct do not make vehement exponents of public opinion, however agreeable they may be as units of society."

Captain Brinkley being one of the most careful and painstaking of writers, it is most rare to find anything savouring of solecism in what comes from his pen, but in the chapter on Creed and Caste, p. 115, the following sentence occurs:—"Here again the reader, if he pleases, can find in the Occident parallel examples of defiant faith based on an equally small grain of mustard seed." This is surely an unallowable mixing up of figures, the term "based" leading one to expect slender foundation or some such expression, but not the mustard seed figure, which of course comes from the Bible and is used there to show into how great a thing a small living thing may grow, and not to indicate that a gigantic edifice may rest on a diminutive foundation. The idea of the law of growth and the idea of architectural proportions between different parts of a building are two distinct ideas which in this passage have been, it seems to me, wrongly mixed together. Into the author's most interesting remarks on the position assigned to woman by the Shintō creed I have no space to go. This is a distinctive mark of Shintō as compared to other Oriental cults or creeds. Discussing Japanese religion generally and the opinions of the Japanese on religious topics, Captain Brinkley reaches the same conclusion as was many years ago reached by Satow, Aston, Chamberlain and many other scholars. He tells us that the

educated section of the nation has persistently and most resolutely rejected supernaturalism, while maintaining a code of morality no whit inferior taken as a whole to that followed by Christians. On this subject Captain Brinkley writes in a most decided manner and to the present writer it seems that he is quite justified in expressing himself as he does. That an extremely high state of moral attainment should be maintained from age to age without relying in any way on a belief in miracles of any kind, though deemed an impossibility by many bigoted and ill-informed Western writers, is in the case of the Japanese a fact not admitting of any doubt whatever. The gist of Captain Brinkley's many pages on Japanese religious belief is that it is not serious at all, that it is either veiled or unveiled scepticism; that the Japanese are a nation of agnostics. I will quote a few passages only in proof of these assertions:—

"Religion does not overshadow the daily life of the Japanese. The gloomy fanatic is unknown. Confessions of sin, repentance in sackcloth and ashes, solemn and protracted acts of worship, the terrors of an eternity of torture,—these things enter scarcely at all into the layman's existence. . . . Japanese religion is all essentially practical and easy-going. . . . Buddhism, Japanese Buddhism, can never produce a Puritan or a Covenanter. It weaves no thread of solemnity or sanctimoniousness into the pattern of every-day life. Its world of hungry demons and infernal beings are too unsubstantial, too remote to throw any lurid glare over the present. The festival, indeed, may be called the popular form of worship in Japan. . . . It is a species of gala for the huge multitude that attends it." The Ikegami Niishiren festival is then described. The narrative continues thus:—"Here as everywhere in Japan, the practical sincerity of the national character shows itself. Even at a religious festival, no effort to dissimulate the traits of which humanity can never divest itself is encouraged or expected. The great majority of the people come for the sake of the outing as much as to pay respect to the memory of the saint. Let them, then, enjoy themselves. Religion does not prescribe austerity of manners or asceticism of life. The Buddhas are not shocked because a monkey turns summer-saults under the eaves of their sanctuaries, or a rope-dancer balances in the shadow of their shrines. . . . So the praying goes on, and the rattling of *cash* against the bars of the money-chest, and the burning of incense, and the chattering of monkeys, and the shouting of showmen, and the perpetual rippling of laughter and the babble of cheery talk, as the great, good-humoured multitude flows to and fro, not a bit nearer to hell or farther from heaven because its units have studied no hypocritical mien of sanctimoniousness, nor been trained to deceive their deity by putting a veneer of puritanism over the instincts which he has implanted in their breasts." The author next endeavours to show that in accepting Buddhism, Japanese scholars have quietly ignored its supernaturalism. "Proficiency in Buddhism was synonymous with proficiency in the Chinese language; with possession of the key to all the stores of the Middle Kingdom's learning." Yet this did not lead to a belief in Buddhist supernaturalism. "There are plain indications that the supernatural beliefs of Buddhist teachers gradually became the object of open or covert ridicule among the learned, and were ultimately relegated to much the same place in the minds of educated men as ghost stories occupy in European or American thought to-day. In short, religion, as distinguished from morality, came to be quietly ignored." Of Confucianism and its reception in this country, Captain Brinkley says:—"But through fourteen centuries it worked steadily and powerfully to turn the mind of educated Japan from transcendental subtleties and religious mysticism to a conviction that the only true and rational creed is one which subjects the human faculties to no excessive strain, nor asks men to accept, on the alleged authority of supernatural revelation propositions lying wholly beyond the range of mortal intelligence. Buddhism, in the comparatively bright and comfortable garments with which Japanese genius

* Spence Hardy, in his excellent book on *Eastern Monachism*, praises the extraordinary tolerance of the Buddhists, and adds his assurance that the annals of Buddhism will furnish fewer instances of religious persecution than those of any other religion. (REVIEWER.)

clothed it, is the faith of the masses, but the scholar proposes to himself a simpler creed, an essentially work-a-day system of ethics. To be moral, honest, and upright; to be guided by reason and not by passion; to be faithful to friends and benefactors; to abstain from meanness and selfishness in all forms; to be prepared to sacrifice everything to country and king,—that is the ideal of the cultured mind, and in the pursuit of it no priestly guidance is considered necessary." After describing a Buddhist religious service, the author continues:—"The Buddhist services appeal only to a narrow range of emotions and leave the intellect untouched. The adult Japanese takes little interest in them. To be a frequent temple-goer out of season is to be regarded by one's neighbours as uncanny, unpractical, and probably unfortunate." All this taken in connection with the entire rejection of Christian supernaturalism by a large section of professing Christians belonging to various Christian bodies is very instructive. The tendency of all thinking Japanese is to reject supernaturalism and it is as strong in the 36th year of *Meiji* as it was a thousand years ago. That is an extremely significant and incontrovertible fact. If in giving an account of Buddhism Captain Brinkley has omitted to dwell at any great length on the extreme pessimism that characterizes its teaching, it is probably because he sees abundant evidences in the lives lived by the Japanese and in their writings that this pessimism has exercised no baneful influence in these sunny isles, whatever it have made done elsewhere. The Japanese people are essentially light-hearted. Smiles greet one everywhere. By some Occidentals optimism is said to be the result of Christian teaching. With a Japanese it is part of his original nature. He lives and dies with a light heart.

Vol. VI., in addition to describing festivals observances and pastimes furnishes us with a lengthy and very valuable history of Japanese Commerce. In various parts of Captain Brinkley's 8 volumes on Japan there will be found remarks bearing on the attitude of the normal foreign mind to Japanese customs and ways, and it is often taken for granted that failure to appreciate and admire on the part of an Occidental is the result of ignorance or bigotry. But this is by no means the case in a good many instances. Why not account for it by saying that in many cases it springs from inherent, ineradicable difference of taste? Chap. III. in this volume opens with the remark: "It is probable that very few foreigners ever learn to appreciate Japanese dancing. One reason for their want of sympathy is that they approach the study with prejudiced minds." In some instances there may be blind, ignorant prejudice, but in other cases, with the greatest patience in studying the Japanese point of view, and even after taking the trouble to master a number of historical details connected with Japanese performances, not a few very scholarly foreigners are of opinion that many Japanese pastimes are inexpressibly tedious and can never afford real pleasure to any ordinary intelligent Occidental mind. In order to write about such subjects, or for the sake of scholarship, Europeans will be found who will go minutely into Japanese observances and pastimes, but there is no denying that most Occidentals are bored by them to an almost indescribable degree. The present writer belongs to this class. Many years ago we were told by a few enthusiasts that we were barbarians for not appreciating Japanese music, that we only needed the sympathetic ear and that then 3 hours in a Japanese concert room would be turned into a paradise, and so on. Most of us smiled and kept away from such performances most religiously. There is a tinge of unnecessary bitterness and narrowness of view displayed in certain remarks made by Captain Brinkley bearing on the state of foreign opinion on such subjects. *Tot homines, quot sententia.*

On pp. 90, 94, the system of licensed prostitution practised in this country is described. The author says the Japanese view of prostitution is that of continental Europe, they license it, but they go further than Europe and ostracise prostitutes so successfully that with the exception of

a very small area reserved for brothels their towns are free from any evidence of evil. The question is not fully discussed, but the author inclines to the view that the Japanese have adopted the less of two evils; that finding it impossible to stop prostitution owing to the "natural force of certain appetites," they decided to accept the fact and to subject its consequences to official control.

Commenting on weights and measures, on p. 128, Captain Brinkley says, "But the Japanese never showed any intelligent originality in such matters. They were either primitive or imitative." Might not this remark be applied to many other provinces of Japanese life and industry? On p. 137 allusion is made to the interesting fact that, contrary to what happens in most countries, in Japan living is cheaper in modern days than it was in olden times. "A day's work procures from five to six days' sustenance now, whereas formerly it only produced one day's sustenance at most. The practice of selling human beings prevailed in Japan, as in Europe, for a very long time. "Among the saleable chattels in the early times servants were included" says Captain Brinkley, on p. 39 of vol. VI. About a hundred years ago only an Englishman's wife, after being exposed for sale with a halter around her neck, was bought in London for 2s. 6d. Allusion to it will be found in *The Times* published at the time of its occurrence. What the author has to say of the system of credit in vogue in olden times deserves the attention of modern business men, who seem to be of opinion that Japan has never practised a system of credit. "Throughout more than two hundred years under the Tokugawa rule all business was conducted on a basis of credit more extended and more thorough than could have been found in any other country at the same epoch, and commercial paper as well as private bank-notes commanded implicit confidence. There is no question of conjecture or credulity in this matter: the facts are beyond cavil." At the close of Vol. VI. the author draws attention to the fact that in the cotton spinning industry Japanese mills have secured greater successes than the Indian mills, despite the cheap Indian labour. We are told in a note that the "Japanese mills are kept at work twenty-three out of the twenty-four hours, with one shift of operatives, and that their production per spindle is forty per cent. greater than the production of Bombay mills and nearly double of the production of English mills." But the author concludes his review of Japanese commerce with the remark that, though great manufacturing successes lie before Japan, she will from one cause or another take many years to realize them.

Volume VI. closes with Appendices of various kinds and a General Index. First come the notes referred to in the body of the work. Then a list of the Emperors and Empresses of Japan, the dates of their reigns and their relation to previous rulers. Then comes a list of the Shōguns arranged in the same way. Then follows a table of dates beginning with Jimmu's accession—legendary—660 B.C., followed by Jingo's invasion of Korea 202 A.D. and the introduction of ideographs in 292 A.D. and ending with the assistance rendered by Japan in suppressing the Boxer insurrection in 1900. A List of Gods and Goddesses stands next. This is supplemented by short sketches of the lives of celebrated characters in Japanese history, arranged alphabetically and hence beginning with Will Adams. Next comes a General Index for the first six volumes of Captain Brinkley's work, followed by an outline map of Japan.

Vols. VII. and VIII. deal with subjects which Captain Brinkley has specially studied and on which he speaks as an expert. General remarks on Japanese art and Ceramics would be of little value, and as the present writer pretends to no intimate knowledge of these subjects, he will conclude this lengthy but all too short review of Captain Brinkley's *magnum opus* with a list of the subjects treated in the two last volumes on Japan. China and the Chinese, treated in the last 4 volumes of Captain Brinkley's 12 volume work, form a separate subject, and will no doubt be fully noticed by some eminent sinologue later on.

Vol. VII., Chap. I., pp. 1—69, Japanese Practical Art. Chaps. II., III., pp. 69—134, Japanese Applied Art. Chap. IV., pp. 135—161, Bronze Casting, Architectural Sculpture and Decoration, &c. Chap. V., pp. 162—204, Various Applications of Art. Chaps. VI., VII., VIII., pp. 205—311, Sculpture on Sword-furniture. Chap. IX., pp. 312—363, Special Subjects. Besides some 62 notes there is a very full index, the whole volume consisting of 396 pages.

Vol. VIII. is wholly occupied with Japanese Ceramic Art, a subject which for 30 years has been known to be Captain Brinkley's hobby and on which he was always expected to write at considerable length. He has not disappointed us; for his work on this interesting, but technical subject runs to 450 pages. The illustrations in the seventh and eighth volumes especially are superb, and add immensely to the charm of the work. Here is a list of the contents of Vol. VIII. Chap. I. p. 1—38, Early Wares. Chap. II. p. 39—130, Wares of Hizen. Chap. III. p. 131—172, Wares of Satsuma (Kagoshima Prefecture). Chap. IV. p. 173—235, Wares of Kyōto. Chap. V. p. 236—260, Wares of Kaga (Ishikawa) Prefecture. Chap. VI. p. 261—306, Wares of Owari, or Bishu and Mino. Chap. VII. p. 307—410, Miscellaneous Wares. Chap. VIII. p. 411—424 Modern Developments of Japanese Ceramics.

Regarded simply as a repository of technical terms on all the many subjects treated in his work, Captain Brinkley's volumes are far more valuable than any dictionary that has been published in this country. One word in passing from these fascinating volumes. Since the majority of those who value real scholarship in this country as well as in the West are men and women of very limited means, may we not hope that the publisher will supplement this library edition of Captain Brinkley's 12 volumes on Japan and China—which is essentially an *édition de luxe*—by an issue of the same work in a cheaper and less bulky form? It might be well to print the non-technical part of the work, on Japan that is, the matter contained in the first six volumes, by itself for the use of the general public, and only to prepare a small edition of the volumes on Art and Ceramics for the use of experts in these subjects and born lovers of Fine Art. At any rate the volumes on Japan and those on China should be sold separately; as the subjects treated are for the most part quite distinct.

W. D.

THEIR FIRST ENTERTAINMENT.

The curtain drew up slowly: there
Lay Fairyland, so still, so fair,
Its forests bathed in golden light,
The happy vales, the hills all bright.
We watched them eager to discover
The sweet, sweet thoughts of days long over,
The darling imps whose eager eyes
Should hold such wonder, such surprise.
But the scene-painter's vision airy
Was cheap beside their Land of Fairy;
They looked, and looking turned away,
Who walk with fairies every day.
Then came Herr Seeth with all his flock
Of stealthy padding forest-folk;
Here from their native jungle strayed,
What if the children were afraid!
What if to-day come the disaster!
What if they turned upon their master!
Oh, hide the children's eyes. Keep near
The children lest they die of fear!
On the wide ledge they leant and gazed,
Hardly amused, hardly amazed,
Who are acquainted from day to dark
With every beast in Noah's Ark.
The clown, his antics made them sadder,
The dog that leaped from off the ladder,
The elephant with tricks untold,
The waggish pony left them cold.

THE ARGUMENT.

'Twas grown folk that the show delighted,
Grown folk that laughed and were affrighted,
The blasé infants yawning sat:
They knew a trick worth two of that.

K. T. H.

Considerable smuggling of arms and ammunition is going on in the southern Philippine islands.

NEWS OF THE WEEK.

Captain S. Otsuka (37) of the Second Regiment of cavalry, Sendai, committed suicide on Dec. 7th by *seppuku*. Debt is reported to be the cause.

The U. S. Minister is reported to have had an interview with Baron Komura, Minister for Foreign Affairs, on Dec. 8th at the office of the latter.

Owing to losses sustained during several years, the Sakai Rice Exchange intends to wind up its business, for which purpose a general meeting will be held on December 23rd.

A telegram from Nagasaki states that the former Prime Minister of Persia arrived there on the night of Dec. 7th from Shanghai. He left the following morning for Kobe.

It is reported by Tokyo papers that the Musashi Bank and the Soda Bank, both in Yokohama, will amalgamate. The question will be decided at general meetings which will shortly be held.

The *Asahi* states that Baron Sone, Minister of State for Finance, presented to the Emperor on Dec. 8th the draft budget for the next fiscal year for which His Majesty's sanction was obtained.

A telegram dated Dec. 5th from the Japanese Consul at Lyons states that in sympathy with the market in Yokohama transactions in raw silk are active in the French market, prices being steady.

Mr. Y. Matsuyama and other merchants in Osaka have promoted an electric railway between Sotomiya and Ujibashi, the length being 3 miles. The estimated expense is reported to be yen 330,000.

On the 23rd ult., W. Lane and O. Madden headed the list of winning jockeys on the flat with 129 wins each. Lane had only 634 mounts to Madden's 687. W. Halsey came next with 99 wins and 522 mounts.

Customs brokers in Manila are now required to pass an examination in Customs laws, tariffs, classifications of merchandise, rules of loading, discharging and landing of cargo, business training, and foreign languages.

The directors of the Tokyo Electric Light Company have provisionally decided to pay an interim dividend at the rate of 6 per cent. The preliminary decision will be submitted to the general meeting on Dec. 15th.

Mr. V. Chirol, the Foreign Editor of *The Times*, is announced to be on his way eastward again. He is probably going to join the Viceroy's party in the Persian Gulf to describe the tour for *The Times*. Probably Tibet is another objective point.

At Honolulu, on the 10th ult. Mr. James W. Brewster, son of a New York merchant, met at a ball, for the first time, Miss Afong, one of the many pretty daughters of that wealthy and famous Chinese family. They were introduced at 9 p.m. and at 10 o'clock they were married.

The *Seiyu-kai* was to hold a general meeting on December 3rd at the Imperial Hotel at 10 a.m., after which Marquis Saionji, leader of the party, was to entertain the members. The same day, the Progressists were also to meet at their headquarters in Kojimachi and in the afternoon Count Okuma, the Progressist leader, was to entertain them at a garden party held at his residence.

The Superior and Sisters of the Holy Infant Jesus, Yokohama, desire to return their most heartfelt thanks to the charitable ladies and gentlemen, who so kindly assisted in the Concert given on the 25th Nov. in aid of their orphan children, the result of which, expenses paid, is \$446.50 *sen*. They also beg to assure their benefactors that the ardent prayers of their dear children, shall be constantly offered for their welfare.

The new submarine boat adopted for service

in the Russian Navy is built of steel, and is in the shape of a cigar; it is rather more than 66 feet in length, with a beam of 12 feet. The inner compartment of the boat is capable of carrying twelve persons. Above water the boat is propelled by a gasoline motor and by the accumulators when it is submerged, and the boat carries a Dshvezki torpedo apparatus.

According to a Shimonoseki telegram to the *Asahi*, the two new steamers of the Konan (Hunan) Steamship Company which left there on Nov. 10th and which were expected to reach Shanghai on the 16th of the same month are missing. The Shanghai liner *Kasai Maru* sighted them off the Goto islands on the night of Dec. 4th. Another telegram from Osaka announces that the steamers are lying at one of the islands. The ships in question are the *Shoko Maru* and *Koko Maru*.

Lloyds statement of warships under construction in the United Kingdom show 12 British battleships and cruisers of a displacement of 128,120 tons at Royal Dockyards (Pembroke 3, Devonport 1, Chatham and Portsmouth 2 each). At private yards 47 vessels of war, of a tonnage of 171,350 are under construction for the British Government, including three battleships, and eight first-class cruisers. Two armoured vessels are also being built for foreign governments.

Mr. F. E. H. Elliot, the British Consul-General at Sofia, has been appointed Minister at Athens, in succession to Sir E. H. Egerton, who relieves Sir H. M. Durand at Madrid. Mr. Francis Edmund Hugh Elliot has seen extensive Foreign Office service since he was first stationed at Constantinople in 1874. He had been in Greece a good deal before—from 1890 to 1895. He was appointed to Bulgaria in the latter year, and consequently has had an uninterrupted experience of Near Eastern affairs for thirteen years.

The report of the China Traders Insurance Company to be presented at the 37th ordinary meeting says:—The net Premia amount to \$1,515,874.72 and the Working Account shows a balance at credit of \$491,986.38, which sum the Directors recommend be appropriated in the following manner:—A Dividend of 10 per cent. to Shareholders (\$4 per Share) \$96,000.00; a Dividend of 15 per cent. on Bonus-bearing Contributions, (payable to Contributors whether Shareholders or not) 110,000.00; Balance to Underwriting Suspense Account 285,976.38; Total, \$491,976.38.

The *Echo de Chine* mentions with much regret the recent death at Changchou, on the Upper Yangtze, of Frère Delégué of the Little Brothers of Mary, who arrived in August last "to visit the congregations in China, and give in some sort a final consecration to the work of the Marist Brothers." Our contemporary also regrets to learn that the French Admiral Bayle, who arrived at Shanghai on Monday, Nov. 30th, has been plunged into mourning by the death of his eldest son, a most promising sub-lieutenant in the Vosgian Chasseurs, who took part in the recent China campaign under General Voyron. The Admiral has gone to Ningpo.

It is stated in financial circles in Berlin that the maintenance of the three great ocean flyers—*Kaiser Wilhelm der Grosse*, *Kron Prins Wilhelm*, and *Kaiser Wilhelm II*—has proved so unremunerative that the North German Lloyd Company is unable to declare a dividend for the current year. On the other hand, it is said that the Hamburg-American line, which abandoned the construction of six-day boats, will pay from 5 to 6 per cent. The North German Lloyd's fast boats have proved profitable only during four months of the year; for the rest of the time they have been a dead loss. The operating expenses eat up practically all the profits from other sources, such as steerage passengers and freight. Believing that slow boats are the real money-makers, the Hamburg-American line has just contracted with Harland & Wolf of Belfast for a 20,000-ton nine-day vessel, which will enter the transatlantic service next spring.

AMERICAN TOPICS.

Yale University received notice on Nov. 12th of a bequest of \$200,000 when the will of Miss Sarah B. Harrison of New Haven, Conn., sister of former Governor Henry B. Harrison, was presented for probate. Miss Harrison, who was more than 80 years old, leaves an estate of about \$300,000. The remainder of her estate will go to local charities and relatives.

A sum approximating \$1,000,000 ultimately is to reach a number of public and charitable institutions in various parts of the country under the terms of the will of Miss Mary P. Ropes, of Salem, Massachusetts, who died recently. The document provides that the income from all her property, amounting to about \$1,000,000, shall go to her sister, Eliza O. Ropes. After her sister's death the property is to be divided among public institutions and charities in Salem and other Massachusetts cities, in Ohio, Washington, D. C., and other places.

The labour unions of Salt Lake have declared war on the Mormon Church institutions and a fight to compel the Mormon enterprises to recognize union labour will be made. The first move in the fight was the action of the local branch of the International Typographical Union in declaring the *Deseret News*, the official organ of the Mormons, unfair and forbidding any local union officials and all local newspapers to exchange matrices or type with the *News*. The Mormon Church is bitterly opposed to the principles of trade unionism, and has forbidden its members to join the unions.

The will of the late Gordon McKay, inventor of the McKay sewing machine, filed in Boston on Nov. 9 for probate, gives 80 per cent. of the estate to provide for a new school of applied science at Harvard College, the fund to be known as the Gordon McKay endowment. Another feature of the will is the annuities providing for friends and servants, while his two sons are left the smallest annuity of any of the legatees. The sons, Marion Victor McKay and Robert McKay, whom it was reported were cut off by the father, have been left an annuity of \$100 each until they reach the age of 21. Their mother, Mrs. Marion Von Bruning, the divorced wife, is left an annuity of \$11,500.

President Roosevelt has urgently requested Senator Hanna to continue as chairman of the Republican National Committee, and to manage the 1904 campaign, in which Mr. Roosevelt expects to be the Republican standard-bearer. Senator Hanna replied that he was unable to give a conclusive answer at this time, but that he would do so soon. In case he declines, it will probably be on the plea that his health will not permit him to undertake the arduous duties of managing the campaign. In that event, the President will ask former Governor Murray Crane, of Massachusetts, to secure an election to the National Committee, in place of George V. Meyer, the present committee man from that State, with a view of being chosen chairman to succeed Mr. Hanna.

Forty years ago the Negroes of the south did not own a square foot of ground, nor a roof to cover them. Now, on the other hand, there are 130,000 farms owned by Negroes, valued at \$350,000,000; 150,000 homes outside the farm ownership, valued at \$265,000,000, and personal property valued at \$165,000,000. So, starting from nothing, here is an accumulation of nearly \$800,000,000. When the work began, not one per cent. of the Negro adults of the south could read or write. To-day forty per cent. can do so. Fifty per cent. of the children are attending school, and with more facilities more would attend. There are 800 colored physicians in practice, 300 lawyers, and 30,000 school teachers. There are 300,000 books in the homes of coloured people, and they own and publish 450 newspapers and magazines.—*Christian Work*.

According to an observer, Cuba is more prosperous than it has been in ten years. It has

almost recovered from the effects of the war. The sugar crop this year will be the largest ever grown in the island, amounting to about 1,250,000 tons. The largest crop prior to this was grown in 1894, when the yield reached 1,000,000 tons. New mines have been opened in Puerto Principe and Santiago provinces, and a fine grade of ore is being obtained. As to the health of the cities, there has not been a case of yellow fever in Havana in twenty months. The disease has been stamped out effectually by the United States army surgeons. All interest is centered just now on the probable action of Congress on the treaty question, and the belief is general that it will be ratified. Reciprocity will make Cuba one of the most prosperous countries in the world.

The Bureau of Insular Affairs has made public a report by J. T. Norton, a civil engineer, on the proposed three great lines in the Philippines. One line is proposed from Manila to Aparri, a distance of 336 miles, at a total cost of \$6,675,602; another from Dagupan, the terminal of the present railway from Manila, to Laoga, 168 miles, at a cost of \$3,367,036, and a third south from Manila to Batangas, sixty-nine miles, at a cost of \$1,097,457. The estimates given are those of Mr. Norton, who considers that native timber is not to be had near any of the lines except a small part of the Manila-Aparri line, and recommends the use of crocodated timber from the American Pacific coast. He makes the same recommendation with reference to the use of ties, as he thinks that native soft woods are out of the question, because of the climate and insects.

YOKOHAMA GENERAL HOSPITAL.

The following further subscriptions have been received in answer to the Committee's appeal:—

	YEN.
Messrs. Otto Reimers & Co.	250.00
China and Japan Trading Co.	150.00

MAURICE RUSSELL,
Hon. Treasurer.

CORRESPONDENCE.

YOKOHAMA POST OFFICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have the pleasure to inform you that Mr. J. Ikeda, Director of Posts, Yokohama, has been appointed Director of the Post Office in Tokyo and Mr. K. Munesue, who once took charge of this office and since March last has been on an official tour to London as a delegate to the Ninth International Telegraphic Conference, has succeeded him in his position.

Yours faithfully,
T. AONUMA,
Supintendent of Foreign Mails.
Yokohama, Dec. 8th.

PORT ARTHUR.

(FROM OUR CORRESPONDENT.)

Port Arthur, November 18.

A good deal of activity is going on here at present in military circles. I noticed five new regiments arrive here from the north yesterday. They were the 23rd, 27th, 28th, 32nd, and 168th; all of them East Siberian Regiments, so that we have now here, in addition to the above-named, the 2nd, 5th, 14th, 9th, 10th, 11th, 12th, and 13th, at least. Quite a considerable number of Japanese gentlemen seemed to arise out of the earth on the appearance of these troops, which they followed at a respectful distance, displaying on the way such a keen interest in the geology and botany of the district through which they passed that their object was, I presume, purely scientific. The Russians did not seem to notice them.

I do not know if all the above regiments are here or only a part of some of them, but it is very doubtful in any case if Russia ever keeps here a very large force, which would only be a source of weakness instead of strength on account of its tendency in case of siege to exhaust the stock of provisions and increase the danger of sickness while not adding to the strength of the place, which could be perfectly well defended by a garrison of 20,000, including the fortress infantry. Captains have been appointed to the 26th, 27th and 28th, East Siberian Regiments, "newly formed in Port Arthur." On the 18th of October the Vladivostok fortress infantry regiments were incorporated, the 1st with the 29th, and the 2nd with the 30th East Siberian Sharpshooters.

The *Vostochny Vestnik* says that on 30th October 14th November, a sale of land took place at Sanchejen in the foreign Settlement at Gensan, 38 lots in all being sold. Japanese got 20 lots and Russians 18, a lot situated along the sea-shore falling to the agent of the Chinese Eastern Railway Steamship Co.

According to an Odessa paper, the negotiations of the Japanese Consul in Odessa, Mr. Izima, with the oil manufacturers at Baku concerning the direct export to Japan of Russian kerosene, have not ended satisfactorily. The firms of Nobel, Mantashev, Shabaeff and others have told the Consul that until the lapse of the term of their contracts with foreign agents, they cannot undertake the direct exportation of kerosene to the Far East.

The *Novi Krat* is to be made a daily paper on the 1st of January next, about which time the new English and Chinese papers published in connection with it are to appear. The establishment of a Chinese paper in Russian is an especially good idea. Colonel Artemieff is to be congratulated on his business capacity, the fruits of which are seen in the best newspaper in the Russian Far East as well as in numerous libraries and bookstores in Port Arthur and Dalny.

The latest and most important news from the prosperous Siberian centre, Chita, is that the students of the local seminary have been forbidden to read the local papers. The local Press revenges itself in two words—"comment superfluous."

Vladivostok sent a deputation to the Viceroy on 31st October to complain about the way Port Arthur is ruining them by its free trade. The Viceroy told them that the people of Port Arthur would probably be sending him a deputation with the same story a few years hence. His Excellency probably meant that a natural reaction to the present building mania is sure to set in here in the near future. The money market has lost its fluidity in consequence of all the cash available being sunk in houses and none put by for a rainy day, and what occurred in Hongkong in 1849 (when the cost of administration in that colony was £250,000 a year and the receipts not above £12,000) is pretty certain to occur here also. In fact all the leading business men here are, I think, unanimous on that point.

Speaking of Hongkong, the Russians are displaying the same anxiety for the afforestation of their new but decidedly bare-looking acquisition which we once displayed in Hongkong, and I think they could not do better than examine the system of afforestation which has wrought such a complete transformation on the once bare hills of the southern island.

According to the *Vostochny Vestnik*, the transfer of the director of the local branch of the Russo-Chinese Bank, Mr. A. A. Maslennikov, to the directorship of the bank in Port Arthur (decided upon it is said in consequence of the desire to establish in the city wherein resides the Viceroy, the representative of the Emperor in the Far East, a representative bank) is, it appears, postponed, in view of the fact that the branch at Port Arthur is not quite independent, being subordinate to the Shanghai branch of the bank, a condition of affairs which Mr. Maslennikov finds undesirable and injurious.

The Chinese Eastern Railway has just concluded with the Chinese authorities of the provinces through which the line passes the right of working and

exploiting any of the hitherto neglected coal deposits. The agreement between the company and the Government is already in force and the railway company has begun to work some of the mines. The work is conducted under the direction of Mr. Karistratoff, an engineer, but where and at what distance from the railway the mines are situated is not stated.

BURNING OF THE "ARNOLD LUYKEN."

The *North China Daily News* prints the following particulars of the burning of the German steamer *Arnold Luyken*, and the rescue of the survivors. The vessel was on a voyage from Langkat via Hongkong to Tientsin with a crew of six Europeans and 29 Chinese. Her cargo was kerosene oil in cases and without. The fire broke out at 4 a.m. on the 23rd November, with a strong N.E. wind blowing and high sea, when the vessel was about 20 miles north-east of Tientsin. The captain of the C. S. S. *Changchow* reports that he was bound to Amoy from Shanghai, and at about 4.15 a.m. on the 23rd he saw a light and glare in the sky, and steering for it, found it to be a steamer on fire. She was about 15 miles distant when first seen, and when the *Changchow* got near, the vessel was found to be in flames from the bow to the after part of the bridge. As soon as it was daylight, it was seen that there were some people still on board, and with rafts alongside. Shortly after, five Chinese left on one raft and were picked up by the *Changchow*. The Captain and mate came next on another raft, these being the last to leave the vessel. The *Changchow* went searching to leeward and found a raft with the two engineers and two Chinese on it. There being nothing more to be seen in that direction, the *Changchow* returned to the wreck, searching by the way, and saw some pieces of wreckage to windward. The steamer was now in flames from stem to stern and the masts had fallen. Following the wreckage to windward for five miles, Captain Pearce of the *Changchow* found the *Luyken's* life-boat, with the chief engineer and five Chinese in it, and the bodies of the 3rd engineer and one Chinese. The boat had been stove in and swamped on launching. One Chinese was washed out of the boat and sank in sight. Captain Pearce continued searching about for some time but found nothing further, so at 0.45 p.m. he proceeded on his voyage, leaving the *Arnold Luyken* completely enveloped in flames, with constant explosions. The members of the crew saved by the *Changchow* were: Captain C. Ueberfeldt; G. Anderson, 2nd mate; H. Matun, chief engineer; H. Lygen, 2nd engineer, badly burned; and 12 Chinese. They were landed at Amoy, and taken charge of by the German Consul there.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THIBET.

London, December 4.

The *National Zeitung* says news has been received from St. Petersburg that the British action in Thibet was initiated in time to prevent a proclamation declaring a Russian protectorate. But Russian statecraft, it is said, has suffered no serious reverse since 1878.

BRITAIN BUYS THE SHIPS.

Great Britain has bought the two *Chilian* warships under construction in England at a cost of £1,875,000 (together).

NEW BRITISH REPRESENTATIVE AT WASHINGTON.

Later.

Sir Mortimer Durand has presented his credentials to President Roosevelt and stated at the same time that the King had directed him to assure the President of his earnest desire that the friendly relations between the United States and Great Britain might be maintained and strengthened. President Roosevelt cordially reciprocated his Majesty's desire that friendship and goodwill should exist between the two countries.

OPENING OF THE REICHSTAG.

London, December 5.

The Reichstag was opened on the 3rd inst. The Kaiser, who invariably attends, was absent.

AMERICAN COTTON SHORTAGE.

The announcement estimating the shortage in the American cotton crop as being far below expectations, created the wildest excitement on the cotton exchanges. In New York the brokers fought each other in their eagerness. Prices shot up from ten to twenty points at New Orleans, and fortunes were made and lost within five minutes.

The advance of American cotton has caused the most intense excitement at Manchester and Liverpool. It is declared that the result will be a terrible calamity for Lancashire if the American estimate should prove correct.

WRECK OF H.M.S. "FLORA."

The British third-class cruiser *Flora* (4,360 tons) has gone ashore at Denmark Island, British Columbia, and is probably a total wreck. Her stern is ten feet under water.

There were no casualties in connection with the accident to the cruiser *Flora* which, while going full speed in the firing grounds, mistook a beacon in thick weather and ran on the rocks.

London, December 6.

H. M. S. *Flora* lies on an even keel. There is no danger of her breaking-up. Apparently the damage is slight, but salvage will be difficult. When the water is pumped out an effort will be made to haul her off the rocks.

[H.M.S. *Flora* was built at Pembroke and was launched in 1893. She cost £253,783. Captain Casper J. Baker was in command, and commissioned her on 11th November, 1902, to replace H.M.S. *Phaeton* on the North Pacific station.]

THE CONGO HORRORS.

A telegram from the British Consul at the Congo says that he has completed his tour of the Congo Free State on behalf of the Government of Great Britain. The tour should have lasted six months but was terminated in two, as the scenes witnessed rendered further evidence unnecessary. The most horrible outrages are perpetrated in these regions by the Rubber Company; also there is slavery and barbarism of the most revolting form. English observers stigmatize the administration as atrocious and declare that intervention is imperative.

THE COTTON MARKET.

London, December 7.

The excitement on the New York cotton market has temporarily subsided.

FAR EASTERN POLITICS.

There is a temporary lull in regard to the Far East. Attention is concentrated on the assembling of the Japanese Diet yesterday. Hitherto the proceedings have been purely formal, pending the ceremonial opening by the Emperor.

THE CAMPAIGN IN SOMALILAND.

London, December 8.

The correspondent of the *Daily Telegraph* at Aden says that the Italian cruiser *Volturno* has captured the Mullah's right hand man, Abdullah Sheri, who consented to an interview with General Egerton. The capture is likely to alter the whole situation if the interview is satisfactory. The Mullah is supposed to be helpless without Abdullah.

News has reached Berbera that a strong patrol of the Mullah's force has occupied Mudug.

PRESIDENT ROOSEVELT ON PANAMA, TRUSTS AND LABOUR.

President Roosevelt, in his message to Congress, has justified the attitude of the United States towards the Panama revolt, which, he says, was spontaneous. The

United States would have been guilty of folly and weakness amounting to crime had it done otherwise than it did. He re-emphasized the necessity of imposing some restrictions on the Trusts and of checking the tyranny of Labour.

THE ALIEN QUESTION IN ENGLAND.

London, December 9.

Mr. Akers-Douglas, speaking at Shore-ditch, said it would be irregular to anticipate any announcement of the King's Speech. All he would do was to give an assurance that the question of undesirable aliens was receiving very careful consideration by the Government who had every desire to find a speedy remedy.

FIRE ON BRITISH CRUISER.

Later.

Fire broke out on the British cruiser *Hermes* in Devonport dockyard. Admiral Henderson and a strong brigade extinguished the outbreak. The shell-rooms being endangered were flooded to prevent an explosion.

(Note.—The *Hermes* is a second class cruiser, sheathed, of 5,600 tons, 350 ft. in length, 54 ft. in breadth, and 20½ ft. draught; 10,000 horse-power; built at Fairfield in 1898-90. She cost £300,593.)

THE ITALIAN BUDGET.

London, December 10.

The Italian budget statement should (show) an extremely favourable state of the national finances, the estimated surplus being six million lire.

THE BALKANS.

It is reported from Constantinople that Bulgarian bands have crossed the frontier in Adrianople vilayet near Derbishte and attacked Turkish forts but were repulsed with loss.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH NEWS.

Saigon, December 4.

The Chamber has adopted the budgets of the Navy and Finance.

M. Rouvier, Minister of Finance, has established that the situation of France is good. "If our friendship is sought," he said, "it is because we possess two great forces, credit and riches."

FRENCH BUDGET PASSED.

Saigon, December 6.

The Chamber of Deputies has passed the whole of the Budget by a vote of 479 to 57, and has adjourned till the 14th December.

SPANISH CABINET.

The Spanish Cabinet has resigned and been reconstructed by Senhor Maura.

PRESIDENT ROOSEVELT'S MESSAGE.

Saigon, December 9.

The Message of President Roosevelt to Congress at its opening recommends the augmentation of the Fleet. He said that the United States recognised the new republic of Panama in order to secure the construction of the Canal.

(FROM THE "DEUTSCHE JAPAN-POST.")

THE KAISER.

Berlin, December 7.

Kaiser Wilhelm was present at a musical party in the Imperial Palace at Berlin. Eye-witnesses state that he is looking in good health.

RUSSIA'S REPLY.

Russia's answer to Japan's latest demands has already been drafted, subject to the Tsar's approval. A financial report from Paris says that Russia will raise a considerable loan. The first part of the same, 60 million francs, will be placed very soon.

SPAIN.

In Spain Villaverde is forming a new cabinet.

THE FAR EASTERN CRISIS.

Berlin, December 8.

The English press is repeatedly insinuating that Germany is working for a Russo-Japanese war. (Quite the contrary is the case. The English press is every day full of alarming reports, and in Berlin over and over again it is mentioned that these reports are not to be taken in earnest.)

DEATH OF A DISTINGUISHED GERMAN.

Berlin, December 10.

Adolf von Hansemann, a noted financier, director of the Disconto corporation in Berlin, also a distinguished politician, president of the New Guinea Company, and founder of the Eastern Germanization Society, is dead. He was born on the 27th of July, 1826, at Aachen.

RUSSIA AND JAPAN.

The Associated Press in New York publishes an exhaustive despatch concerning a Russo-Japanese understanding. This report is considered in Berlin to be premature, but a definitive settlement is considered to be sure and imminent. The calling of Admiral Alexeieff to St. Petersburg is also considered to be a symptom of peace.

TURKEY AND AMERICA.

The Turco-American incident at Alexandrette (Syria) whereby the American consul is alleged to have been molested, will not bear any political significance upon the Oriental question.

RUSSIA IN THE MEDITERRANEAN.

The Russian press urgently demands that a Russian coal station be secured in the Mediterranean.

THE KAISER.

Kaiser Wilhelm has recovered the complete use of his voice, but the Doctor wishes that he may avoid for some time yet speaking loudly. The recreation trip will take place after the Emperor's birthday, i.e. probably in the month of February.

(FROM THE "JUJI SHIMPO.")

DEATH OF MR. HERBERT SPENCER.

London, December 8.

Mr. Herbert Spencer, the Philosopher, died this morning.

THE U.S. AND THE MANCHURIAN QUESTION.

President Roosevelt, in his message to Congress, refers very clearly to the affairs connected with the occupation of Mukden and An-tung, and adds that the proceedings of Russia are far removed from the common ground of morality and are utterly without reason. Further, he states that, after the question is resolved, an improvement in commerce will appear. He further advises Congress of the necessity for establishing a naval station in the Philippines.

Per British steamer *Manila*, for London via ports:—Raw Silk for Europe, 196 bales; Waste Silk for Europe, 176 bales.

LATEST COMMERCIAL.

IMPORTS.

There are small sales from time to time but nothing of importance. Manchester prices are much higher than those ruling here, and if goods had to be replaced now values would be greatly different. Meantime all business is semi-paralyzed by the political situation.

SWISS WATCH INDUSTRY. 20/-

To Every Commissioner, Post Office and Railway Servant, and Persons Requiring a Splendid
Watch, we offer this opportunity of their obtaining this "Original Swiss Watch" under
Exclusive Privilege. The Watch in question is made on the World Renowned
"GLASHUTTLE SYSTEM" and received the Highest Award at the PARIS
EXHIBITION IN 1889. IT IS THOROUGHLY REGULATED, A SILENT
TIME-KEEPER, AND CARRIES WITH IT A THREE YEARS' WRITTEN
WARRANTY. It has Three Heavy Cases, which are
made of unalloyed, Swiss Metal, Keweenaw, and fitted on
the latest principle, and the finest Commissioner cannot detect
THE DIFFERENCE BETWEEN OURS AND THE USUAL
10 GUINEA WATCH. It weighs like a Real Gold watch, the only
Watch of its kind having that advantage. To introduce this
Watch to the English Public, and Colonists, we will deliver
EITHER LADIES OR GENTS for 20/- each, post free
(formerly costing 25/- each), on receipt of Money Order for that Amount. A
Leather Case is also given gratis with every Watch. Reasonable chains,
Alberts, or Necklaces of the same Metal can be had for 25/- each, according to
weight. Any Article bought and not approved of will be exchanged. The European
Fame of our firm, according to our daily orders and "Tested" Testimonials
proves the Soundness of our Advertisements. Post Office or Postal Orders should be
made payable to MESSRS. BONEBRUN, BAILEY & CO.

**HOLLOWAY'S
PILLS**

Cure Indigestion,
Bile, Sick Headache, Ciddiness,
Palpitation,
and all Internal Disorders

**THESE PILLS
ARE PURELY VEGETABLE;**
they contain no deleterious
matter, and may be taken by
the most delicate

Manufactured only at 78, New Oxford St. (to the Old Palace Yard)
London. Sold by all Chemists and Medicine Vendors.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 19TH, 1903.

BIRTH.

At Bordeaux, France, on the 14th November, the wife of G. CAMPREDON, of a Daughter.

SUMMARY OF NEWS.

MR. A. SHINOMIYA, former member of the Lower House, died on Dec. 12th in Tokyo.

THE mother of Marquis Saionji passed away on Dec. 10th at Kyoto. Her age is reported to be 74.

THE dead body of a woman, about 16 years old, was found on Dec. 13th on the railway near Oiso station.

A TELEGRAM from Nagasaki states that over 1,000 tons of coal were sent from that port on Dec. 16th for Port Arthur.

VISCOUNT IKEDA, ex-feudal lord of the Inaba clan, who had been ill for some time, passed away on Dec. 13th. His age was 58.

MARQUIS SAIGO, son of the late Admiral Marquis Yorimichi Saigo, was appointed on Dec. 13th a member of the House of Peers.

SIR FRANCIS LOVELL proposes to make another Far Eastern tour in search of funds for the London School of Tropical Medicine.

MR. KANO TETSUSABURO, Judge of the Yokohama District Court (Chief of the 1st section of civil affairs) has been promoted to a position in the

Tokyo Appeal Court. Mr. Hasegawa Kintaro, a judge-associate, succeeds to the vacancy.

S. ISONO, who was charged with robbery and murder, was sentenced in the Yokohama District Court on Dec. 10th to penal servitude for life.

THE *Asahi* states that Mr. Carl Helm, a German subject, living at No. 120 Bluff, Yokohama, has applied to Governor Sufa for naturalization papers.

LIEUT.-GENERAL YAMAGUCHI has been decorated by the Italian King with the First Order of the Crown for his action in the Chinese troubles in 1900.

Two pointsmen employed at the Koku Railway station, Iida-machi, Tokyo, were run over on Dec. 13th by a goods train which was derailed in the station.

A TELEGRAM from Nagasaki states that 4,000 tons of Cardiff coal out of 50,000 tons ordered by the Sasebo Naval Station, are expected to arrive about Dec. 15th.

COMMANDER J. G. HEUGH, D.S.O., R.N., Retired List (Jack Heugh of the *Rattler*), has been appointed Lieutenant Instructor to the Royal Volunteer Reserve.

THE trial trip of the new steamer *Nikko Maru*, of the Nippon Yusen Kaisha, which was recently launched at the Nagasaki shipbuilding yard, took place on Dec. 10th.

TOKYO papers states that Mr. Kono Hironaka sent on Dec. 10th by post to the head-quarters of the Progressists an intimation of his wish to withdraw from the party.

At the general meeting which was held on Dec. 13th, the Sanyu Railway Company decided to construct a section between Naigu and Jutani at a cost of yen 380,000.

Y. HAGIWARA, a bailiff belonging to the Omachi Local District Court, Matsumoto, and one other were arrested on Dec. 11th on suspicion of having forged official documents.

Two goods trains collided on Dec. 13th at Nagoya station with the result that twelve cars of the train from Maebara were badly damaged. Fortunately no person was injured.

THE British steamer *Manuense*, in stated by the *Jiji* to have run ashore on the night of Dec. 14th off Muroran, Hokkaido. Her cargo consists of sulphur. The crew are reported to be safe.

C. YAMADA, Manager of the 62nd Bank, Mito, and three others were arrested on Dec. 16th. The judicial officials searched the bank. The *Jiji* states that they are charged with embezzlement.

THE *Jiji* says that a vessel was wrecked on Dec. 16th off Shiraha, Shizuoka prefecture, and three of the crew were drowned. The paper does not state whether the ship was a steamer or sailing vessel.

THE *Asahi* states the carriage of Marchioness Oyama ran over an old woman on Dec. 13th at 6 p.m., near Omote cho, Akasaka, Tokyo. The unfortunate woman was at once removed to hospital.

THE steamer *Gensan Maru*, which recently went ashore off Nemuro, Hokkaido, and sustained severe damage was re-floated on Dec. 14th. The Imperial Marine Insurance Company, who insured

the hull, notified the ship-owner that the company had no responsibility after she was floated, which intimation has given rise to disagreements that may have to be settled in the Courts.

THE dwelling of G. Takahashi, pawn-broker, Kojimachi, Tokyo, was entered by an armed robber on the night of Dec. 15th. It is reported by the police that a small amount of money was stolen.

THE Hunan Steamship Company's two steamers *Shoko* and *Genko*, which were first reported to be missing and later to be taking shelter at one of the Goto islands, arrived on the morning of Dec. 16th at Shanghai.

A WORKMAN employed by the Marukoshi Rice Refining Company, Fukagawa, Tokyo, was killed on Dec. 13th, by a machine he was oiling. It is said by Tokyo papers that a toothed wheel of the machine took hold of the man and he was immediately crushed.

MR. OZAKI, Mayor of Tokyo, issued, on Dec. 10th, a notification urging upon people the necessity of exterminating rats and of keeping clean all dwellings and premises in order to avert a re-visitation of the plague.

SOME of the crew of the German steamer *Helen Rickmers*, which is now at Moji, had a quarrel with Chinese residents of Shimonoseki on Dec. 10th. Four of the latter were injured. The police are now enquiring into the trouble.

THE first census in Hongkong was taken 62 years ago. The population was then 15,000. On the 30th June, 1902, the last census, it was 311,824, the British and foreign community alone numbering 18,524, or more than 3,500 more than the total population in 1841.

THE last mail from England brings news that Mr. C. E. Bruce-Mitford, Principal of the Yokohama Modern School, has just been elected a Fellow of the Royal Geographical Society. We may be permitted to extend him our hearty congratulations.

THE Russian post and telegraphic authorities have invited a leading cable-laying firm to draw up estimates for laying a telegraphic cable across Lake Baikal. The cable would be 55 miles in length, and similar to the Atlantic cables. The depth of Lake Baikal varies from 600 to 900 fathoms.

K. HANADA, who had been arrested at Vladivostok by the Russian Customs officials on a charge of having in his possession Russian forged notes, and who had since been undergoing examination, is reported by the *Jiji* to have been sentenced to eight years' confinement with hard labour.

THE customary assembly in Tokyo of the provincial governors will be held about the end of January. The *Jiji* states that the annual ordinary conference is usually held in March but this year the time has been advanced so that the Government may give instructions to local officials with regard to the elections.

G. WASHIO (25) and Haru (21), the wife of S. Nara, who had been charged with having attempted to murder the husband of the woman on August 1st by giving him poison in his tea, and who had since been undergoing examination in the Tokyo District Court, were discharged on Dec. 10th on the ground that the evidence against them was insufficient.

FOREIGN POLITICS.

Saturday, December 12.

There appears to be no longer any doubt that Viceroy Alexieff's visit to St. Petersburg has been postponed or abandoned. Supplementing previous information on this subject comes news to the *Fiji Shimpō* that a direct telegram from the Tsar has ordered him to remain at his post.

It is reported from Shanghai on the alleged authority of a letter from an Englishman in Port Arthur, that a large body of Russian engineers have just left the latter place for Haicheng and Liaoyang where they are to build forts. The same letter affirms that Russians in Port Arthur hold the view that their country has succeeded at all points, and that the absorption of Manchuria and Korea into the Russian empire is an assured fact.

It is quite curious to observe the importance that has been attached by many journals in Japan to an extra published by the *Yorozu Choho* on Wednesday evening, saying that, according to a telegram received at the United States Legation in Tokyo, the negotiations between Russia and Japan had failed. We did not think it worth while even to allude to the extra, so manifest was its untruth. But a great many of our contemporaries seem to have regarded it more seriously.

This abuse of extras has naturally flourished not a little during the present complication. No wide-awake person in Tokyo now thinks of purchasing an extra without first ascertaining the name of the paper issuing it. A *Fiji* extra, or a *Kokumin* extra, or an *Asahi* extra would be bought at once, but there the list virtually stops. The *Fiji* endeavours to check the abuse by publishing an item of intelligence in the morning and accompanying it with a proviso that unless something unusual occurs there will be no extra. Should, then, any other newspaper publish an extra in the face of this promise, its contents are practically discredited on the *Fiji's* authority. But the precaution sometimes leads to quaint results. For example, on the morning of the day for the official opening of the Diet our contemporary announced that unless there were an incident, of which evidently no sign then presented itself to the *Fiji*, there would be no extra. But it so happened that a very big incident did occur, and the streets were flooded with extras which had a veritable tale to unfold.

The French Minister's action, reported a few days ago, appears to have produced quite a commotion in Peking, the pro-Russian party under Ku Fung-ki being all in favour of accepting M. Dubail's suggestion, and the anti-Russian party under Na Tung being equally insistent in the opposite direction. It is reported that Prince Ching sent Lien Fang, Vice-Minister, to inquire from M. Dubail what proposals Russia had to make, and that the French Minister replied in the sense that if China were really in earnest, he would undertake the duty of mediator.

Monday, December 14.

All the telegrams from Peking go to indicate that China is growing weary of the delay in the Russo-Japanese negotiations and of the obscurity surrounding Japan's proposals. She appears to have become doubtful whether she herself will be much of a gainer even though the negotiations go in favour of Japan, and among her officials there has of late grown up a party who advocate the re-opening of communications with Russia for the purpose of arriving at an understanding by which something at

least may be saved from the wreck of the Middle Kingdom's fortunes. As to the steps she is likely to take in pursuance of that plan, supposing it to be definitely adopted, nothing is yet known; nor, indeed, is it possible to say with assurance that the idea of going behind Japan's back is seriously entertained in Peking. China should see plainly that by such a course she would alienate the sympathy of the only Power disposed to hold out a helping hand to her and would play Russia's game to perfection, for Russia has persistently maintained from the first that she should be suffered to settle affairs with China alone, and that no other State has any valid title to interfere. Could she succeed in giving practical effect to that contention, especially with the full consent of China, the situation would be relieved of all difficulties for her. Then indeed China would find herself the target of all the Powers, for if she deliberately give herself away to Russia she may be absolutely assured that other States will expect her to be at least equally self-sacrificing for their benefit. It is written in the pages of history that Great Britain originally obtained the cession of Hongkong by pleading the want of some place to careen her ships. China could not refuse, but she looked forward with keen anxiety to the treaties that other States would ask her to conclude in the sequel of the Nanking Convention, her not unnatural expectation being that each and all of them would also have ship-careening needs. Perhaps the recollection that they did not press for absolute equality of spoliatory privileges on that occasion, may now inspire her with some hope of similar forbearance. Hope, indeed, is all she has to support her.

Later news from Peking indicates that M. Dubail continues active efforts to bring about a settlement of the Russo-Chinese complication, but whether he is acting by command of the home Government or of his own initiative there is as yet no definite information. On the 11th instant Mr. Uchida is said to have called on Prince Ching with reference to this matter, and to have obtained from him an assurance that the Chinese Government had not the smallest intention of departing from the attitude hitherto maintained by it toward Russia's proposals.

The matter-of-fact view taken by China seems to be identical with that formulated in these columns on receipt of the original intelligence as to Russia's new demands; namely, that if recognition be extended to the principle that a Power having definitely pledged itself to carry out a certain engagement is entitled to make the fulfilment of its promise conditional upon satisfaction of a fresh series of demands, there can be no such thing as finality, and every question of importance would drag on for ever. Thus the dimensions to which an affair, however small at the outset, might ultimately grow would be quite unforeseeable, and international engagements would be idle frivolities.

It is stated that the strong-foreign-policy party in China has been considerably strengthened by the news of the dissolution of the Japanese Diet, which event is lightly interpreted as an indication that the Japanese nation will not endure any paltering with the Manchurian question.

Prince Ching is reported to have emphatically informed the United States Representative that no secret agreement of any kind has been concluded between China and Russia.

All the Tokyo journals publish statements

to the effect that on Friday last Baron Rosen conveyed to Baron Komura the reply of the Russian Government to Japan's proposals submitted on the 30th of October. As to the nature of the reply, however, no responsible newspaper undertakes to give any definite information, though one or two express the opinion that Russia does not yet show willingness to make any substantial concession.

The *Fiji Shimpō* publishes a strong article contending that although faulty in the matter of procedure the Reply voted by the House on the 10th instant embodied the sentiment of the nation with regard to the situation, and that since Japan does not ask for anything in the remotest degree unreasonable, she can not submit to have her just demands ignored or to be kept perpetually in suspense about Russia's intentions.

Tuesday, December 15.

The German Chancellor has just told the Reichstag that there is no part of the globe in which Germany is so little concerned as Manchuria. One marvels at the wasteful courage of such declarations. For, after all, the spring of 1895 is only eight and a half years distant, and in the spring of 1895 Germany was so much concerned about the fate of Manchuria that she joined Russia and France to drive Japan out of it. The plain truth, known to everyone and appreciated by every one, is that Germany is under a terrible exigency to remain on the best possible terms with Russia. Geography imposes that duty on her, and that she should observe it carefully is natural and proper. She concerned herself about Manchuria in 1895 because she thereby furthered Russia's convenience, and she does not concern herself about Manchuria now because to do so would cause inconvenience to Russia. Count von Buelow can scarcely be expected to utter these plain truths in the Reichstag, but why not keep silence altogether about the matter? Germany forfeited a large share of Japanese friendship by her action in 1895. She certainly can not recover the loss by informing the nations to-day that there is no part of the world in which she is so little concerned as Manchuria: in other words, by informing the nations that she played Russia's game in 1895 at Japan's cost and that she intends to play it again now. To play Russia's game where others only are sacrificed thereby is a necessity of her existence and Count von Buelow, by needlessly parading it, shows that he is little concerned not about Manchuria alone but also about Japan's goodwill. Russia would be all right if she refrained from making needless promises which her imperial interests prevent her from keeping. Germany would be all right if she refrained from offering clumsy explanations of acts which every one understands.

Tokyo newspapers agree in saying that Russia's answer to Japan's proposals of October 30th was received by the Government of this Empire on the evening of the 11th instant, and they agree also in differing about the nature of the answer, some alleging that it was humiliating to Japan, others that it embodied some sort of concessions, and others that while effecting some slight rapprochement between the two Powers, it still left them so far asunder as to require a fresh interchange of notes. We imagine that the last view is nearest the truth, but as rigid silence is observed in official quarters, the public are condemned to pure conjectures. At all events a final

settlement is not yet in sight, and the best that can be predicated is the growth of a conciliatory spirit.

It has been stated that on the 12th instant the Tokyo stock market reflected the more hopeful phase of the situation, but truly the appreciation of securities was so small that it could scarcely be regarded as an indication of anything beyond the fact that Russia has re-entered the field of negotiations after her long silence.

Wednesday, December 16.

A Japanese traveller who has just returned from Moscow *via* Siberia, tells the public through the columns of the *Hochi Shinbun* that when Viceroy Alexieff dismissed the Japanese workmen engaged at Port Arthur, the news produced a sensation in Europe, drove down the market value of Russian securities and impelled the Chinese merchants in Manchuria and Siberia to present for exchange all the rouble notes in their possession, so that Russia found herself embarrassed on every hand. Hence the reason, according to this informant, of her anxious efforts to reassure Europe by declarations of peace circulated chiefly from Berlin. Did definitely warlike news reach Europe, the Great Northern Power would suffer considerably before a shot was fired.

Tokyo journals affirm that undoubtedly diplomacy has entered a stage of renewed activity. They speak of the goings and comings of prominent statesmen, but they evidently remain quite uncertain about the features that the negotiations have developed. Count Okuma is represented as having said that Japan has yielded to Russian pressure, but he adds that Russia has yielded something also. And that appears to be the general impression, probably because it is the natural outcome of a situation from which each side is willing to emerge amicably. Neither party to any negotiation expects to obtain in full the terms he originally stipulates for. A *via media* means that each must sacrifice something. What has been sacrificed and what secured must remain for the moment in obscurity, and we see not the least use in detailing the conjectures that fill the air. It may be mentioned, however, that the *Asahi Shinbun* has a very strong article claiming that the time for negotiations has passed and gone. By attempting to continue in the route of *pourparlers* Japan will presently find herself in a hopeless *impasse*. The *Asahi* interprets in that sense the address to the Throne adopted unanimously by the House of Representatives. The article in an unequivocal call to arms.

On the other hand we have M. Delcassé's very plain declaration of conviction as to a peaceful issue. Apart from the British Secretary for Foreign Affairs, who must be presumed to possess special information, there is no statesman in Europe whose forecast would command wider credit than that of M. Delcassé. His circumspection and the soundness of his judgment are proverbial, to which must be added the fact that since his country is Russia's ally, he may be supposed to know Russia's mind. We regard his prediction as the best indication yet afforded, though indeed for our own part we have always been more than hopeful of a pacific issue.

The one thing certain is that whatever compromise the Japanese Cabinet makes will be unwelcome to the Japanese people, in so far as it is a compromise. Russia, in our opinion, has made a mistake. Perhaps

there were reasons for her delay, apart from the general conviction that time exercises a soothing effect on all controversies. But if, after hesitation which the Japanese nation has rightly or wrongly come to regard as an evidence of contempt, she now step forward with insignificant concessions; her tardy goodwill is unlikely to find a gracious reception. And for the Japanese Cabinet such a result will be simply fatal. Even the moderate *Kokumin Shinbun* insists that the time for action has come, and that however unwilling Japan may be to disturb the peace of the East, she can not refuse the challenge thrown in her face by Russia. If the Ministry, failing to appreciate the situation, continue to trust to delay and procrastination, and to rely on talk, there will cease to be any reason for its remaining in office. So says the *Kokumin*. The next few days, then, must be a decisive era in the history of the Far East.

It is worth while referring to an article in the *Dempo Shinbun*, headed "11.59 p.m." This journal opines that the last minute has come. Fight and win, fight and be beaten, any how fight. That is the sum and substance of the *Dempo*'s advice. It declares itself worn out with trying to be patient, and it indulges in many flowers of rhetoric to describe the moral differences between the two combatants if they enter the lists. We refrain from re-producing any detailed phrases from this article. It is an ebullition for which every observer of the situation must have been prepared, and while many may think that the immediate danger of war is past, few can stifle the apprehension that some of Japan's best men will suffer in the sequel.

The *Tai-Ro Doshi-kai* was to have presented a petition to the Throne yesterday. A copy of the document is published by vernacular newspapers. It is an unequivocal declaration that negotiations have ceased to be tolerable; that Russia has challenged Japan and that the latter has no choice but to fight. To disturb the peace is the last thing she would do willingly, but Russia has forced her to the act. Her patience and self-effacement have reached an extreme limit, and it is worse than useless to continue negotiations to which the other side brings no spirit of sincerity.

This is the second petition presented to the Throne since the dissolution of the Lower House.

Thursday, December 17.

Evidently there is an attempt—a renewed attempt—in Europe to convince the public that things have taken a distinctly peaceful turn in the Far East, and even that Japan has accepted Russia's reply to her proposals of October 30th. Considering the large financial interests that are concerned in the capitals of Europe, we can not wonder that strenuous efforts are made to prevent the fall in Russian securities which must result from a warlike ending to the present complication. But it is unfortunately quite incredible that Japan has accepted Russia's answer as satisfactory. Had anything of that kind occurred, the public would not now be groping in the dark. We do not pretend to any special knowledge of the course of the negotiations, but we have no hesitation in saying that everything depends on Russia. Japan has already proved her moderation and reasonableness, but it remains for Russia to make some display of similar qualities and she certainly has not yet done so. We believe that she will ultimately, and we have always believed it. But until she does so, all this talk in Europe, from

whatever source inspired, is obviously insincere.

A meeting of the Cabinet Ministers and the Elder Statesmen took place yesterday in Tokyo, Marquis Ito coming to the capital for the purpose of attending it. Meanwhile the minor journals of the capital talk mysteriously. The *Yomiuri* hints that there is an intention of immediately sending a force to Korea. The London *Daily Mail*'s correspondent sent an army there weeks ago, and moreover assembled a hundred thousand Japanese troops at Hakodate. There are grave seigniors in this world who still believe in the enchanted carpet of the Arabian Nights, and think that two or three divisions can be carried hither and thither as a small pic-nic party is in a yacht.

From London, under date of Nov. 20th, there was wired to the *New York Herald* an epitome of an interview alleged to have taken place between the Japanese Prime Minister and a correspondent of the *Manchester Guardian*. The Minister is made to say, among other things:—

Asked about the view expressed in some Japanese papers that Russia's recent action amounted to an attack; that the retention of Russian troops in Manchuria was a challenge which Japan must accept, the Count replied:—

"No, it is nothing of the kind. That is only a little newspaper sensationalism. The agitation in the Japanese press about Russia's pledge to evacuate Manchuria does not represent the views of the Japanese Government. Russia only said that to China as a mere voluntary promise. It was no pledge to Japan; it cannot be insisted upon by Japan as an obligation."

"If Russia does not keep faith it is to her discredit, but it is no *casus belli* to Japan. All that talk is a mistake. There is no difference of opinion in our Cabinet. The British opinion seems to be that if Russia will not withdraw it is no use making a fuss so long as the open door is guaranteed, with full maintenance of treaty right; and the British view is our view in this matter."

It is our firm conviction that Count Katsura did not say the things here attributed to him, for Japan is unquestionably entitled to a voice in the fate of Manchuria. There is only one safe rule for statesmen when they are approached by newspaper-reporters. It is to insist that nothing shall be published which has not been previously supervised by the person interviewed or by his private secretary. The average reporter has a poor memory, a callous conscience and a vivid imagination. Besides, he is generally obliged to be sensational.

Friday, December 18.

It is impossible not to sympathise with the *Jiji Shimpō*'s view of the situation. What conceivable theory of probabilities and chances can account for the rumours and statements persistently audible in Europe during the past few weeks? It can not be a matter of accident. There is some deliberate inspiration for such things. Possibly it is honest inspiration. Russia may really and sincerely intend to offer at the eleventh hour terms such as Japan can accept without loss of honour. Thus what Europe is now saying may be a true forecast of what will ultimately happen. But if that hypothesis be in any degree tenable, how are we to account for the fact that Russia has not yet made the least practical attempt to advertise Japan of her pacific intentions? For it must be taken as certain that she has not made any such attempt. It must be taken as certain that the reception officially given by her to Japan's proposals is flagrantly irreconcilable with Europe's picture of the situation. In a word, she maintains her obdurate and *insouciant* attitude in the Far East, she continues her military and naval preparations, and she

declares, or her friends or agents declare, in Europe that everything will end peacefully. Without undue distrust the Japanese may well be pardoned if in the face of such events they think as the *fiji* thinks that Russia is trying to persuade Europe of her own amicable purpose and procedure, but at the same time is doing nothing whatever to placate Japan, thus by diplomatic indifference and belligerent preparations goading the latter beyond endurance, so that upon Japan's shoulders will ultimately rest the responsibility of appealing to the sword. Such is the *fiji*'s view. We have ourselves already pointed out that if Russia continued in her route of diplomatic nonchalance and military activity she would inevitably expose herself to such suspicions. But the whole thing is rather too shallow to have been deliberately planned by shrewd statesmen. The officials in St. Petersburg must well know that Europe's eyes can not be permanently blindfolded, and they must also know that the great patience and forbearance hitherto shown by Japan will weigh heavily against any ultimate charge of pugnacity. There certainly has been a marked effort to discredit that patience. Certain Russia journals have had the magnificent effrontery to accuse Japan of bellicose aggressiveness, thus preparing the way for the drama now unfolding itself. Russian newspapers, however, naturally believe that their country has right and justice on her side from point to point, and since that easy explanation of their attitude presents itself, we need not go far afield in search of sinister motives. Whatever be the inside facts about the dust now thrown in Europe's eyes, that dust is being thrown can not be doubted, and since Russia alone can profit by the operation the *fiji*'s view is more or less inevitable. Of course the *fiji*'s view is not universally held. The *Nichi Nichi*, for example, finds nothing strange in the protracted character of the negotiations. That is the way of negotiations, it says, when each side is straining every nerve to gain as much as possible and to sacrifice as little as possible. But the *Nichi Nichi* does not venture to tell its readers that Russia has shown a disposition to sacrifice anything at all. The *Asahi* takes an interesting view. It premises that Russia has given no sign whatever of meeting Japan half-way, but it does not entirely endorse the theory that the rumours of peace now circulated in Europe have for ultimate object the imposition of peace-breaking responsibility on Japan's shoulders. It thinks that the people of the Occident have interpreted the dissolution of the Diet as a sign that although the Japanese nation may desire to take a strong line, the Japanese Government is determined to yield. The *Asahi*'s conclusion is that to continue the negotiations is worse than futile. Strange to say the organ of the business men, the *Shogyo Shimpo*, writes as though the Japanese Government had now absolutely determined on war unless its proposals be accepted in their entirety. An article composed under the influence of such a conviction is naturally very strong. As for the *Dempo Shinbun*, it seems to believe, or professes to believe, that the Japanese Government will yield everything, and it pours corresponding contempt on the head of the Cabinet.

We note with concern the greatly changed temper of the Japanese press. But it is not unexpected. Evidences that the country's patience was being worn very thin made themselves apparent nearly a month ago.

One reservation must be emphatically

made with regard to the suspicions alluded to above. It is that neither the German Chancellor nor the French Minister of Foreign Affairs would have lent themselves for a moment to any deceptive programme. They were unquestionably sincere in their declarations of pacific conviction.

Tokyo newspapers remain in absolute ignorance of the matters discussed or the decisions arrived at by the Council of Ministers on the 16th instant, and strange to say, no serious attempt is made to conjecture anything. The five *Genro* were present—Marquises Ito, Yamagata, and Oyama and Counts Inouye and Matsukata—and the Cabinet was represented by the Premier, the Minister of Foreign Affairs, and the Ministers of War and of the Navy. It is stated that Baron Kodama also attended. There was considerable variety in the times of arrival of these distinguished personages and their departures were almost equally irregular, so that whereas all had not assembled before 3 p.m., some did not take their departure until after dinner in the evening. We mention these facts simply because a large share of public attention has been drawn to this council, not because we believe that its discussions were particularly weighty or that it arrived at any particularly important decision. The truth is that the situation having become very sensitive, every sign of activity among statesmen is invested with significance in public opinion.

Naturally there are many rumours flying about with reference to activity at the dockyards and arsenals and movements of the fleet, which latter is supposed to be about to make a demonstration in Korean waters. There is also a renewal of the rumour that the Government has applied to the Nippon Yusen Kaisha for transport steamers. We suggest the advisability of regarding all these stories with little credulity.

Nevertheless the share-market barometer fell on the 16th instant. It was not a very marked fall in Tokyo, but Osaka showed itself more nervous. However, in neither case was there anything like a serious slump, though some of the newspapers employ a term of that significance.

DOMESTIC POLITICS.

Monday, December 14.

The *fiji Shimpo* devotes itself chiefly to combating the idea which foreign observers may possibly entertain, namely, that there is some radical difference of opinion between the Government and the nation with regard to foreign politics. There is no difference, except it be that the people are weary of the long protracted negotiations and would fain have the Ministry adopt an attitude tending toward a speedy settlement. The significance of recent events is that the Cabinet is assured of having the whole nation at its back for the purposes of a resolute policy.

The *Kokumin* shrewdly calls the attention of party politicians to the fact that whereas they complain loudly of the injury done to constitutional institutions by the Ministers of the Crown, it is in reality by their own hands that injury is inflicted, since, departing suddenly from procedure which has acquired the force of prescription, they resort to hole-and-corner devices in the pursuit of their designs. On the other hand, it is not to be denied that the nation will not endure any paltering with the Far-Eastern question, and that the Cabinet's responsibility has been increased by this incident. The only way to avoid a collision with the people is to effect

a speedy settlement of matters which threaten to disturb the peace of the East.

The *Nichi Nichi Shinbun* devotes itself chiefly to demonstrating the extravagance of the language used in the Reply, where without pausing to hear the Government's explanation of the situation or to learn the details of the administrative and financial reforms contemplated, the House declared that the former forfeited occasions and that the latter was a policy of opportunism.

Among the minor journals, the *Nippon*, the *Dempo Shinbun*, the *Yomiuri*, the *Hochi*, and the *Jimmin* are all loud in their praise of the incident. The *Jimmin* finds a parallel in Hungarian history, but without descending to details it will suffice to say that the basis of these journals' theses is abuse of the Cabinet and loud applause of Mr. Kono Hironaka. Strange to say the *Yomiuri Shinbun* attacks its traditional friends, the Progressists, and adopts Mr. Kono's cause without reservation.

The *Tai-Ro-ko Seinen-kai* addressed to the Throne on the 11th instant, over the signatures of 18 of their leading members, a very strongly worded petition. The document declares that Russian aggressions in Eastern Asia have developed unendurable dimensions; that they threaten the integrity of the Japanese empire and make the preservation of Oriental tranquillity impossible; that the gravest national interests are imperilled; that the moment for action has arrived beyond all doubt; that nevertheless the Ministers of the Crown are paltering with the situation, and sacrificing the country's cause by procrastination and indecision; and that the petitioners pray their Sovereign to disregard their own insignificance when considering their petition, and to restore the nation's confidence while securing the Empire's safety and guaranteeing its future, by resolute procedure.

It appears that this petition was presented originally on the 7th instant, but that it was sent back by the Court officials for amendment. Another petition in the same sense is to be presented by the *Tai-Ro Doshikai*'s parliamentary members, and it is anticipated that these documents will be the forerunners of many similar prayers from various quarters. There is said to be a very strong feeling that as the Address to the Throne voted by the House of Representatives on the 10th inst., was not formally submitted to His Majesty, the people should widely avail themselves of their right of petition.

The Progressist members of the Diet have held a general meeting and passed a resolution condemning in the strongest terms the Government's action. They declare that the Cabinet, in recommending the dissolution of the Lower House, showed their contempt for public opinion, jeopardised the future of the Empire, and failed conspicuously in the discharge of their duties as advisers to the Throne.

At a friendly meeting of the same party in the Imperial Hotel the same afternoon Count Okuma delivered a speech of some length. He expressed regret that owing to some error of procedure the Address to the Throne had been couched in terms amounting virtually to an impeachment of the Cabinet, but he claimed that the statements contained in the Address were a true expression of Japanese national sentiment. What the Count seemed to regret chiefly was that such a declaration of opinion should have gone out to the public without

an exhaustive discussion elucidating the views of the people's representatives and of the Ministers of the Throne. He then went on to complain bitterly of the corruption prevailing in the constituencies; a state of affairs which he compared to that existing in the United Kingdom in the days of Walpole, when the corrupt condition of domestic politics in England re-acted upon her position abroad, and for a time she lost all status in the Councils of the nations until Pitt, arising, restored purity and led his country into the van of the crusade against a military dictatorship in Europe. The present era in Japan might be compared to the Walpolean era in England, and the analogy would surely be completed by the dawn of an age of honesty and integrity. The responsibility for existing evils rested with the Government, who by their secret agents and covert partizans enveloped the constituencies in an atmosphere of corruption.

The *Seiyun-kai* members held a meeting the same day and listened to a speech from Mr. Matsuda Masahisa, who claimed that whereas the *Seiyun-kai* were not necessarily hostile to the Government, the latter had failed to appreciate the Party's purpose, and nothing now remained except a trial of official strength on one side and party endurance on the other. They must be prepared from several repetitions of appeals to the constituencies, and must face the ordeal with unflinching resolution.

Mr. Hara Kei then presented a report of the Party's proceedings in the Diet. This document contained a detailed reference to the Address to the Throne. It declared that whereas the procedure adopted with regard to the Address had been faulty, there did not appear to be any objection to the sentiments embodied in it, and consequently it had been decided not to reconsider the vote passed by the House, but to entrust to the Party's parliamentary leaders the duty of impeaching the President, Mr. Kono Hironaka.

This report evoked objections. Mr. Shigeoka Kungoro led the opposition to it, his contention being that greater prominence and emphasis should be given to the Party's approval of the declaration condemning the Cabinet's foreign policy. Several members endeavoured to uphold the report, but Mr. Shigeoka's views ultimately prevailed, and a committee of five were appointed to remodel the document.

It will be seen from the above that had the Lower House opened its session on the 11th instant, the first step taken would have been a motion by the *Seiyun-kai* to change the Order of the Day for the purpose of introducing a resolution condemnatory of the President's action. But the President gauged the situation. He knew what would happen if he rung the fateful hand-bell summoning the members from their rooms, and he knew that if he did not ring his bell the Government's fiat as to dissolution must be proclaimed. It was an extraordinarily dramatic moment; the members and the Government's delegates alike waiting with bated breath for the sound of the bell and the unflinching Kono, whose seven years of imprisonment had taught him the uses of patience, holding the little instrument silent in his grasp. His own impeachment would destroy his great *coup*; the sentence of dissolution would crown his feat. He won.

Wednesday, December 16.

The *Seiyun-kai*, relieved from the immediate pressure of parliamentary responsibility,

have amended their report so that it reads as an unequivocal endorsement of Mr. Kono Hironaka's Address to the Throne. The text of this report—amended, it will be remembered, from the draft originally compiled by the Committee—has not been published. It has to await Marquis Saionji's approval and he is absent from Tokyo. Whether it will obtain that approval is an interesting subject of conjecture. At any rate the question must embarrass him considerably, for if he endorse the amended report he will be uniting in a condemnation of the policy approved by Marquis Ito. It appears to us that the *Seiyun-kai* have kicked over the traces, and that no single hand is strong enough to pull them into line again.

There are predictions that the Ministry will resign immediately after settling the Manchurian problem, assuming that they can settle it satisfactorily. As to their successors, the *Shogyo Shimpō* says that the matter lies between Marquis Ito and Count Matsukata and that of the two the probabilities are in favour of the latter. The *Shogyo Shimpō* represents the views prevalent among business men.

Thursday, December 17.

Seventy representatives of forty journals assembled on the 15th instant at the Kogetsu restaurant in Karasumori-cho, Tokyo. This meeting had been talked of for some time, and inasmuch as its announced object was to discuss the situation, a very large gathering was expected, the press of the whole empire being invited to send representatives. In such circumstances the number, forty journals, can not be regarded as very considerable. It is explained, indeed, that had the Diet been in session a much larger attendance of press-men would have been witnessed, but the public will be disposed to view things as they are, not as they might have been. We observe, further, that the names of the journals which sent delegates are not made known, an omission from which it may fairly be inferred that few if any of the leading newspapers took part in the demonstration. The meeting unanimously adopted a resolution declaring that the Address to the Throne voted by the House of Representatives truly expressed the sentiment of the nation, and that the Cabinet, by dissolving the Lower Chamber and withholding the Address from the Sovereign, has been guilty of a grossly unconstitutional act. The representative of a Hamamatsu journal delivered a vehement speech, in which he declared that no one knew what had become of the Address; that it seemed to be wandering somewhere in space, and that its presentation to the Throne should be imperatively demanded. Other gentlemen also made addresses, but nothing is reported as to their purport.

Of course no one really doubts that the celebrated address reached his Majesty's hands without an hour's delay. It was not delivered in set form by the President of the House, but a copy of it was unquestionably in the Emperor's possession long before he pronounced the sentence of dissolution.

The *Koko* Club has addressed a petition to the Throne. Probably our readers are unacquainted with this institution. We also must plead similar ignorance until inquiries taught us that it consists chiefly of barristers and that the term *Koko* is used in the sense of "world." The petition is well composed. It sets out by observing that the Emperor of Japan has declared himself the guardian of Korea's independence

and that Manchuria is regarded as a place which must serve the part of a buffer state if the peace of the Orient is to be preserved. Nevertheless Russia has over-run Manchuria and is plainly extending her aggressions to Korea. Negotiations with reference to these incidents have been opened with St. Petersburg by Japan, but Russia, so far from showing any disposition to abandon her arbitrary ways, is steadily augmenting her forces in the East and consolidating her footing. It lies wholly within the Imperial Prerogative to determine questions of peace or war. Therefore the memorialists pray that his Majesty will direct the Ministers of the Crown to employ vigorously the means at their disposal for restoring the conditions essential to peace. The nation had hoped and believed that the largely increased forces of the Empire would have served as an effective guarantee of tranquillity, and the petitioners now pray that this hope may not be disappointed.

The petition bears the signatures of thirty barristers. It is the third document of the kind that has been presented to the Throne since the dissolution of the Lower House.

A hundred and twenty members of the Lower House met in the Maple Club on the 15th inst., and having listened to the reading of a manifesto, adopted it unanimously. This document declared that the course taken by the President of the Chamber in connexion with the Address to the Throne, had been not only lacking in respect towards the Sovereign, but also a flagrant violation of the regular procedure of the House and an unqualified injury to the country's interests, inasmuch as all semblance of dissension between the Cabinet and the people at such a juncture as the present could not but convey an injurious impression to the outside world. The House had not been given any due opportunity to discuss this grave measure; had not been asked to consider that the address proposed by the President on his own authority embodied an impeachment of the Ministry. The document had been pushed through in a moment of confusion and by means of a gross abuse of the President's official functions. As for the allegation that the President alone was responsible, no one with common sense could believe anything of the kind, and with regard to the course subsequently adopted, the Progressists, true to their usual custom, had welcomed the Address and decided to regard it as an expression of the House's opinion because it tallied with their own views, while the *Seiyun-kai*, by deciding to preserve the Address intact, had associated themselves with the unlawful procedure. Thus it had been impossible to obtain a reconsideration of the Address, and the responsibility for the dissolution rested on those who had initiated and assisted this affair. The Manifesto concluded by declaring that its 120 signatories had not obtained any opportunity to make known their views in the Diet.

Friday, December 18.

The *Seiyun-kai* show as much reluctance to attack Mr. Kono Hironaka as readiness to censure the Government. They have decided to exclude from their manifesto any declaration censuring the President's *coup d'état*, but to include in it an announcement that the Ministry's action in dissolving the Lower House because the latter exercised its constitutional privilege of addressing the Throne, was altogether inexcusable. Mr. Kono Hironaka, indeed, is not to escape

scot-free. Some censure of his conduct is to be published in the *Seiyu-kai-ho*, a periodical which serves as the organ of the Party. But if we may judge from the language employed in referring to this matter, it will be a very mild censure.

The fact is that none of the members dare go back to his constituency with a confession on his lips that he voted for an Address to the Throne without pausing to consider seriously what it contained, or, at any rate, on the mere hypothesis that it had received the approval of the Party's leaders. There is much greater safety in recourse to invective against the Government.

It is really curious to observe how publicists in Japan agree to keep the Sovereign out of every dispute. The party politicians are behaving in this particular instance as though the Emperor had neither will of his own nor judgment of his own; as if he blindly placed his authority at the disposal of any Ministry happening to be in office. Reverence may desire that His Majesty should be set above all every-day complications or political controversies, but how can this doctrine of the monarch's practical nonentity be reconciled with the conscience of true loyalty?

Somebody will be some day in a position, doubtless, to tell us who compiled the bomb-shell address. Mr. Kono Hironaka has taken the whole responsibility on his own shoulders. But those familiar with Mr. Kono allege that whatever may be his political capacities, his literary attainments do not extend to the composition of such a document. Somebody wrote it for him, these folks say. But who? All the men originally indicated have denied the least knowledge of the affair, and none of them is a person unworthy of credence.

Some Tokyo journals allege that Admiral Count Kabayama has emerged from his retirement and is urging Marquis Ito to form a Ministry, on the ground that the present Cabinet is not competent to deal with a situation so grave as that now confronting Japan.

DISSOLUTION OF THE DIET.

The House of Peers met on the 11th inst. at 9.30 a.m., and after receiving various reports, proceeded to elect a Chairman of Committee of the Whole. Out of 200 members present, 187 voted for Viscount Tani.

The House adopted an answer to the Speech from the Throne; an answer couched in the usual conventional terms.

On the motion of Marquis Kuroda seconded by Viscount Tani, the House unanimously adopted an address recognising the great services rendered to the House by Prince Konoye during his seven years of office, and expressing profound regret that impaired health had rendered him ineligible for re-appointment.

The House having elected the various standing committees, rose at 11.35 a.m.

The House of Representatives assembled at 1.10 p.m., but before any business could be commenced an Imperial Rescript was read ordering the dissolution of the House.

A telegram was received on Dec. 14th at Shimoposeki to the effect that the Osaka Shosen Kaisha's steamer *Koyo Maru* had sustained damage to her propeller shaft. She has arrived at Mokpho, Korea, for repairs.

KOREA.

Saturday, December 12.

Dr. Allen on his return to Seoul, is said to have presented to the Emperor of Korea an official document saying that His Majesty's promise to open Yong Am-pho had been welcomed by the American nation, and that it was hoped that so soon as the Chinese Government opened Antung, Korea would open Wiju also.

There was at first some doubt in Tokyo as to whether M. Pavlov and Admiral Starck had been received in audience or not, but it now appears beyond question that they were not received, the Emperor having become indisposed at the eleventh hour. M. Pavlov appears to have conveyed through a Chamberlain the purport of the communication he had to make, and it is expected that the audience will take place in a few days.

With regard to the application made by the French Representative in Seoul, on behalf of a French syndicate, for a mining concession near Pyong-yang, it is stated that the reply of the Korean Government has been unfavourable, on the ground that the mine in question forms part of the Imperial estate.

The acting Minister of Foreign Affairs is said to have submitted to a Council of Ministers a draft of the arrangements for the opening of Yong Am-pho.

Monday, December 14.

A report comes from Seoul that Li Keun-thaik, the supposed head of the pro-Russian party, has, in his capacity of Minister of War, concluded with M. Pavlov an agreement to the effect that in the event of trouble between Japan and Russia, Korea shall employ the services of Russian officers. Even the rates of pay are indicated, namely, 400 yen a month for staff officers, and 250 yen for officers of junior rank. Several Tokyo journals contain this rumour, and one of them, the *Hochi Shimbun*, says that the complement of Russian officers is to be two per battalion of Korean troops.

Of course in the unhappy event of war between Russia and Japan, neither State would attach any importance to agreements previously existing between them. But a covenant of the above nature made prior to that catastrophe, would be an unequivocal breach of the spirit of the conventions.

It is stated that the Korean Foreign Office has definitely applied to Japan for the extradition of Ko and No, the assassins of U Pon-som. There appears to have been considerable hesitation before taking this step; an utterly futile step of course.

There seems to be a dispute of some magnitude between Japanese and Korean labourers at Mokpo. We are not aware of a reason for the presence there of Japanese labourers in any number, nor have we any information as to the cause of the disturbance. What the telegrams dwell on is the impotence of the Korean local authorities to restore order, a state of affairs which has resulted in the despatch of the Japanese cruiser *Saiyen* from Chemulpo to the scene of the trouble.

Two Japanese subjects have been punished for violating the sanctity of foreign residences in Chemulpo on the occasion of the recent disturbance between Russian soldiers and Japanese civilians.

Tuesday, December 15.

The Korean Government, in reply to the remonstrances addressed to it by the Japanese Representative on the subject of the

nickel nuisance, is reported as saying that its preparations for the minting and issue of standard gold and silver pieces are nearly complete, and that nickels will then be relegated to the place of subsidiary coins having a definite exchangeable value. It is said that the Korean Authorities, with a view to carrying out this policy, have collected a sum of 1¼ million yen in gold and 1½ million yen in silver, but Japanese publicists naturally regard these amounts as ludicrously insufficient to serve the purpose of a national currency. This nickel question, that is to say, the question of Korea's monetary system in general, is likely to cause much trouble. She has neither Japan's opportunities, Japan's resolution, nor Japan's energy, and at present it passes comprehension to see how she can right herself. Recourse to foreign aid would seem inevitable, but in that event the Conventions dictate a line of procedure which would have little chance of success under present circumstances.

Wednesday, December 16.

The Korean Government has sent officials accompanied by a considerable force of constables to deal with the disturbance in Mokpo, and the cruiser *Saiyen* is to remain there until the trouble is settled. But we still remain in ignorance as to the nature of the affair.

Thursday, December 17.

The *Saiyen* is reported to have reached Mokpo and landed some marines to restore order. In connexion with this the *Domo Shimbun* publishes a strange item of intelligence, namely, that the Korean officials opened fire on the *Saiyen's* marines as well as on the refractory Korean coolies, the sequel of which act of war was that the Japanese police arrested some Korean police. A very remarkable incident, but too mixed to be intelligible and very probably turned upside down. The Korean Government has sent Mr. Yun Chi-ho to Mokpo in some official capacity connected with the disturbance.

CHINA.

Monday, December 14.

The intelligence is repeated that the Chinese Court seriously entertains the project of transferring the capital Hsiang in Shensi. It is alleged that secret instructions in that sense have been issued to the Governor of Shensi, who is ordered to put the palace there into a state of thorough repair and to organize troops sufficient for the purposes of imperial guard. We observe that by some of the English local papers in China it is suggested that China has made to Russia some territorial concessions in Mongolia and even in the metropolitan province, which render it almost imperative that the Court should be removed from Peking. Are such extreme hypotheses necessary to account for a proceeding explicable on the most natural grounds? The return of the Court to Peking in 1901 was of itself a most remarkable step; a step evidently dictated by considerations of due obligation. When the Emperor and Empress Dowager re-entered their capital on that occasion, they found it virtually garrisoned by foreign troops, and it is still so garrisoned. There are not many, if there be any, Occidental sovereigns who would remain permanently in a city thus circumstanced.

Wei Kwang-tou, Viceroy of the Two Kiang, is about to hold a naval review in the seas off Hai-mun island at the mouth of

the Yangtse. It is agreeable to learn that China possesses a navy worthy of review. A witty writer, compiling a metrical account of Li Hung-chang's interview with Lord Salisbury on the occasion of the Jubilee, made the old Viceroy say:—"I gather from a private source, that you possess some naval force."

Tuesday, December 15.

From Tientsin it is reported to the *Jiji Shimpō* that General Tieh Li, having received from the Court in Peking instructions couched in an unyielding sense, repaired to Tientsin to seek the advice of Viceroy Yuan, and was by him counselled that under no circumstances should attention be paid to the proposals of the French Minister in Peking.

Prince Ching is said to have consulted ex-Viceroy Chang Chi-tung as to the person best suited to take command of the troops now being organized for the defence of Peking. Chang's reply pointed to Wei Kwang-tou in the first instance and to Tsen Chun-hsian in the second, but as the latter can not leave his present post in the south owing to insurrectionary disturbances not yet quelled, and as Wei Kwang-tou can not be removed to Chili unless a Hunan man, or Chang himself, be available to take his place, this advice from the ex-Viceroy points to his own restoration to the viceroyalty of the two Kwang. Prince Ching is said to have listened in silence.

The Tsen Chun-hsian here mentioned is probably little known to the foreign public, but he seems to be coming to the front at the present crisis in his country's destinies, for he has memorialized the Throne to the effect that the Chinese Representative in St. Petersburg is a worthless official and ought to be speedily replaced. Could any Chinese Representative make a success in the Russian capital at present? Tsen, we may mention, is a son of the Viceroy Tsen Yu-ying. He served as Governor of Shensi and also of Shansi before appointment to his present post. Instructions are said to have been issued by the Chinese Court to the chief officers in Hunan, Szchuan and elsewhere to report at once what forces they can furnish for the protection of the capital in case of emergency and what view they take as to the sufficiency of such forces.

According to a report said to have been made to Peking by the Tartar General Tseng Chi, the forces under his command previously to the late occupation of Mukden by Russia, were disbanded at the dictation of the Russian commander, and are now scattered throughout the province, living by plunder, to the great danger and discomfort of the inhabitants. Tseng prays that the Russian Representative in Peking be approached with a view to the re-enrollment of these men, but it does not seem at all probable that Russia will sanction the reorganization of a corps which would be used against herself in case of emergency.

From all the above details and indirect references it would appear that Peking is really endeavouring to collect a strong body of troops for the defence of the metropolitan province. A rescript is also said to have been issued to the Viceroys and Governors of provinces, in the sense that as the Treasury in Peking is not at present in a condition to bear the expenses of these new levies, the various provincial treasuries must report at once what funds they can furnish for the purpose.

The Government in Peking is said to have conveyed to its Representative in Thibet

instructions that whereas British and Russian forces have entered Thibet, and whereas China's applications for their withdrawal remain unanswered, the people of Thibet should be warned to avoid every act tending to a breach of the peace, and in the event of an emergency communications should be opened with the Viceroy of Szchuan who, in turn, is to make the preservation of tranquillity a prime object of his procedure.

Wednesday, December 16.

The Governor of Sinkiang in Kansu reports to Peking that Russian soldiers have entered Ili. They allege that they have come only for the purpose of making surveys, but their preparations indicate an intention to remain permanently. The Russian soldiers are ubiquitous in Eastern Asia now-a-days. Or perhaps ubiquitous in the imagination of reporters.

The British Representative in Peking is said to be negotiating the Thibetan question with the Chinese Government.

Thursday, December 17.

It is stated from Peking that although the Chinese Government has definitely rejected the advances made by the French Representative in the nature of mediation, an official intimation of such rejection has not been forwarded in view of the fact that M. Dubail's action did not take an official form. Apparently it was nothing more than an attempt to discover whether friendly intervention would be acceptable.

PRIVATE THEATRICALS IN TOKYO.

Probably our readers do not know and would scarcely guess that nothing gives a journalist so much mental worry as to write a critique about private theatricals undertaken in the cause of charity. His pen is clogged by the obligation to be complimentary, and he offends his own sense of discrimination as well as the public's sense of justice by taking refuge in a string of *banalities* which can not even be called an appreciation, being in truth nothing better than conventional platitudes. It is thus a genuine relief to the critic when he has to speak of a performance deserving sincere admiration as did the acting at the residence of Viscount and Viscountess Aoki in Tokyo on the 12th instant. Within everybody's experience there have been instances of private theatricals when one felt ashamed and sorry for the actors and actresses, and few, very few, instances of private theatricals when the amateur element ceased altogether to be obtrusive and the audience enjoyed themselves thoroughly from start to finish. The performance on the 12th belonged essentially to the latter category. It commenced with "Petticoat Perfidy," a play clever enough in conception but so lacking in situations and episodes as to be mainly dependent on the acting. Baroness d'Anethan took the part of "Mrs. Mountrevor," Mrs. Marsh that of "Mrs. Norwood Jones," and Mrs. Barclay that of "Juliette." Baroness d'Anethan's capacities are well known and were never shown to greater advantage than on Saturday night. It was remarked that her facial "get up" seemed a little too emphatic, but nothing could mar her acting, which was at once powerful and refined. Mrs. Marsh (we believe) made her first appearance in Tokyo on this occasion. She showed delightful ease and was absolutely natural. It would have been hard to guess that either she or Baroness d'Anethan was not undergoing an actual experience

of "petticoat perfidy" instead of rehearsing a stage performance. Concerning Mrs. Barclay as "Juliette" we must frankly say that we have never seen a cleverer personification by any lady in the East. There were qualities that belong to a high range of expert performance; qualities of facial expression, of gesture, of elocution and of general style. In fact such a "Juliette" would have been a heart of bright colours in any setting—strong praise, perhaps, but thoroughly justified. To "Petticoat Perfidy" succeeded "A Pantomime Rehearsal." It kept the audience rippling with laughter from beginning to end, and though decidedly long never flagged for a moment. Mr. Horne personified "Deeds," the unhappy author of the "play." He is an actor ranking with Mr. Brady of Yokohama, quieter in style and not so space-requiring, but equally effective. His conception of "Deeds"—much the most onerous role in the piece, demanding his presence on the stage the whole time—delighted the audience, and since folks have been saying ever since that he is a "born actor," the quality of his work may be guessed without special description here. Colonel Hume took the part of "Lord Arthur Pomeroy." He has the gift of investing a rôle with excellent humour, which, being never in the smallest degree exaggerated, satisfies the difficult standard, complete concealment of art. Colonel Hume and Mr. Horne would ensure the success of any piece, and on this occasion their capital work was well supplemented by Mr. Royds, whose study of the inane society-man, "Captain Tom Robinson," was not only amusing but also consistent throughout, a result not at all easy to achieve and seldom achieved by amateurs, whose lack of training to sustain an effort generally betrays them into unevenness. The ladies in this piece occupy a very secondary place, which is a pity, for where such services as those of Mrs. Barclay ("Miss Lily") and Miss Aoki ("Lady Muriel Beauclerc") are available, their relegation to minor rôles disturbs the fitness of things. That, however, is the playwright's fault, but it limits us to saying that Mrs. Barclay brought down the house by her delightful dancing, and that Miss Aoki was, as usual, the very personification of grace and artlessness, which, for the purposes of this particular play, she supplemented by a pretty assumption of naivete that was at once winning and amusing. There were three wholly subordinate rôles, that of Miss Parrish ("Miss Violet"), who atoned for the pettiness of her part by a most charming presence; Mlle. d'Aiméida ("Miss May"), who faithfully abandoned herself to the idleness intended by the author; and Count Hatzfeldt ("Count Buxhoeveden"), who, having only to be thoroughly good-natured, found no difficulty in so appropriate an effort. The audience insisted on summoning, for a vehement expression of their gratitude, Sir Claude Macdonald, who had so well discharged the difficult duties of stage manager, and Mr. J. C. Conder who had painted the scenes with his usual skill, and had otherwise rendered the useful assistance to which Tokyo has been so often indebted.

The death of the Rt. Rev. James Addison Ingle, M.A., Bishop of Hankow, which took place on the 7th December at his residence, will cause deep sorrow not only in the Church to which he belonged, but also amongst his wide circle of friends in China and America. Bishop Ingle, says the *North China Daily News*, belonged to the American Church Mission, and came to China in 1891.

MONGOLIA.

Mr. Charles W. Barnaby writing in the *World's Work*, says:—

Although Mongolia has been a part of the Chinese empire for the greater part of the past two centuries, China has not exercised much authority over it, and the Mongol has been largely at liberty to follow his own desires in methods of government and conduct. The only tribute which has been heretofore required from the country has been a certain number of men to serve in the Chinese army, the tax usually demanded in such cases not being required. China's recent move toward making Mongolia a regular province of the empire is largely responsible for the demands made upon her by Russia last April, one of which was that the state of administration of Mongolia should remain unchanged. It is evident that in 1900 Russia, using the Boxer uprising as a pretext, put Mongolia under military control, and practically secured the whole of that vast country without firing a gun. It is not surprising under these circumstances that Russia should now object to China's proposal to change the administration of the affairs of Mongolia by making that country a regular province of the Chinese empire.

It is important to note here, that, in taking Mongolia, Russia also took at the same time a considerable strip of China proper. Russia considers that Mongolia extends to the Chinese Wall; and Russians in eastern Asia always designate the Great Wall as the boundary between China and Mongolia. They always speak of Kalgan, China, which is just within this wall, as being on the China-Mongolia frontier. I was told by several different Russians, as I was about to start for Peking, that when I passed through the gate in the Great Wall into Kalgan I would leave Mongolia and enter China. It is quite certain that Russia considers this wall as a "natural boundary." The fact of the case is, as will be seen by consulting a map, that the provinces of Shansi and Chihli, in northeastern China, extend from 100 to 250 miles past the Great Wall, and that Kansu, in northwestern China, also extends some distance north of the wall. The boundary only follows the wall for about 300 miles along the northern boundary of the province of Shen-se, near the centre of the northern boundary of China. There is no question but that Russia intends, when she arrives at the point of officially annexing Mongolia, to go clear to the Great Wall.

Russia has made numerous promises to remove her troops and restore Manchuria to China, but continually finds excuses for not doing so. First, they were to be removed as soon as peace was declared; when that time had passed, it was to be when the allied powers withdrew from China. She finally signed a treaty under which the troops were to be withdrawn in three instalments, October, 1902, and April, 1903, and October, 1903. In April, however, instead of withdrawing the troops as agreed, Russia made a number of demands on China, which should make it clear that she intends to stay. That Russia has got and intends to hold Manchuria and Mongolia there is not the slightest cause to doubt, while she unquestionably has Korea marked for early acquisition, having rescued it from Japan in 1895 for that express purpose.

We do not know what Mr. Barnaby means by saying that Russia rescued Korea from Japan in 1895, unless he entertains the view that had Japan remained in possession of Liaotung and the littoral of the Yellow Sea, she must ultimately have become mistress of Korea also. That is a theory held by many people.

Comment has often been made in these columns on the spectacle of the colossal empire building that Russia is now offering to the world. She has not yet laid aside the instrument which proved so useful in Manchuria, namely, the railway. A project is now seriously mooted to add a Western Chinese line to the Eastern Chinese. The new road would begin at Andijan in Russian Ferghana, and running through Osh, Kashgar, Aksu, Karashar, Turfan, Hami and Suchou, would have its terminus at Lanchow in Kansu, thus traversing a distance of over 1600 miles. Moreover, recent news from the Chinese capital indicates that a Russian syndicate is endeavouring to secure the concession for a line from Peking to Lanchow. That would mean—were the East-Chinese railway precedent followed—the ultimate addition not of Mongolia alone but also of the

Yellow-River region to the Russian empire. There is nothing novel in these things. The only novelty is the employment of such a civilized instrument of conquest as the railway. What hurts Russia's reputation is that modern conditions of communication condemn her to conduct these immense processes of aggression on a stage clearly visible to all the world. We are not accustomed to such spectacular effects. Our knowledge of them hitherto has been derived from hearsay only, the thing itself being hidden from our direct range of sight or seen only in faintest outlines. Hence there is great deal of shocked surprise, whereas in the dark lands of Africa sanguinary conquests of helpless people are effected all the time without disturbing the equanimity of any civilized audience. Indeed it must be admitted by every just student of the times that never previously in the history of nations, so far as we know it, was a great enterprise of empire-building conducted with so little display of violence and bloodshed. Russia is doing a huge work in the most dexterous and delicate manner, and could we lay aside our sympathies altogether, we should have to applaud her very frankly. The trouble is that she has been lavish of promises which she breaks with the utmost nonchalance. Probably if she were put upon her defence she would plead that without these promises fighting could not have been avoided, and that, after all, it is better to be a perjurer than a murderer. These are hard problems of morality; or, at least, they would be hard were not the whole business totally beyond the pale of morality; as much beyond it as are the killing and eating of animals for our daily food and the terribly cruel labours to which we condemn them for our daily convenience.

"EMILY BROWN" AGAIN.

The everlasting *Daily Mail* has got hold of the "Emily-Brown" story; rather late in the day, it must be admitted, but really the London sensation journal makes such a fine yarn out of the myth that our readers will find it diverting:—

The progress of Korea for twenty years and more has been through turbulence and strife, and in the last few chapters of its story we read of generals degraded for cowardice, of Ministers executed for treason, of courtiers banished and recalled, of the flight of the King and the murder of his queen, and of all the tragic and dramatic events that follow upon revolution. And amid it all there stands, the chief figure of interest yet enshrouded in mystery Emily Brown, once a singer in a chapel choir, at this moment Empress of Korea.

Even to this remote Pacific kingdom the American wife has found her way. New York was proud when the daughter of Mr. Leiter became, in New York's own phrase, "American Queen of India," and it was elated, we may be sure, when Edla Hensler married a King of Portugal and became an actual queen in Europe. But Emily Brown is the first American girl to become a real empress.

The story reminds one of another strange chapter of politics in the Pacific, of the notorious Shirley Baker who ran the kingdom of Tonga for his own amusement and profit, and gave up his missionary life to be Lord High Everything to King George I. But the father of Emily Brown had no dark history such as stained the reputation of the missionary "king" of Tonga. He was a devout and courageous missionary, the first Protestant to enter the Korean capital, where he had been sent by the Presbyterian Church in the States. Emily was his youthful daughter, and his zealous helper in the mission field. She led the singing in the mission chapel at Seoul, and it was thus that her beauty came to be reported to the King.

Kings have their own way in Korea, save when it happens that subjects have theirs, and it is not unnatural that when the King commanded the missionary's daughter to enter his household she should have been so captivated by the prospect that she could not resist. For a time, it is true, Miss Brown refused the royal invitation, but, having obtained the

King's promise of marriage at the earliest possible date, she yielded to pressure, left the mission church, entered the palace and is to-day the crowned wife of Yi Hi, who six years ago this week took the title of Emperor. Her son, if he live, and if his country keeps its sovereignty, will one day be Emperor of Korea, and for the first time in the history of the world the son of an American woman will be the crowned monarch of an empire. This is the age of emancipated woman, and the rulers of our little kingdoms are not behind. For the first time in Abyssinia a woman sits down at the Emperor's table, and for the first time in Korea a woman has been raised to the rank of her consort.

The coronation ceremony made "Lady Emily" Empress Om—"The Dawn of the Morning," as the native dictionary has it. One wonders if ever before an American girl has been the central figure in so picturesque a ceremony. Three great Powers were there, and it must have been a proud moment for the American Empress when she saw that two of them were England and the United States, with Japan at their side. At the close of the ceremony the new Empress rode by her husband's side through the streets of Seoul.

No detail that would add to the picturesque of the procession was lost. It has not yet been forgotten how the Emperor of Korea refused to see a British Consul who having packed up his uniform, called upon his Majesty in evening dress, and all the love of pomp which marks the Emperor's life was apparent at the coronation of his second wife. The houses of the capital were closed by royal decree and the people of Seoul knelt at their doors as the procession passed, a new broom in each hand marking their subjection to Yi Hi and the Empress Om. Two closed sedan chairs bore their Majesties' sacred persons through the streets, and above them waved a banner with a flying dragon fourteen feet long, and a red parasol indicating to the people that the monarch had shared his throne and power with his bride.

The installation of the Empress came about quietly, and to the surprise of those who read one day in the official "Gazette" that the ceremony was to mark the fortieth anniversary of the imperial accession. But "Lady Emily" had to wait upon tragic events before she could reap her promised inheritance. The women of the Korean Court have not lived easy lives, and the first wife of the Emperor came to an end which might have warned Emily Brown of the step she was taking. She had been omnipotent in the kingdom, and every corner of the palace, every street in Seoul, was watched by her spies.

It was said that she was too favourable to Russia, and there were other reasons why she should be hated; and one day twenty years ago, during trouble with Japan, the Empress disappeared, and Korea was ordered to go into mourning for twelve months. Then the "dead" Empress appeared again at Court, and it transpired that she had been smuggled from the palace disguised as a soldier's wife, another lady having been killed in her place. Back from the dead, she reigned for thirteen years beside her husband, until one tragic day there happened at Seoul the like of what has happened this year at Belgrade. Tai Won Kun, the father of the Emperor, a man with "bowels of iron and a heart of stone," stage-managed an assassination which carried off the Queen and drove the King once more to flight. When the crisis was over the King came back to Seoul, was quietly married to Emily Brown, assumed the title of Emperor, and early this year, on the fortieth anniversary of his accession, announced his marriage to his people.

No monarch in the world, Lord Curzon has said, influences its affairs less than the Emperor of Korea, but the American girl has a generous share of the pomps and vanities of kings. She lives in a palace four hundred years old, and might have not fallen from one of its ceilings and frightened Yi Hi. Five hundred guards protect her, two thousand retainers reside in the grounds, and just outside the royal residence is the entire standing army of the kingdom. She has probably forgotten that she once sang in the choir at the mission church, or that she came to Korea a simple girl of fifteen, but the memory may come back to her now, when the dogs of war seem likely to be let loose outside her kingdom. It will be scant consolation then, if the thunders of the war should reach Seoul, that for a little while she shared the life of a man who has been called "the most disconsolate living occupant of a throne."

This is a splendid mass of confused nonsense, much better fitted for the pages of the "Arabian Nights" than for the columns of a London journal. Who was the original romancer, we wonder. The Lady Om is undoubtedly a real person, but that her name means "the dawn of the morning" is just about as true as her identity with

"Emily Brown." It is also true that the Lady Om ought to be the Emperor's wife for the same reason that Dame Marjory ought to have been Simon's, but the whole tale of the coronation is the purest of inventions. We suspect, however, that Lady Om is not the only spark from which this sensational smoke has ascended. There is a story current about a Russian lady in Seoul, who, speaking Korean admirably, and having been an intimate friend of the late Queen, still has access to the Palace, and is often consulted by the Emperor, though it need scarcely be said, that she has no Dame-Marjory aspirations. Perhaps the American idealist who manufactured the "Emily-Brown" story, rolled Om and the Russian lady into one and supplemented the compound with the former's aspirations to be raised to the position of an honest woman at the time when the Emperor hopes to celebrate his jubilee, whenever that may be.

THE FINANCIAL QUESTION IN JAPAN.

The discussion of the protection problem by Japanese Chambers of Commerce is making slow progress. On the 15th instant the members of the investigation committees met in the rooms of the Tokyo Chamber, the Chambers represented being those of Nagasaki, Kobe, Kyoto, Sendai, Osaka, Hakata, Nagoya and Tokyo. The gist of the rules adopted was as follows:—

1. The several investigation committees should endeavour, as a matter of course, to stimulate the investigations of the Chambers in the districts with which they are connected and should observe all possible despatch in conducting their own investigations.
2. Each investigation committee should duly compile the results of its own investigations as well as those of the Chamber in the district with which it is connected, and should report these results to the other committees.
3. The several investigation committees, in accordance with the progress of their investigations, should open collective meetings to which the results of the examinations should be submitted, and by which they should be examined and discussed.
4. The place for holding these collective meetings should be fixed according to the nature of the facts to be discussed and in accordance with circumstances.
5. The points decided at a collective meeting of investigation committees should be reported by each committee on every occasion to the Chamber in the district with which it is connected.
6. The points decided at a collective meeting of investigation committees should be submitted to the next meeting of United Chambers, which should be invited to discuss them in detail. In the case of matters regarded as urgent, communications may at once be opened with the Government by decision of the investigation committee-men in session, or application may be made for a meeting of the United Chambers throughout the country.
7. Inasmuch as this problem is one which the Chambers of Commerce throughout the whole empire, acting in unison and unity, desire to solve so as impartially and prudently to protect and promote Japanese industries, each Chamber, as a matter of course, and each investigation committee shall take care to eschew individual action, and shall refrain from publishing any points that have not at least been discussed and decided at a collective meeting of investigation committees.
8. The expenses incurred by each investigation committee shall be borne by the investigation committees in common.

Having adopted the above rules—which we translate thus in detail to show our commercial readers the nature of the progress that is being made—the meeting decided that the following memorandum should be submitted to the Prime Minister and to the Ministers of State for Finance, Foreign Affairs, Agriculture and Commerce and Communications:—

"It being the general policy of the various States of Europe and America to protect industries, check

imports, increase exports and establish economic independence, we believe that the same course is most essential for our country also, in consideration of its present condition. No other was the purpose animating the Chambers of Commerce throughout the Empire when, definitely recognising the necessity of protection for industries, they appointed investigation committees which are to-day carrying on inquiries. Now unless officials and civilians unite their strength in approaching this matter of protection for industries, an altogether satisfactory result can scarcely be hoped for. Therefore this collective meeting of the several investigation committees has now been opened in Tokyo, has approached the discussion of this problem, and ventures to submit its desires as below, trusting that they will receive your Excellency's favourable attention:—

1. That for the purpose of studying the plan of protecting industries, the Government shall create a special examining machine, selecting for that purpose active men from among officials and civilians at large.
2. That if, in consequence of any requirements connected with the investigation of this problem by a Chamber of Commerce, application be made to a Minister or Consul abroad for the collection of materials, such application shall receive special treatment and shall be granted, and all facilities shall be afforded.

We believe that in the routine for accomplishing the object of protection for industries, the above two points call for speedy attention, and we respectfully beg that Your Excellency will recognise our object and extend favourable consideration to these wishes.

It will be seen from the above that the movement, though still in its initiatory stage, has taken tangible form.

AMATEUR THEATRICALS AND THE UNION JACK CLUB.

We would again call attention to the repeat performance in Yokohama on the 21st instant of the amateur theatricals which were given in Tokyo on the 12th. It would be a pity that Yokohama residents should not have an opportunity of enjoying this excellent and most amusing entertainment, and though no small trouble and inconvenience must be borne by the ladies and gentlemen who give their services, a sense of the pleasure they impart will doubtless repay them. That they will attract a large audience can not be questioned, more especially since, apart from the exceptional merits of the performance, the proceeds will be devoted to an object which must appeal to Britons, the Union Jack Club. We presume that many of our readers are familiar with the recently conceived plan of that institution. For the benefit of the rest, however, we may explain that the promoters of the Club—whose names make a long roll of Princes, Dukes, Marquises, Earls, Viscounts, Lords, Right Honourables, Barons, Knights, Admirals, Generals, and so forth—have conceived the idea of establishing in London, near Waterloo station, a club for non-commissioned officers and men of the British Army and Navy, whether stationed therein or visiting or passing through the city. It is calculated that some 200,000 men are included in this category, and there exists at present no organized means for providing them with amusements and accommodation such as a club would offer, the result being that great numbers are drawn away to haunts of a most undesirable nature. To carry out the scheme properly a sum of some sixty thousand pounds is needed, and though a great part has been raised, some is still wanting. It appears to us that for such a purpose every British subject should be willing to put his hand into his pocket, especially when the useful end his money ultimately serves is supplemented by a pleasure which in itself more than repays the outlay. We hope therefore that Monday evening will see a

bumper house, testifying Yokohama's appreciation of the men who achieved such a fine record in South Africa and North China, and of the Tokyo ladies and gentlemen who give their services in this good cause—and, be it observed with special gratitude, they are not all of our own nationality. We append here the speech of Sir Frederick Treves relating to the Club, to which we have already alluded:—

The war in South Africa has been a war of surprises, and amongst those surprises none has been greater than that which has surrounded the so-called "common soldier." Before the war began it was said that the race had so far deteriorated that we could never have men again such as those who took part in the battle of Alma, who stormed the Redan, who held the ridge at Delhi, and who ultimately stormed the City of Delhi itself. It was said that such men were drawn from the fields, and that now they are drawn from the great cities; that their present training was not calculated to develop the fighting man; that they had, in fact, deteriorated and had become too well educated, too socialistic, and too cautious of their well-being. Not one single word embodied in this cheerless forecast has come true.

Not only has the man in the ranks not deteriorated, but he has never shown himself in better mettle. This war has been the subject of a good deal of criticism. Officers have been criticised; departments have been criticised; methods have been criticised; and, in a great many instances, that criticism has been hostile; but not one word has had to be said in hostile criticism of the private soldier, and this is no vain boasting.

Throughout the whole of this war, with exceedingly few exceptions, the behaviour of the man in the ranks has been perfectly splendid, and many an engagement has been pulled through by the pluck and doggedness of the private soldier. To this man we, in England, owe the very deepest possible debt of gratitude. We are, no doubt, under deep obligations to Generals and to Commanding officers by the score, but the deepest possible obligation must rest with the men in the ranks. The debt which we owe to the man who fights for us we must make some attempt to repay; and I know of no more excellent way than that embodied in the scheme of the Union Jack Club.

The fine qualities of a man and his bad qualities start from the same basis. His love of good comradeship, his energy, his restlessness, his determination, his pugnacity, all count to his good as a fighting man; but they may all turn to ill account when he escapes from the monotony of long service or of barrack life and looks round for some means of recreation. He wants very little, he is easily amused, and he is not exacting.

What has been done for the man who is landed in London with his pocket full of pay and a world of public-houses around him? Are there many havens he can turn to but the public-houses?

What have those who profess to take a pride in their country and in the British soldier done to provide him, when out of barracks, not with luxuries or surroundings that will pamper him, but with the common comforts of home and the ordinary means of enjoyment?

I am quite certain that such a Club as has been discussed, if it can be established, will do a great deal to meet this lack in the soldier's life. To provide it would be to attempt to repay to the British soldier that debt which his fine service to his country has imposed upon us all. It is very little to ask. It is only that he may have a respectable Club to go to when on leave or when passing through the Metropolis; a place where he may deposit his kit and his valuables, where he may obtain a decent meal, where he may meet his friends, and where he may feel that he is under the roof of a kindlier host than the tavern-keeper, and is really at home.

THEATRICAL PERFORMANCE IN AID OF THE KUMAMOTO LEPER HOSPITAL.

A crowded house viewed with evident pleasure the theatrical performance given by the Kawakami troupe in Tokyo on the 16th instant in aid of the Kumamoto Leper Hospital. There were two pieces, the court scene and the final scene from the "Merchant of Venice" and "Little Fred and his Fiddle." We do not propose to offer any criticism of the performance. What we had to say about Kawakami and Sada Yakko in their playing of Shakespearian adaptations, we said when "Othello" was put

upon the Tokyo stage, and since it would be necessary in connexion with the "Merchant of Venice" and "Hamlet" to greatly modify the praises we were then justified in offering, we take refuge in silence. But on behalf of whatever section of the public we represent we can most unequivocally tender thanks to Kawakami, Sada Yakko and their assistants for the great generosity they have showed in giving their services gratuitously in the cause of charity. A very handsome sum must have been realized, and we heartily congratulate Miss Riddell and the other kind-hearted people who have worked with her on behalf of the unhappy lepers. Appended is the programme of the performance:—

THE MERCHANT OF VENICE.
COURT OF JUSTICE.
AVENUE TO PORTIA'S HOUSE.

The Duke of Venice.....Nobuchika Nakano.
PortiaSada Yakko Kawakami.
Nerissa.....Gekka Morizumi.
Antonio.....Iwanosuke Fujikawa.
BassanioKaichi Yamamoto.
Gratiano.....Heijiro Isono.
Shylock.....Otojiro Kawakami.
Officer of the court of justice.....Teijiro Takanami.

LITTLE FRED AND HIS FIDDLE.

Little FredSada Yakko Kawakami.
Spirit in the form of a beggar child
.....Teijiro Takanami.
Spirit in the form of an old beggar woman.....
.....Kichinosuke Momoki.
Spirit in the form of an old beggar.....Gekka Morizumi.
Kenzo Fukano, a miser.....Nobuchika Nakano.
Nawao Kemmochi, a constable.....Iwanosuke Fujisawa.
Guards, guests and servants of the inn.

DARING SWINDLES.

We wish to put the commercial community of Yokohama on their guard against some daring swindler, or swindlers, now operating in our midst. It appears that the other day a cheque for a small sum—below forty yen—was drawn on the Russo-Chinese Bank by a foreign firm and handed over to a Japanese. This cheque was taken to the Bank by a Japanese who asked for payment. The comprador seeing that it was "Pay Cash" and that the sum ran into the thousands had his suspicions aroused and asked the presenter to step forward and see the Assistant Manager. But the man was scared and incontinently fled. At that very moment the Bank was rung up over the telephone and an unknown voice was heard asking whether this particular cheque had been paid. An answer was given that it "was being paid; wait a moment." The Bank immediately rang up the police and by smart work on their part the unknown telephone-questioner was actually caught at the telephone still in the act of listening for the Bank's definite answer. Subsequent investigations showed that the cheque had been treated with chemicals and then re-written so far as the figures and the amount were concerned. The signature was not tampered with.

A second case came to our notice yesterday. A well-known figure in local business circles gave a cheque drawn on a Japanese bank for an amount not exceeding ¥35 to a dealer in the Motomachi. On looking up his pass-book a day or so afterwards he was astonished to find that he had been debited on account of this particular cheque with a sum of over yen 2,000. Enquiries were at once made, the cheque looked up and examined, when it was found that the original writing—all, save the signature—had been erased by the use of chemicals and then the cheque rewritten! The matter is in the hands of the police.

A MAGNETIC MYSTERY.

The last day of October will long be remembered among telegraphic operators in Western Europe and North America, for from about nine in the morning until nearly sunset, without any apparent explanation, the wires suddenly ceased to work, and France, many parts of England, Scotland and Ireland, and the northern portion of the United States were shut out from telegraphic communication not only with other countries, but with themselves. It was quite impossible to dispatch messages from Paris to America, Spain, Portugal, Italy, Algeria, or Tunis, and only with the greatest difficulty could the English operators carry on their work. In parts of North America the magnetic disturbance affected the great cable lines for a time, the telegraph wires in all directions from Chicago felt the effect, in some localities causing a total cessation of business; and the long-distance telephones were similarly troubled, and traffic was entirely suspended at times. The disturbance lasted eight hours, and at its climax there were 675 volts of electricity—enough to kill a man—in the wires, without any batteries being connected to them. Remarkable auroral beams flashed in the northern sky early in the morning, making a dazzling display of light and colour. The aurora was first seen in New York at two o'clock in the morning, and it had faded away at four, but the strange spirit in the wires could not be quieted until many hours later. Naturally the newspapers sought an explanation from the leading men of science, and Sir Oliver Lodge, Principal of the University of Birmingham, interviewed by the correspondent of the *Daily Mail*, said: "The fact is that there are evident signs of great eruptions and disturbances going on in the sun. There are some very large sun-spots now, and surrounding each there are indications that a mass of gas, calcium, hydrogen, and other vapours has been thrown up and has spread over an area compared with which Europe is a mere speck, an area, in fact several thousand times the size of the continent, each spot itself being as big as the earth. One effect is the emission of electrified particles such as we know in the laboratory as cathode rays, the same kind of rays being among those emitted by radium. These electrified particles, shot out from the sun, travelling at enormous speed, constitute an electric current of considerable strength. And if they pass near the earth they are quite likely to introduce telegraphic, magnetic, and other disturbances. Where they penetrate the earth's atmosphere they give rise to the aurora borealis." Sir Norman Lockyer, who was also interviewed, observed that these incidents had been known to occur about every ten years ever since telegraphs were invented.

NOTES ON CURRENT EVENTS.

It appears that this world of ours has lost many things and is losing others. It has lost a great number of animals and reptiles which were most interesting and even appalling creatures, and it has lost the giants that divided the dominion of the earth with those now fossilized monsters. From time to time news is sent out of the discovery of an addition to the extinct family, and sometimes scientific folks find living specimens of creatures previously known by their bones only. The latter is

the case with a relative of the giraffe, the *Ohiphi*, recently encountered in Central Africa, and there is now talk of the possibility of meeting a living representative of the Neomylodon in Patagonia. This is supposed to be the Hymnché, described by the Indians of Patagonia, in whom it is said to inspire a superstitious terror. Thus far nothing has been seen of the Hymnché except a brown-furred head which emerged from a stream as a French naturalist was walking along the bank. But we shall probably hear more of it. Naturally in this context the question suggests itself, what, if anything, is the world now losing, or has the process of loss been arrested? Certainly it is losing the American Indians. For example, we read in *The Commoner* that the Kickapoo Indians, who once ruled over a large section of the Missouri Valley and numbered seventy thousand, have now dwindled to seven hundred. This scanty remnant, finding the civilization of the United States fatal to their existence, have taken refuge in a valley in the Mexican state of Conhulla. We can afford to do without the Indians, perhaps, but our rivers are another question, and it is now suggested that these are drying up. The matter is discussed by Mr. Guilbert in *Cosmos*. In Normandy, he says, numerous beds of extinct rivers have been found, and elsewhere several streams are proved to have dwindled in dimensions. His explanation of the phenomenon is that the sources of atmospheric humidity have been reduced by continued deforestation, by the drainage of marshes and by the canalization of water-courses which have been going on steadily since the days of Rome's greatness. Some geologists suggest, however, that a drying up has been produced by cracks in the ground, chiefly in the Jurassic strata. Whatever be the reason, the rivers are growing smaller. After all, Horace's picture of a perennial fool is not so true as has hitherto been supposed.

We observe that Mr. J. Blackmore, who spent so many years in Kobe, is still pursuing in the papers in England his campaign against the Japanese cannon now exhibited in a public place at Southsea. Recently he wrote to the *Japan Mail* on the subject and his letter was copied in the Portsmouth papers, with the result that several correspondents took the field. In answer to them Mr. Blackmore wrote the following to the *Evening News* of Portsmouth:—

Sir,—There seems to be an inclination, on the part of correspondents in the local Press, to obscure issues by casting a glamour of romance around the Shimonoeki cannon on Southsea Esplanade. It is not a question of a mistaken inscription, nor of Victoria Crosses, nor of facing the mouth of an enemy's cannon, nor of the fact that our late beloved Queen—ill-advisedly, I think—presented it to the Borough of Portsmouth. The question is, should the cannon have been treated as a trophy, that is to say, something gained by conquest, to flout in the face of a high-spirited and patriotic people? Let Portsmouth judge!

The incontrovertible fact is that the losses sustained by the combined international fleet, some twenty ships in number, engaged in the operation of dismantling the feudal Prince of Choshu's Shimonoeki forts were not in excess of the casualties that frequently occur at an Aldershot field-day. And then the brave Choshu men, accepting the inevitable, invited on shore to an entertainment their whilom assailants, and, what's more, the invitation was accepted by a portion of our fleet. Why should we be less generous? A very large percentage of Japanese naval officers are Choshu men, and they, when the Japanese fleet recently visited Portsmouth, estimated Southsea's show cannon at its true value. If iron could blush, the *Victory's* anchor would turn scarlet to the flukes to find itself in such companionship.

The miscreant who attempted to inveigle Bishop Nicolai into purchasing secret in-

formation, and who was immediately reported by the Bishop to the police, has been remanded for public trial on a charge of attempting to obtain money by false pretences.

The 1st of March has been officially fixed as the date of the next general elections.

Mrs. Griscom left Tokyo by the 11.30 a.m. train on the 12th instant, and it is hoped that she will be able to return to Japan by April next. A large number of persons attended at Shinbashi to say farewell. Among them were the Belgian Minister and Madame la Baronne d'Anethan, Baron and Baroness H. Iwasaki, the Spanish Minister, the Brazilian Chargé d'Affaires, Madame la Baronne Corvisart, the Vice-Minister of Foreign Affairs, Mr. H. Wilson, Mr. H. W. Denison, Mr. and Mrs. Miller, Captain Brinkley, &c. Mrs. Griscom left Yokohama by the *Siberia* and a large number of residents assembled to see her off.

The *Nippon* has been condemned to pay a fine of 20 yen for each of the incendiary poems published by it on the 10th and the 23rd of November respectively. What a penalty for the crime of inciting to murder!!!

One reason for the recent activity of American life insurance companies in the New York bond investment market is given as the small net returns from their holdings in real estate, says *Bradstreets*. Very recently one company alone placed \$1,250,000 in various high-grade 3½s. and in several directions evidences of heavy buying by life insurance companies are to be found. A late issue of the *Spectator* contains an interesting article on the real estate investments of life insurance companies. After recounting the restrictions which govern this class of investments, it is shown that all but four companies operating in the state of New York own real estate aggregating in value more than \$166,000,000, or slightly over 8 per cent. of the total assets. The percentage of gross return on the investment and also the net return after deducting the sums paid out for taxes, repairs and expenses, show some astonishing figures. Thirty-four companies are grouped, and while their real estate investments last year earned 5.56 per cent., the net return was only 2.20 per cent. Four companies netted more than 4 per cent., four others more than 3 per cent., while ten netted less than 2 per cent. The location of these investments is in thirty-nine of the United States and \$18,000,000 is in foreign countries. Among the states New York leads with \$74,520,773, or 46 per cent. New Jersey, Minnesota, Missouri, Massachusetts, Pennsylvania, Illinois, Colorado and Connecticut follow in the order named. As long as taxes, repairs and expenses continue to consume such a large proportion of the gross receipts it is concluded that life insurance companies will not find permanent real estate investments particularly profitable. Hence the tendency to divert the money to such bonds as are specified by law.

The *Electrical Review* of New York lays before its readers an explanation which ought to be made familiar to every person, Occidental or Oriental, that uses an electric car, and which we commend to the notice of Japanese journals in view of the growth of electric railways in this country. It may at any moment be the experience of passengers in a car to hear a report and see smoke, and it may easily follow that in their alarm they precipitate themselves

from a vehicle which, as they imagine, threatens to become a death-trap. But the truth is that the detonation and the smoke signify simply that a contrivance to assure safety has come into active operation. That contrivance is a safety fuse. When a motor stands still the current flowing through it quickly exceeds the motor's powers of endurance, and were this current allowed to continue, it would produce dangerous results. To prevent anything of that kind there is introduced a short piece of wire of such dimensions as to be melted by any current which threatens to develop damaging power. The melting of the fuse opens the circuit, and cuts off the current from the motor. Technically speaking the fuse is said to "blow," but to those unacquainted with the device the resulting phenomena are apt to be very alarming.

The nominal roll of members of the Japan Society now makes a volume of 79 pages, and as, roughly speaking, each page contains an average of 17 names, the total membership is about 1350. Looking through these pages one quickly abandons the old conviction that Japan and her affairs are little studied and awaken little interest in England. It is not merely that we find among the members people like Beerbohm Tree, Mrs. Campbell Praed, Sir Walter Phillimore, the Archduke Joseph of Austria, and so on, whose connexions with Japan are difficult to trace, but it is that innumerable persons equally strangers to us figure there, and that they represent almost every profession and occupation. The Society is now a great institution and seems to grow greater all the while.

It is very interesting to observe that methods which have been practised for centuries in Japan with disastrous results, are practised in America also to-day, and seem to have the approval of many practical men there. There is a body of persons called the "Inter-state Mississippi River Improvement and Levee Association." In response to the invitation of this Association fifteen hundred delegates representing twenty-four States recently assembled in New Orleans. They appear to have come to the conclusion that the levee system adopted along the Mississippi should be continued and perfected, and should be regarded as a public work in which the whole nation, not merely individual states, are vitally interested. Levees are banks built along the course of a river with the object of narrowing the channel and producing a deep water way with a swift current. They do indeed accomplish that end, but it is at the expense of gradually raising the bed of the river. American engineers are aware of the latter fact, it need surely be said. They reason that when a river is forbidden to deposit on areas beyond its banks some part of the sediment carried down by its waters, then, since it can not carry all that sediment to the sea, its bed must receive gradual accumulations of matter. That is precisely what has happened to many Japanese rivers. Dykes built to restrain their floods, have gradually caused deposits on the bed, and *pari passu* the height of the dykes has been raised, until in fine the rivers are flowing in troughs elevated several feet above the level of the surrounding districts. Of course there are remedial measures, and doubtless they will be adopted in the United States, but it would seem that this side of the question has not presented itself to the great majority of the publicists discussing the problem.

The *Dempo Shinbun* offers itself to the reading public of the capital for the sum of 10 sen monthly, which is a price of one-twelfth of a farthing per number. Certainly that is a record. One can scarcely believe that it will pay. A sale of a hundred thousand copies would give a daily income of only 334 yen.

The graduation ceremony took place at the Edajima Naval College on the 14th instant, H.I.H. Prince Higashi-Fushimi represented the Sovereign. There were 103 graduates, 3 of whom attained special distinction and were rewarded by prizes from the Emperor.

There has reached us a complaint with which we strongly sympathise. It must be universally admitted that the existence of dry-docks in Yokohama harbour is a very great convenience to ships using the port. The absence of such accommodation was for many years a serious drawback, and the enterprise, once established, unquestionably deserves the sympathy and support of the Port Authorities. It would seem, however, that the Port Authorities do not share that view. The Dock Company is said to be suffering very serious inconvenience and even loss owing to the want of a deep-water channel from the anchorage to the entrance of the Docks. The Harbour Authorities possess some very powerful dredging plant, and it would be a comparatively small matter for them to dredge out such a channel. But our information goes to show that the dredger is kept at work anywhere rather than at the desired channel, and that all applications have hitherto failed to correct this state of affairs. There may be good reasons on the side of the Port Officials, but we cannot find that such reasons are understood. Should Japan unhappily become engaged in war, it could scarcely fail to be of great importance that heavy ships should find access to these dry-docks for purposes of repairs, since all the Government docks would be fully occupied. Apart from that, too, there is the undeniable principle that men who have invested capital in works of national importance, such as dry-docks and ship-building yards, are justly entitled to the support of the Authorities within certain limits. To unconcerned outsiders the situation seems curious.

After all that has been said and written the upshot of the matter seems to be that among the orbs in the firmament there is not one fitted to be the home of beings like ourselves—that is to say, of course, among the stars whose condition we are at all capable of discerning. The Sun and Mercury are out of the question, for even on the visible surface of the former iron can exist only as a gas, and the state of affairs on the latter is little less unfavourable for folks to whom a temperature of 200° is fatal. Venus, long credited with possible attributes of a human home, seems—so the latest observers say—to have no alternative of either day and night, since she keeps one side always turned towards the sun, which side, consequently, must be burning hot and absolutely without moisture, while the other side must be always enveloped in a mixture of ice and solidified atmospheric gases. As for Mars, it is too small to have any potential store of latent heat and it receives comparatively little caloric from the Sun, while the force of gravity is so small there that the planet must have a tenuous and almost cloudless atmosphere, one

effect of which is to cause great loss of heat by radiation. Apparently then, to live on Mars would be like living on the highest peak of the Himalayas, only worse. The moon with its half month of sunshine and half month of darkness is out of the question, and as for the four great outer planets, the two nearest to us have an atmosphere through which no glimpse of their surface has ever been obtained, and the two farthest are equally unknown, but in no one of them is it conceivable that pigny creatures like ourselves could live, move and have our being. What is to be said, however, of a different and much higher order of creatures. "If," says Mr. F. L. Allen, "different conditions can awaken a capacity for exalted energy traffic among other elements than those of which human life is essentially a function, then the universe seems to provide immense possibilities of life whose variety and magnificence may far exceed anything that we can imagine." M. Metchnikoff describes man as "a kind of miscarriage of an ape, endowed with profound intelligence and capable of great progress." If that be all that can be said for us, then indeed it is hard to believe that we alone represent the intellectual inhabitants of the stupendous system of worlds in which our planet forms such a puny speck. But if, on the other hand, space contains orbs peopled by beings belonging to an order that transcends all our powers of imagination, then who shall say that our beliefs in the potentialities of the future should be limited by the petty rules and measures applicable to our corner of space?

In view of two recent paragraphs printed in these columns, the following extract from the literary letter which Mr. Clement K. Shorter contributes every week as Editor of *The Sphere*, is, we think, interesting:—

Every reader of *The Sphere* is one of Mr. Zangwill's well-wishers in his forthcoming marriage. Miss Ayrton, who is shortly to become Mrs. Israel Zangwill, is not, as some of the paragraphs on the subject might have led us to infer, a Jewess; she has not, in fact, a drop of Jewish blood in her veins, the mistake having arisen from the fact that Professor Ayrton, her father, married a second time. The first Mrs. Ayrton, the mother of the future Mrs. Zangwill, was an interesting woman. She was a doctor who took high honours in the medical examinations and wrote as well as illustrated a popular book, *Child Life in Japan*. The present Mrs. Ayrton, the stepmother of Mr. Zangwill's future wife, is a Jewess, and it is said that George Eliot modelled Mira in *Daniel Deronda* upon her. One of her cousins was the late Numa Harcourt, the only Jewish senior wrangler, and another cousin married Arsène Darmesteter, the eminent French lexicographer, whose brother—the late James Darmesteter—was the first husband of the English poet, A. Mary F. Robinson. This does not complete the literary and scientific interests of the family, for Professor Ayrton is himself an accomplished electrician, a member of the Royal Society, and so on, and one of his uncles was the once-famous Mr. Acton Smee Ayrton, a member of one of Mr. Gladstone's Cabinets, who got into much trouble with the public when he was First Commissioner of Works.

On Sunday last an interesting match of tennis was played in Tokyo between Messrs. Barclay and Chapman representing the capital and Messrs. P. A. Cox and Van Cleve representing Yokohama. There was some very fine play, Mr. Cox's vollying at the net being particularly remarkable. The Yokohama men were probably handicapped to some extent by the novelty of the ground. They lost the two first sets without much of a fight and won the two next after a hard tussle. The fifth went to Tokyo, Mr. Barclay's deadly accuracy and great power of recovery proving invincible.

The Ex-Grand Vizier of Persia, Mirza Ali Asghar Khan, with a suite of six,

among whom are his son and two—or, according to some accounts, three—Ministers of the Crown, is now in Tokyo at the Imperial Hotel. Interviewed by a representative of the *Hochi Shimbun* one of the Grand Vizier's suite made a statement the gist of which is that the party has come to Japan to observe the country's conditions in relation to its progressive policy. The Grand Vizier will have his headquarters in Tokyo until January 6th, making visits meanwhile to Nikko and other places.

We take this startling paragraph from the *Vancouver News Advertiser*:—

The Hydrographic Office at Washington has given notice of the discovery of a great danger to navigation in the Pacific. This consists of a rock about 40 to 50 feet high and five to six times as long, east and west, in latitude 32 44 north, longitude 139 41 east.

It is impossible to avoid the conclusion that some misprint has vitiated the above figures. The position given is roughly half way between San Francisco and Honolulu in a direct line,—and practically in the path of all ships at all seasons. Is it credible that a danger of such a character could be undiscovered till now?

We take the following from the *Nagasaki Press*:—

The fine new vessel for the Nippon Yusen Kaisha, the *Nikko Maru*, was taken out for a trial trip on Thursday with results which are at once a credit to her builders, the Mitsui Bishi Co. and a source of satisfaction to her owners. The speed she attained over the measured mile was 17.76 knots, and this was easily maintained. The *Nikko Maru* will be formally handed over to the Nippon Yusen Kaisha about the end of this month, and will be taken up to Yokohama. From that port she will make her maiden trip to Australia, sailing about the middle of January. The fitting of the vessel is proceeding apace.

FIRES.

Owing to a defect in an electric light wire, fire occurred on the night of Dec. 9th in a house at Uchi-Ando-ji-cho, Osaka. It was extinguished before it could extend to the whole building.

The steamer *Taitai Maru*, of the Osaka Shosen Kaisha, took fire while on her way from Hankow to Shanghai. Two hundred bales of cotton were thrown into the sea before the flames were put out.

Early on the morning of Dec. 10th, fire broke out in an unoccupied house at Oshima-cho, Fukagawa, Tokyo, destroying five buildings and damaging three others. About the same time, another fire occurred at the office of the Tokyo Shogyo Koshin-jo (Commercial Trustee Association), Nihonbashi. It was put out before the whole building was affected.

On the evening of Dec. 14th, fire occurred at Senzoku-machi, Asakusa, Tokyo, destroying a house.

Fire broke out on the morning of Dec. 15th at Utsunomiya destroying 21 buildings including the well-known hot spring bath-house, Takase. The cause is reported to be fire left in the kitchen.

On the night of Dec. 14th, fire occurred at the district of Nasu, near Utsunomiya. Owing to the strong westerly wind that prevailed, the flames extended immediately, burning down finally 35 houses. The cause is not known.

The fire-fiend is busy in Yokohama these days. One fire occurred on Dec. 15th at 6.30 p.m. at Masago-cho, Sancho-me destroying one house and damaging another. Two hours later another fire broke out at Furo-cho, Sancho-me, and in this case burnt down three houses and two sheds. A child was killed. A third took place on the following morning about 5 o'clock at Kotobuki-cho. One building, which consisted

of six dwellings, was destroyed. Two firemen were injured. In none of these three cases is the cause known, but the police believe it to be carelessness. Another outbreak occurred on Wednesday at 2.50 p.m. in an unoccupied house, at Tsukioka-cho, Sancho-me, Ota. The house alone, was destroyed. The Tobe police believe incendiarism to be the cause.

On the night of Dec. 15th fire broke out in the engine department of the Tokyo-Yokohama Electric Railway Company, at Kawasaki, causing damage to the machinery, which is estimated at about yen 10,000. The traffic is suspended for two weeks, in which time repairs are expected to be completed.

Another outbreak took place on the same night at Toyoshima-cho, Yokosuka. Five houses were destroyed. Negligence is reported to be the cause.

THE SPEED OF STEAMSHIPS.

The recent speed and power trials of H.M.S. *Cumberland* supply some instructive object-lessons on the speed question which should prove exceedingly interesting to steamship owners. This vessel has been built by the London and Glasgow Engineering and Iron-Shipbuilding Company, and was designed to attain a sea speed of 23 knots, and this she succeeded in exceeding by over half a knot, a fact which reflects very creditably upon the builders who also engined her. The dimensions of this armoured cruiser of the County class are as follows:—

Length.....	440 ft.
Beam	66 ft.
Draught	24 ft. 6 in.
Displacement.....	9,800 tons

The boilers number 31 and are of the Belleville type, and the engines are triple-expansion with four cylinders, and are designed to run at a speed of 140 revolutions, the diameter of the cylinders being 37 in., 60 in. and 69 in. for each of the two low pressure cylinders. The trials, which were run on the Clyde during August and September, consisted of a 30 hours test at one-fifth power; 30 hours steaming at eight-elevenths of the power; and 8 hours at full power. The ship was practically down one foot by the stern, and the steam pressure ranged from 240 lbs. to 296 lbs. per square inch. During the trials the water consumed was replaced by the evaporators, the coal used for this purpose being reckoned with the total consumption. To take the case of the one-fifth power trial first. The speed attained was 15.241 knots; and the indicated horse-power developed, 4,913; the coal consumption 2.1 lbs. per i.h.p. per hour. On the 30 hours trial at eight-elevenths power, the speed was 22.138 knots, the indicated horse-power 16,452, and the coal consumption per i.h.p. per hour 1.98 lbs.; while on the 8 hours full power trial the figures were; speed 23.7 knots; i.h.p. 22,769; and coal consumption 2.01 lbs. Comparing these results on the basis of a day's steaming, and reckoning 2,240 lbs. to the ton, we have the following:

Speed. Knots.	Indicated horse- power.	Coal consumption. Tons.
15.241	4,913	110
22.138	16,452	350
23.700	22,769	490

Thus, to increase the speed from 15.241 knots by 6.897 knots required an augmented coal consumption per 24 hours of 240 tons, while to increase the speed by a further 1.562 knots meant the consumption of an additional 140 tons of coal; or, to put it in another way, to increase the speed by a little over 50 per cent. required a coal consumption over 400 per cent. greater. Clearly, therefore, in matters of speed, it is the last, and not the first, knot which costs, and it is small wonder that the speed problems which the Cunard Company have to face in their forthcoming leviathans are causing much study and very considerable anxiety.—*Syren and Shipping.*

THE CRISIS IN JAPAN.

THE incidents connected with the adoption of the Lower House's Reply to the Speech from the Throne seem to have been very extraordinary. Probably the foreign public are not familiar with the procedure usually followed in these matters, and since without such knowledge the affair can not be understood, a word of explanation is necessary. In the opening sessions of the Diet, the Speech from the Throne and the House's Reply were regarded as matters of great importance, and the tendency was to make them a subject of serious debate as is the case in England. In accordance with that idea printed copies of the proposed Reply were always circulated among the members, a method adopted in the case of bills in general, and the House's opinion was thereafter deliberately sought. But this plan appears to have been found contrary to the spirit of the somewhat exceptional relations existing between the Japanese people and the Throne. The members, without any declared expression of views in that sense, fell into a habit of treating the Speech and the Reply as mere formalities, and by and by they dispensed with even the precaution of requiring copies of the Reply to be placed in their hands by way of preface to its presentation to the Throne. Thus of late years the habit has been this:—The Emperor makes his Speech; the House meets; the President reads a draft Reply prepared by himself in conjunction with the Chief Secretary, or by the Chief Secretary alone; the House approves the draft as a matter of course, and there the matter ends. It will be evident that in this somewhat loose manner of dealing with the matter an opportunity offers for a political coup, and the new President, Mr. KONO HIRONAKA, acting in concert with a few fellow-thinkers whose names are variously stated, seems to have seized this opportunity. When the House met on the 10th instant after hearing the Speech from the Throne, the Chief Secretary, Mr. HAYASHIDA, handed to the President a Reply drafted in the usual conventional terms. But the President, instead of reading aloud the Secretary's draft, took from his own pocket another document, and brushing aside some feeble inquiries made by the Secretary, who, of course, was not in a position to object seriously, read the contents in a loud voice. It is doubtful whether all the members understood accurately what was being read. But the general purport must have been quite plain to them, and on perusing the document carefully we are bound to say that no educated Japanese hearing its contents audibly read even under the circumstances of last Thursday, could have appreciably misinterpreted their meaning. Obscurity might have existed about certain points, but there could be no ambiguity about such phrases as *kakushin no shisetsu kore ni tomonawazu, naisei wa biho wo koto to shi, gwaiko wa kigi wo shisshi* (the measures of

the Ministers are not in keeping with the situation; at home they pursue a policy of opportunism; abroad they forfeit opportunities). The members, then, with perhaps some rare exceptions, knew very well what they were asked to approve. But what they do not appear to have known or appreciated was the character of Mr. KONO HIRONAKA. The *Seiyu-kai*, as we have frequently pointed out, were not disposed to impeach the Cabinet's foreign policy; they had many and cogent reasons for not doing anything of the kind. But when they heard the draft Reply read, they seem to have jumped to the singular conclusion that it had been duly debated by their leaders and had already received approval at the hands of the Committees. It never occurred to them to divine the truth, namely, that Mr. KONO HIRONAKA was asking them to be parties to a transaction planned by himself and a few kindred spirits without the cognizance or consent of any of the responsible party leaders. Of course Mr. KONO acted strictly within the limit of his functions as President of the House. He had entire competence to propose any form of Reply whatever, and the evidence is that he twice asked the House whether any member dissented. It may be urged that in a matter of such vital importance he should have reverted to the original practice of circulating among the members copies of the draft. Certainly he ought. That would have been the straight-forward and sincere course. But the other route was open to him and he took it. He can not be impeached for irregularity, and if it was his purpose to create an imbroglio, he has succeeded admirably. As for the House of Representatives which allowed itself to be betrayed into such a performance, there is no occasion to compose any appreciation. Nothing droller has occurred in parliamentary records. On the other hand, the non-parliamentary members of the *Seiyu-kai* and the Progressists held a *réunion* on Thursday evening, and warmly applauded the Reply, declaring it to be the voice of the nation and calling upon the Ministry to resign. But Mr. KONO HIRONAKA himself has resigned his membership of the Progressist Party. He was not present at a banquet given by the Party on the night of the 10th instant, though one object of the affair was to celebrate his elevation to the Presidency of the Lower House. Count OKUMA was present, however. Indeed the banquet was in part by way of acknowledging his own previous hospitalities. The Count made some very interesting remarks. He had learned about the House's Reply from a newspaper extra handed to him as he was driving to the banquet. In England, he said, the Address to the Throne generally constituted a subject of grave debate, but here a Reply of the utmost importance had been adopted without a single query or a single dissentient voice. Evidently the Count was more than doubtful about the wisdom of such precipitancy. Referring to Mr.

KONO HIRONAKA, he expressed unstinted surprise that he should have resigned without a word of explanation, and that he should have absented himself without any apology from a banquet given in his honour.

It need scarcely be said that the leading journals of the capital condemn the whole proceeding in unqualified terms. The *Kokumin* says that the Lower House has eternally disgraced itself by its unprecedented perfunctoriness towards a vital question; that it has been betrayed into a fatal act by an unprincipled conspiracy, and that nothing remains but to give the country an opportunity of returning new members. The *Nichi Nichi* writes in much the same tone, insisting that if an occasion hitherto treated as a mere conventionality was to be converted into a political opportunity, the thing should have been done openly and frankly, and not in such a hole-and-corner manner. The *Fiji* is less unqualified in its condemnation. It finds some excuse in the fact that this extraordinary action by the Lower House undoubtedly indicates the spirit animating the nation with regard to the present great question of foreign politics, a question which the Government must now take up in a manner consistent with the views of the people. But the *Dempo Shinbun* virtually shouts aloud its satisfaction, and makes the interesting statement that, several days before the event, Mr. OZAKI YUKIO as well as other politicians had freely alluded to the project of utilizing the Reply as an instrument for impeaching the Cabinet. The *Asahi* is on the other side. It justly notes that Mr. KONO HIRONAKA, being well aware of the immense importance of the step he was taking, owed it to his position of President to invite the House's careful attention, instead of leading the members' virtually blindfolded into a position of national and international gravity.

DOMESTIC POLITICS.

IT will probably be agreed by thoughtful persons that the political parties adopted the wisest possible course when they resolved not to reconsider the vote of their representatives in the Lower House. For a moment there was some talk of reconsideration. The Progressists, of course, did not seriously entertain any such idea. So far as they were concerned they could not deny, nor doubtless had they any desire to deny, that the Reply to the Throne, as adopted on the 10th instant, correctly embodied their sentiments. They had taken the public into their confidence too fully, and their resolutions had been too unequivocal, to permit any subsequent equivocation. But with the *Seiyu-kai* the case was wholly different. The members of the *Seiyu-kai*, for reasons fully set forth in these columns before the date of the opening ceremony, were not prepared to impeach the Cabinet's foreign policy and would not have endorsed any resolution tending to impeachment.

Equally certain is it that they were taken by surprise when they heard the strange Reply read, and that their failure to challenge it was due either to the bewilderment of the moment or to a hastily formed inference that such a draft could never have been submitted by the President of the House without the previous consent of all the party leaders. There was consequently some prospect that they would demand reconsideration of the draft when the House re-assembled on the 11th instant. Happily they did not adopt any such course. It would have greatly belittled whatever dignity remains to the House of Representatives, and would have brought ridicule on Japanese parliamentary institutions in general. They wisely decided to stand to their guns, and dissolution followed as a matter of necessity, since the resignation of the Cabinet at this juncture must have been disastrous to the interests of the State and would have amounted to a virtual acknowledgement of the justice of the House's indictment.

As for Mr. KONO HIRONAKA, he has made frank confession that the Reply was drafted entirely by himself, that no one had any previous knowledge of it and that the whole responsibility rests on his own shoulders. No one ever doubted Mr. KONO's bravery. He is known to be almost fanatically courageous. Indeed he now says plainly that had his draft been rejected, his intention was to step down from the President's chair, and that when he entered the House on the 10th instant, he never expected to return scathless to his own home. In short, he fully appreciated the nature of the act he contemplated and accepted all the consequences. His defence is that he does not regard the present House of Representatives as the practical exponent of the people's opinion, and that the readiest route to correct that defect is to change the procedure by adopting the English model in the matter of the Reply to the Speech from the Throne. He says other things also; talks about the tyranny of corruption and so forth, but the kernel of his argument is contained in the above epitome. Thus far, then, he will obtain applause in some quarters. But history will inevitably say that he abused the trust reposed in him. He perverted his position as President of the House into an instrument of party politics. There can be no second opinion about that. Except as President of the House the *coup* he accomplished would have been impossible to him, and as President of the House he had no moral right to essay it, though technically his conduct is not open to reproach.

When we come to consider the case of the *Seiyun-Kai*, who have been betrayed into a course they never intended to take and would never have taken open-eyed, we are compelled to say that they have been rightly punished. The root of all their trouble lies in disingenuous traffic with a political party which they can not honestly support.

They do not share the views of the Progressists. They can not sincerely pretend to share them. Yet they deliberately join hands with the Progressists for destructive purposes; and further they have shown that, attaching no genuine importance to the obligations with such union ought to impose, they are ready to throw over their allies and compromise with their alleged enemies. They have been justly served. Last spring they made a laughing-stock of the Progressists. This winter the tables are completely turned. And so long as Japanese parties continue in this light-hearted manner to sacrifice principles on the altar of expediency, they must expect to become occasional victims of the treachery which their own practice engenders. There was not a grain of sincerity in the recent alliance between the *Seiyun-kai* and the Progressists, and its most salient result having been the elevation of Mr. KONO HIRONAKA to the presidency of the Lower House, fate has for once been strictly just when she decreed that the disastrous consequence of the sham should be compassed by Mr. KONO's instrumentality. It really appears supremely ridiculous that these two parties should combine their voices to accuse a Cabinet of opportunism in domestic politics. What is their own rule of political procedure but one constant concession to the uses of opportunism? All Japan's friends wish to see her attain what her people fondly call *kempō no bika*—the fair result of Constitutional institutions—but that end does not yet appear to be in sight.

CUSTOMS APPEALS.

Baron Sone, Minister of State for Finance, delivered a decision on Dec. 12th in an appeal filed by Messrs. Gysin and Schoeninger, No. 93, Yokohama, against a decision given by the Yokohama Customs. According to the *Official Gazette*, the foreign firm imported a case containing ebonite from Hamburg on which goods the Yokohama Customs imposed duty at the rate of yen 17.50½ per 100 *kin* in accordance with No. 412 of the General Statutory tariff which regulates manufactured rubber. The importers contended that the goods in dispute are a kind of chemical compound of inferior rubber produced in Java, or India, in which sulphur is mixed and is made into plates and bars, simply polished. These could not be called manufactured rubber goods and consequently duty should be at the rate of *ad valorem* 10 per cent. under No. 39 of Japan-German Conventional Tariff. The appeal was rejected on the ground that the goods were solid and hard in nature and were made of rubber plates.

The Minister for Finance rendered a decision on Dec. 14th in an appeal instituted by Messrs. L. J. Healing and Co., No. 72, Yokohama, against a decision delivered by the Yokohama Customs. The firm imported a certain quantity of "over-head electric line materials" on which the Yokohama Customs imposed 20 per cent. *ad valorem* duty in accordance with No. 271 of the General Statutory Tariff, which provides for metal manufactures not enumerated in the table. The materials in dispute were to be used in the construction of an elevated electric railway. The importers insisted that the materials were not as classified by the Customs, but were for the use of the electric light, and that the duty should be 10 per cent. *ad valorem* under No. 10 of the same tariff. The appeal was rejected on the ground that the materials were not for the general use of electric light, but were to be used exclusively for an electric railway.

THE LAW COURTS.

THE ALLEGED SILK FRAUDS.

In the Yokohama District Court, the trial of Mr. Alfred Le Prevost and Mr. Carl Bremer, and three Japanese who are alleged to be involved in the silk frauds—41 counts of which are set out—was resumed before Presiding Judge Watanabe, and two Associates and Public Prosecutor Nakamura on December 14th.

Mr. Akiyama and other lawyers employed by the defence were present as usual.

The Court sat at 10 a.m.

Mr. Ohashi, Counsel for Nishida, one of the Japanese accused, reminded the Court that Nishida did not know whether Sawada and Yoshikawa had been employed in the business between Messrs. Cornes and Co. and Messrs. Fraser Farley and Co. Referring to the statement by Nishida in the preliminary trial, Counsel stated that there was a delivery note made by the accused for 51 cases of habutae silk addressed to Messrs. Fraser, Farley and Co. which was endorsed in receipt by Okuda one of the Japanese employees of the firm. The transaction showed that there was no broker employed. Counsel referred to other instances to show that his client had nothing to do with the business between the two firms.

Mr. Ideura, counsel for Mr. Bremer, pointed out to the Court that the whole amount of the silk business done by Mr. Bremer since he obtained the firm name of Messrs. Fraser, Farley & Co. was yen 960,000. Of the whole total, yen 360,000 was the result of business carried on with Messrs. Cornes & Co. and the gross profit on this was yen 8,256.75. But the profit was swallowed up in expenses incurred in the business and further yen 150 was actual loss. In the books which were in the custody of the Court, the facts were clearly explained. Bremer had not received any illegal profit as was charged by the Public Prosecutor.

Mr. Akiyama, Counsel for Mr. Le Prevost, stated that 400 pieces out of 1,000 pieces of silk which were sent on March 4th to Messrs. Dent & Co. London, were rejected. The silk was then transferred to the office of Messrs. Kahn & Kahn, London, where a loss of yen 2,700 was incurred. The loss including commission amounted to yen 880, but the commission should be deducted from the loss. He added that the silk pongee which was described in the letter to Messrs. Dent & Co. was a mistake for *mon habutae* silk.

Mr. Kishi, Counsel for Mr. Le Prevost, having presented to the Court two copies of the *Japan Herald* of Dec. 19th and 30th, 1897, stated that these would show that Mr. Charles Edward Miller stole yen 24,000 belonging to the China and Japan Trading Company, Kobe, while in the employment of the firm as book-keeper and cashier, and absconded from Kobe. Mr. Miller was arrested at Singapore and brought back to Kobe, where he was tried at the U.S. Consular Court and sentenced to four years' imprisonment with hard labour. According to the paper, the left eye of Mr. Miller was ■ had that he could hardly see. That was the person who examined the books of the business of the silk department of Messrs. Cornes & Co. transacted during the period between October, 1901, and June, 1902. He made a long report for Messrs. Cornes & Co. and concluded that there was a loss of yen 62,000. His report only dealt with the apparent loss which was arrived at from consulting the balance of cash, but was silent with regard to the commission account, which must be taken from the figures given as loss. Mr. Kishi thereupon asked the Court for leave to employ a competent public accountant to re-examine the books in order to ascertain the real profit or loss in the various transactions carried on by Mr. Le Prevost. Counsel then asked that Mr. F. O. Stuart, of Messrs. Findlay, Richardson & Co., No. 6, Yokohama, be called in, as that gentleman was a well-known accountant. Counsel added that the transactions between Mr. Le Prevost and Messrs. Fraser, Farley & Co. were properly conducted in accordance with market quotations. Having merely conjectured that quotations below the market standard were obtainable and because

these were not given the business had no reason to demand the infliction of a punishment.

Mr. Akiyama supported Mr. Kishi in urging that Mr. Miller's report was not satisfactory. In some points, it was believed that he intentionally rendered an imperfect statement so as to induce the judicial authorities to bring a charge against Mr. Le Prevost and others. The Public Procurator seemed to have depended entirely upon this incorrect report as a basis for his charges.

Mr. Ideura stated that to employ a competent accountant to re-examine the books was most essential in order that Mr. Bremer might clear his business reputation with Messrs. Cornes & Co.

The Court asked Mr. Le Prevost and the other accused whether they had any objection to the request made by Counsel. They replied that they had no objection.

The Public Procurator protested against the granting of the request of Counsel. He said the fact that there was a loss of over yen 60,000 in the silk department of Messrs. Cornes & Co. had been proved in the preliminary trials. The accused altered their statements in open Court to escape the charges, pretending that market prices had fallen during certain periods and that the losses were merely due to fluctuation and were only apparent not actual. At the first examination, Mr. Le Prevost stated that the so-called loss in 1900 was spread over 1800 pieces of silk. At the second examination the accused stated that the report made by Mr. Miller was incorrect. Thus they changed their replies to the charges. The Public Procurator believed that there was no necessity to re-examine the books.

Mr. Kishi briefly replied to the Public Procurator and Mr. Nagashima, one of the Counsel for Mr. Bremer, supported him.

The Court retired for consultation for some minutes. Re-appearing, the presiding Judge said the Court rejected the request of Counsel to re-examine the books.

Mr. Kishi then presented a copy of the *Japan Gazette* of Dec. 12th, and stated that Mr. Kobayashi Beika, representative in the present case of Messrs. Cornes & Co., sent to the *Japan Gazette* a letter written by Mr. Le Prevost to Messrs. Dent & Co., asking the paper to give it publicity, saying that "Messrs. Cornes & Co. desire that it should have full publicity." Mr. Kobayashi further had italicized several passages in the letter so as to attract public attention. Mr. Kishi added that Messrs. Cornes & Co. were under no necessity to bring this letter before the public. Their only intention evidently was to cause annoyance to Mr. Le Prevost.

The Public Procurator then addressed the Court and said:—Concerning the case under trial, the points may be briefly stated in the following order: Firstly, as to the facts of the case; secondly, as to whether the explanations made by the accused are reasonable or not; thirdly, as to the application of the law pertaining to the case.

The facts are that the accused Alfred Le Prevost has been in the employ of Cornes & Co. at a monthly salary of yen 500 from the 1st of June, 1899, and was in charge of the silk department of the company, superintending all the business of the department. As the business grew he was not content with the salary he obtained, and, shortly after he joined the firm, it was arranged that he should receive five per cent. of the profits as remuneration, in addition to the salary he was receiving. This arrangement, however, was still unsatisfactory to him.

In the spring of 1901, he made a demand to Mr. Till, a partner of the firm, who was at that time in the Yokohama office, that he should be made a partner, and that a third of the profits should be paid to him. It appears that Mr. Till was a very liberal man and did all he could for Le Prevost. After he had communicated with Mr. Cornes in London, a partner of the firm, he accepted a part of Le Prevost's demand and agreed to pay a third of the profits as remuneration, pacifying him by saying that an arrangement would be made later on as to the admission of the accused as a partner. Subsequently, Mr. Till left Yokohama and Mr. Weale came to Yokohama about the autumn of the same year to succeed him. Thereupon, Le

Prevost repeated the former demand, and made a fresh demand that if the former were not accepted, he wished that another arrangement in place of it, which would be profitable to him, should be considered. Mr. Weale, knowing that Mr. Cornes had no intention of admitting Le Prevost into the partnership, was not constrained to accede to the demand. Le Prevost saw that Mr. Weale, unlike Mr. Till, was a man whom he could not persuade as he wished, and while he was considering whether he should leave Cornes and start business independently—this fact being clearly borne out by the deposition made at the public trial by Le Prevost himself and the copies of the correspondence between himself and Mr. Weale which have been produced—he heard that Mr. James, the proprietor of the firm of Fraser, Farley & Co. of No. 258, Yamashita-cho, Yokohama, was about to sell the business and trade name of the firm in question. Le Prevost then got the accused Bremer, an intimate friend of his, who had more or less capital and whom Le Prevost knew from before, to make the purchase. Then, jointly with Bremer, Le Prevost made a project to sell and export on their own account the merchandize of the silk department of Cornes & Co., which was in his charge, and get ample illicit gains in the interval by making use of the trade name of Fraser, Farley & Co., or, in other words, to use that name to make sufficient capital for the firm purchases with the view that after the customers had been increased Le Prevost would leave the silk department. In carrying out this project it was necessary to take the stock of silk goods from the branch offices at Fukui and Kanazawa of the silk department for the firm purchased; to sell and export the goods of the silk department from the latter firm to their customers; to entice the Japanese employes of the silk department to join Fraser, Farley & Co. and for Le Prevost himself to call at the firm to take charge of the business. Moreover, if these things were done without concealment, the project would have been disclosed. Accordingly, fictitious brokers were provided between Fraser, Farley & Co. and the silk department, it being thus pretended that the silk department had sold the goods to the brokers and the latter disposed of them to Fraser, Farley & Co. In fact it was considered that it would be well to make it appear as if the goods of the silk department, which were sold and exported in the name of Fraser, Farley & Co. had been purchased by the latter from the brokers. Bremer was frankly told of this project and consulted, when he at once agreed to it by reason of his desire to obtain money.

In spite of the fact that in the first place Fraser, Farley & Co., had only two customers, with one of which they had little or no business, and that it appeared to outsiders that there was no prospect of continuing the business, Le Prevost and Bremer purchased the business together with all the rights and obligations of the firm. The registration of the transfer was made on the 30th of October, 1901, though the purchase was actually made in November of the same year.

Secondly, in the same month, the accused made a request to Yoshikawa Yeizaburo, and Sawada Gitaro, silk goods brokers in Yokohama, to become fictitious brokers with respect to silk goods to be transferred from the silk department of Cornes & Co. to Fraser, Farley & Co. on condition that a fee of two sen per piece would be paid. The brokers consented to this, and since then the accused had continued to make false entries in the books so that they would correspond to what has been stated.

Thirdly, though it required several months to place the business of Fraser, Farley & Co. on a firm footing, the agreement of Le Prevost with Cornes & Co. was to give six months previous notice when he had to leave the firm. In January last year, he sent in his resignation. Since then and before he left Cornes it was hard for him to have his name publicly known as a proprietor of the firm of Fraser, Farley & Co. He therefore endeavoured to avoid his name being known as such, but the firm being jointly owned with Bremer, he from that time made visits to the firm,

directing all its affairs and sometimes representing the firm to outsiders. In proof of this, the following instances may be cited:

(1) The accused Nishida and Okazawa stated at the preliminary examination and the public trial that the business relating to the purchase, sale and export of silk goods, which was done by them at Fraser, Farley & Co., was conducted according to the instructions of Le Prevost or in consonance with what he had decided. The fact is clear, therefore, that Le Prevost was directing the employes of Fraser, Farley & Co. with regard to the purchase and sale of the merchandize of the firm.

(2) As stated by Uyeno Torakichi, it is a fact that Le Prevost had a room upstairs in the offices of the same firm, and was discussing business there, whereby it appeared to visitors at a glance that Le Prevost was a proprietor of the firm.

(3) In May last year, Le Prevost furnished a specimen of his signature to the Yokohama Boyeki Ginko in connection with the receipts required in taking delivery of the silk goods from the bank. A similar specimen of his signature was also subsequently furnished to the Hundredth Bank. It is a fact also that in the invoices sent in March last year to the branch of Dent & Co. at Yokohama in the name of Fraser, Farley & Co. it is signed "p. p. Le Prevost" or simply "Le Prevost."

Fourthly, Le Prevost and Bremer were under the necessity of bringing the business of Fraser, Farley & Co. to perfection by ignoring the business of the silk department of Cornes & Co. So the Japanese employes of the department were enticed to enter Fraser, Farley & Co., and by about the time Le Prevost left Cornes, almost all the employes of the silk department were taken away and the department was on that account compelled to close its business. The accused Nishida, Okazawa and Sawada were Le Prevost's confidants, and Nishida first went over to Fraser, Farley & Co., about January last year, and was in charge of the business department of the firm. Subsequently, in May last year, Okazawa joined the firm and took up Nishida's place, Nishida being placed in charge of the godowns. Sawada remained in the silk department. From the way the employes were distributed, it appears the fact is clear that it was not only for the purpose of completing the organization of Fraser, Farley & Co. that such steps were taken, but that a convenient arrangement should also be adopted for committing improper acts by distributing the confidants of Le Prevost with Fraser, Farley & Co. and the silk department of Cornes & Co.

Fifthly, the object of the accused was to engage on their own account in the business of the silk department of Cornes & Co. by using the name of Fraser, Farley & Co. Therefore, Le Prevost first of all signified his intention of leaving Cornes & Co. to Dent & Co., Mollison & Co. and Kahn & Kaln, customers of Cornes silk department, and then made to them an offer for business in his own name or in the name of Fraser, Farley & Co., and when the orders came, the goods were brought from the Fukui or Kanazawa branch office of the silk department, or else were taken out of the department and used in fulfilling orders. As to the exporting of these goods, the goods were delivered to Fraser, Farley & Co. and then shipped, but there were instances when the goods were packed and shipped by the silk department without being taken delivery of by Fraser, Farley & Co., the latter firm appearing to have only lent their name.

Sixthly, there were no invoices in connection with the transactions between Fraser, Farley & Co. and Cornes & Co., as the delivery of the goods of the silk department of that company to Fraser, Farley & Co. was in fact not the outcome of real purchases between them. No purchase or selling price was fixed with regard to these transactions. The price at which the goods were sold by Fraser, Farley & Co. to their customers, less charges and commission, are entered in the books as the purchase prices of the goods from Cornes's silk department. The silk department on the other hand took copies in its books of the entries made in Fraser, Farley & Co.'s books, and

assumed them to be selling prices. Most of the entries of purchases and sales in the books of both firms were not made at the time of the transactions but several months later.

Seventhly, as a result of such actions on the part of the accused, the accounts of the silk department of Cornes & Co. at the end of July last year showed a loss of more than yen 60,000. This fact requires most careful consideration, because the market prices of silk goods last year were more favourable than in the year before last, although that in spite of this fact, the silk department made a net profit of more than yen 20,000 in 1901, while the profit gained by Fraser, Farley & Co. by about July last year in the form of commission, etc., was eight to ten thousand yen.

The seven facts above enumerated reflect light on the project of the accused before mentioned and leave nothing to be desired in proving the charges made in the present case. However, to make the facts of the case much clearer a few more instances may be pointed out.

Firstly, Mr. Barmont, of Dent & Co. of Yokohama, gave the following evidence before the Court of Preliminary Examination. He said: "About January this year (1902) Le Prevost told me that as he had left Cornes & Co. It was his idea to do business jointly with Fraser, Farley & Co., and that therefore he wished to do silk business with the head office of Dent & Co., but that if business were done through me a commission should be paid so he would do business direct with the head office to exclude commission. What have I to say?"

Secondly, in a confidential letter addressed to Mr. Dent of London by Le Prevost, dated January 6th last year, which was produced by me at the last hearing, it is stated that as Le Prevost himself was taking over the firm of Fraser, Farley & Co., he was willing to do business with Dent & Co. in the name of that firm; that he would transfer the employees under him to that firm and supervise the business himself; and that before he left Cornes he wished to do business with Dent & Co. in such a manner as though it appeared that he had no connection at all with Fraser, Farley & Co. Several other things are mentioned, but they may be dispensed with as superfluous.

Thirdly, Mollison stated at the Court of Preliminary Examination, referring to the conversation he had with Le Prevost in the beginning of Spring last year, that Le Prevost told him it was his project to sever connections with Cornes & Co. and engage in business at Fraser, Farley's by making reasonable arrangements and asked whether he (Mollison) had any objection to transferring the business he had hitherto done with Cornes to Fraser, Farley & Co.

Fourthly, Bremer stated before the Court of Public Trial that the business of Fraser, Farley & Co. was under his control as if Le Prevost had almost no connection whatever with the firm, but he clearly said at the Court of Preliminary Examination that he himself was in charge of the financial business of the firm and that Le Prevost was consulted as to all the purchases and sales of goods. In comparing this with the statements made by Nishida and Okazawa already mentioned it is evident that the opposition made by Bremer at the Court of Preliminary Examination is true. A few words more on this point. Bremer, the same as Le Prevost, made a statement at the public trial different from that at the Preliminary Examination. While he made more or less reasonable depositions at the Preliminary Examination he often struck them out at the public trial.

Therefore, what has just now been stated by me will be made an instance of the fact that Bremer's statement at the public trial is incredible.

Among the instances above mentioned, the point to which careful attention should be given is that in the evidence given by Barmont, who stated Le Prevost told him that it was his idea to do business jointly with Fraser, Farley & Co. This clearly means that he was to do business jointly with Bremer because Bremer already had taken over the firm of Fraser, Farley & Co.

Next the principal points of the explanations given by the accused will be argued against.

Firstly, the accused Le Prevost and Bremer maintained that fictitious brokers named Yoshikawa or Sawada were provided with respect to transactions between Cornes' Silk Department with silk goods shippers so that the feelings of Kahn & Kahn, who were sole agents for silk goods of Cornes & Co. in the continent of Europe, should not be hurt. It should then be asked why the name of Yoshikawa or Sawada was also used in doing business with Mollison & Co. and Dent & Co., the customers of the former being in Rangoon and those of the latter in England only. Again the names of the two brokers were never used in doing business with the above two firms till about the spring of last year, but why was it that the names of brokers were used since then. Most conspicuous of all is that even after the opening of direct transactions between Fraser, Farley & Co. and Kahn & Kahn the names of Yoshikawa and Sawada were entered in the books of the Silk Dept. of Cornes and Fraser, Farley & Co. Why was it? Probably no explanations could be given as to these questions.

Secondly, Le Prevost at first gave an ambiguous explanation at the preliminary trial as to the cause of loss sustained last year by Cornes' Silk Department but subsequently he stated that the loss was principally due to the fall of quotations of silk goods. After the completion of the preliminary examination the Procurators' Office made enquiries of the Chamber of Commerce as to the quotations and it became clear that the condition of the market was more favourable last year than the year previous to it and Le Prevost has never again mentioned about the decline of prices. At the previous public trial Le Prevost changed his statement and said that there were errors in the account for the year before last and that there was already a loss of yen 30,000 in that year. At the last public trial he gave no mention of it but stated that the loss of yen 60,000 was not an actual loss; that probably in the former statement of accounts 1,800 pieces of silk goods were omitted from the accounts, that yen 30,000 representing the value of these pieces of silk goods should as a matter of course be deducted from the loss; that yen 444,332, the value of stocks at the time he was to leave Cornes, was the price estimated at five per cent. less than the market value in order to purchase the goods himself; that the five per cent. corresponded to about yen 1,700; that the commission was deducted from the proceeds of sale in the books of the Silk Department and the commissions were mentioned separately, but that Miller took no notice on purpose of the commissions and put down the proceeds of sale only to the credit; and that the amount of commissions being more than yen 42,000 it would be found on balancing the accounts that the Silk Dept. made in fact a profit of more than 80,000 yen. It may be that he meant to explain that he sold the goods to Fraser, Farley & Co. for the Silk Dept. and gained profits for it. That such an explanation does not affect at all the responsibilities placed in him will be stated later on and here reasons will be given why it is difficult to admit the fact that there was such a profit. As to the settling of accounts made by Miller, he would not have examined the receipts according to the number of pieces but according to the amount of proceeds of sale so the difference in the number of pieces does not affect the receipts at all. Again, Miller made up the account of receipts and expenditures after examining all the books of the Silk Dept. so there would be no ground for saying that he took no notice of the commissions. As to the valuation of stocks, it was said that the estimate was made five per cent. cheaper than the market value but this was no more than an excuse on the part of Le Prevost and there was no proof that would justify the admission of this fact. On the whole, the explanations given by Le Prevost as to the cause of the loss were entirely groundless and from the fact that he changed his words from time to time it would be clear that his explanations were nothing more than an excuse.

Thirdly, Le Prevost had produced a series of correspondence he had made with Weale as proofs in favour of him. It would probably be his idea

to assert that as a private agreement was made with Weale at the end of June last year for the purchase of the goods of the Silk Department nothing should prevent him from selling goods after that. Such arrangement, however, was not made by Weale as representative of Cornes & Co. It was nothing more than a private arrangement. Among the correspondence it is stated here and there that a definite arrangement would be made after obtaining the consent of Cornes. There can be no doubt that Weale was making an arrangement with him in his own private capacity from the fact that he signed in his letters simply "Weale" and when he represented Cornes & Co., he signed differently. In fact, these letters have disclosed facts which were unfavourable to his interest.

Fourthly, the accused Sawada, Okazawa and Nishida stated by way of explanation that as regards the case under trial they only acted under the direction of Le Prevost or Bremer; that they knew nothing about their true intention; and that therefore they did not perceive at all the idea why the fictitious brokers named Yoshikawa and Sawada were provided. But Sawada was a most important man among the Japanese employees of the Silk Department of Cornes & Co., being engaged in such important business as financing and making up accounts of the Silk Department, while Okazawa and Nishida were in charge of the business department or godown of the Silk Department of Fraser, Farley & Co. and they were all concerned in consultation about business with Le Prevost. In the face of these facts could they say that they did not know the intention of Le Prevost? Moreover they saw or heard Le Prevost and Bremer talking about or carrying out sinister designs such as in spite of Le Prevost being still in the employ of Cornes' Silk Department he made visits to Fraser, Farley & Co. and engaged in the business of the latter firm and took delivery of the goods of the Department by that firm without making invoices or taking such other proper steps or causing silk goods to be brought direct to Fraser, Farley & Co. from the branch offices of the Silk Department or selling to the customers of the Department goods in the name of Fraser, Farley & Co. Could they still make it their plea that they did not know what Le Prevost and Bremer or they themselves were doing? Did not Le Prevost make a most trustworthy statement at the preliminary trial that it was owing to the attention given by Sawada that the names of Yoshikawa and Sawada were borrowed? A question arose why the three accused had to assist the wrong project of Le Prevost and Bremer. It might be that in the Silk Department there was none besides Le Prevost who was well acquainted with silk business and therefore if he left the Department the latter would be compelled to close its business, so the three accused were compelled to give more importance to Le Prevost than to the Silk Department itself. It was in fact clear that because they could not be separated from the person of Prevost and also because of their salaries, they were in the end led to be concerned in the case.

Lastly, let me state points relating to law. If the facts of the case under consideration are expressed in a few words it comes to this. All the accused joined in selling on their own account and in the name of Fraser, Farley & Co. the silk goods entrusted to the accused by Cornes & Co., (Bremer excepted) to sell them and made fictitious entries in the books of both firms to prevent detection. There would be no doubt that it corresponds to the misappropriation of entrusted goods mentioned in the latter clause of Art. 395* of the Penal Code. The only thing is that if the goods belonging to a master were sold by his business employees and the proceeds of sale misappropriated,

* Penal Code, Art. 395. Whosoever shall have squandered moneys, bills, or any movable effects whatsoever which have been entrusted to him on hire, for deposit, security, or on loan for use, is guilty of abuse of trust and punishable with imprisonment with labour for a period of from one month to ten years. If there has been embezzlement, concealment, or any other fraudulent act, the penalties for swindling shall be applicable.

judicial precedents treated such an offence as a misappropriation of the proceeds of sale. However, on making minute observation it would be found that there are two cases, which apparently resemble each other. That is to say that there is a case where the goods are sold on the master's account and that where they are disposed of on one's own account. Selling goods on one's own account refers to a case where he has an intention to misappropriate the proceeds already at the time of sale. This greatly differs from a case where the goods were sold on the master's account and proceeds of sale were misappropriated, and evil intention having sprung up after the receipt of the proceeds of sale. Business employees have a right to sell goods on their master's account but they have no right to sell them on their own account. Therefore if sold on their own account, the selling itself already constituted a wrongful action and the offence of having misappropriated entrusted goods would at the same time come to exist. If the proceeds of sale were misappropriated after selling goods on their master's account nothing would be wrong as to the sale of the goods and by the misappropriation of the proceeds of sale a wrongful action would for the first time be produced. Therefore it will constitute in this case the offence of having misappropriated the proceeds of sale.

There are such distinctions, but it is difficult to find such distinctions in actual instances. Therefore, in most cases it is treated as an offence of misappropriation of the price of goods sold. However, when it is clear as in the present case that goods were sold on their own account it should of course be treated as a misappropriation of goods and not that of the proceeds of sale. As to the transactions between the Silk Dept. of Cornes & Co. and F. F. & Co., Le Prevost pleaded that he was between them and sold goods to the latter firm by getting reasonable commission for the Silk Dept. i.e. to say as if the transactions were made on the Silk Dept.'s account. However, should the Silk Dept. have sold the goods direct to their customers without disposing of them through Fraser, Farley & Co. there is no doubt that the Dept. would have made much more profit. The Department was excluded from receiving a certain percentage of profit because of Fraser, Farley & Co. being placed between the parties, and the excluded profit went into the pocket of the accused at the expense of the Silk Department. Could it still be said that business was done on the Department's account? If it be assumed that transactions were made on the accused's account, Le Prevost's place on this point will not affect the application of law. The accused asserted that the business of Fraser, Farley & Co. was not jointly carried on by Le Prevost and Bremer. Now let me retire several steps and assume that. Still the fact that the accused did not sell the goods of Cornes & Co. on their account is conclusive. Therefore, the above assertion would in no way have any effect on the application of law.

Lastly, it is to be stated that if there be a contention that Bremer not being entrusted with the goods of the Silk Department of Cornes it is not fair that he should be treated as having committed an offence of misappropriation of entrusted goods, I shall state in reply that if it be supposed that that contention is reasonable the accused should still be treated as guilty of a crime caused by the selling of property for one's own which belongs to another.

Mr. Nakamura, the Public Procurator, commenced to sum up for the prosecution at 11.20 a.m. The Court rose at 11.50 a.m. for tiffin and sat again at 2.20 p.m. when the speech was resumed and continued till 3.05 p.m. At its close the Court interpreter read a translation of the argument of the Public Procurator.

The Court rose at 3.40 p.m. adjourning the case till Dec. 18th at 9 a.m., when Counsel will deliver speeches for the defence.

OBJECTION TO TEMPORARY SEIZURE.

The action brought by Mr. J. H. Jewett against Mr. H. V. Gielen presenting an objection

to the temporary seizure of property, came up again in the Yokohama Local Court before Judge Kobayashi on Dec. 11th when judgement was given cancelling the order seizing temporarily property belonging to plaintiff which was given, on Sept. 28th, 1903, to defendant, and defendant was ordered to bear costs.

It may be remembered that plaintiff seized the business books which were in Mr. Gielen's possession on the ground that they belonged to Messrs. Bavier and Co. whom he succeeded, and that the books must consequently be transferred to him (plaintiff). Defendant contended that he had succeeded to the firm, and that he must keep the books. Subsequently defendant claimed from plaintiff yen 4,600 as loss caused by the seizure of the books by plaintiff. To maintain his rights defendant seized on Sept. 23rd moveable property belonging to plaintiff, as plaintiff refused payment of the claim.

CLAIM ON A HORSE.

The hearing of this case filed by Mr. Geo. Booth against Messrs. Durand, Cobb & Co. petitioning for repayment of the price of a horse, the left hoof of which had been found to have cracks after purchase from the defendants, was resumed in the Yokohama District Court before Judge Kato on Dec. 11th.

Plaintiff's counsel stated that the certificate of the military veterinary surgeon who examined the animal in question was indefinite on some points with reference to the capacity of the horse for employment as a carriage horse. He asked the Court to call in the expert to give further explanations.

Defendants' counsel contended that it was not necessary to examine the witness as his testimony was quite intelligible as regards the capacity of the horse for carriage use and the nature of the cracks. Counsel asked the Court to re-examine a betto who appeared in a previous hearing as a witness.

The Court decided to examine on Dec. 18th the witnesses required by the parties.

The Court also decided to examine an expert with regard to a tin of ointment which the previous owners of the horse had given to a betto of plaintiff when the latter purchased the horse from them.

The Court then rose.

CLAIM FOR INSURANCE MONEY.

In the Yokohama District Court, the hearing of a case brought by Ah Tieck, a Chinaman, against the Northern Assurance Company, claiming insurance money, was resumed before Judge Hasegawa on Dec. 15th.

Defendant's Counsel, referring to the 1st clause of the policy, insisted that plaintiff had not lodged his claim with the insurance firm within 15 days after the fire, and further that he did not notify the firm as to the debris and its valuation. Counsel then summarized the evidence in Exhibits B-3 to 8, after which he added that the merchandise for which plaintiff entered a claim as having been stored in the godown and destroyed by the fire was not there at all.

Plaintiff's Counsel argued that plaintiff lodged his claim in accordance with the provisions stipulated in the policy, and declined to recognize the evidence presented by defendants' firm.

Defendant's Counsel asked the Court to examine Mr. H. S. Playfair, and plaintiff's Counsel also asked for the evidence of Tam-yat-ken, a Chinaman, as experts with regard to insurance business. After a consultation, the Court granted both requests.

The case was again adjourned *sine die*.

PETITION FOR RETURN OF BUSINESS BOOKS.

The hearing of this case, in which Mr. Max Isaacs petitions for the return of business books which are in the custody of Mr. Marcus Isaacs, was resumed in the Yokohama District Court before Judge Hasegawa on Dec. 15th, when judgement was delivered rejecting the petition of plaintiff.

It may be remembered that Mr. S. Isaacs petitioned for the return of the books in dispute and Mr. Max Isaacs representing Mr. R. Isaacs, living in New York, appeared as intervenor. The

intervenor thereafter appeared as plaintiff petitioning for the return of the books to Mr. R. Isaacs.

CLAIM ON STEEL TRANSACTION.

The hearing of a case instituted by Messrs. Birch, Kirby and Co., Tokyo, against M. Inoshita, proprietor of the Inoshita Gomei Kaisha, Yokohama, claiming yen 1,170.86, with interest from Dec. 8th till the execution of judgment, began in the Yokohama District Court before Judge Hadano on Dec. 17th. Mr. J. Takahashi, of Tokyo, represented plaintiff's firm, defendant being absent and not represented.

Plaintiff's counsel stated that the foreign firm sold defendant a certain quantity of steel valued at yen 2,215.02, to which sum interest amounting to yen 65.84 should be added, as the latter did not pay the principal on the due day, the total thus being yen 2,280.86. Plaintiffs urged defendant to pay on April 7th this year through Mr. Watanabe, bailiff, of the Tokyo Local Court, after which defendant promised to pay the amount claimed in the way of monthly installments and subsequently paid yen 1,110 during the period to July 10th. The balance, however, was still unpaid.

Judgment was delivered ordering defendant to pay the amount claimed and to bear costs.

A GUARANTEE CLAIM.

In the Yokohama District Court the hearing of the case brought by Mr. L. Abenheim, of Messrs. Bruhl Frères, No. 22, Yokohama, against three Japanese, S. Nagai, K. Kimura and B. Konda, claiming yen 12,358.76 in regard to a guarantee which was made by the Japanese, commenced before Judge Hadano on Dec. 17th.

Mr. H. Sato was present for plaintiff's firm, and defendants were not present nor represented.

Plaintiffs' counsel stated that the firm employed, on July 14th 1902, Nagai, one of the defendants, as a *banto* in the import department, with a contract providing that 2 per cent. of the net profits were to be given him as commission in addition to his salary of yen 100; that the employee was consequently to bear any loss caused in the business to which he attended. This was supplemented by a guarantee entered into by Kimura and Konda, others of the defendants, setting forth they would bear any loss caused by any breach of the contract made by the *banto*. The *banto* concluded a contract on Dec. 16th, 1901, with the Hakushindo, a photographic apparatus dealer, Tokyo, to supply them with kodaks, cameras, cards, and other sundry photographic supplies. The dealers were to take delivery of the articles on cash payment within sixty days after their arrival and to pay interest at the rate of 11 per cent per annum if the payment was prolonged over the due day, as stipulated in the contract. According to the contract made between the *banto* and the photographic apparatus dealers, plaintiffs' firm imported the goods at different periods since March 27th this year, the total value being yen 12,358.76. The Japanese dealers refused to take delivery of the goods or to pay for them. Some of the imported goods had become useless owing to the delay thus caused and the *banto* should be held responsible for the loss thus incurred. Two other defendants, who guaranteed the contract of the former, should also be jointly responsible for the loss.

The Court gave judgment ordering defendants to pay the amount claimed and to bear costs.

BOOKS RECEIVED.

It is rare to find so much information combined in artistic form in a city map as lies before us in the Association Map of Tokyo. The Young Men's Christian Association has put both missionaries and tourists in its debt by showing in one large lithographed sheet all the Christian institutions of the capital, as well as the places of interest and importance. A glance at the classified directory enables one to locate any legation, park, or railway station, for instance; or to ascertain where and by whom the 87 churches and scores of other Christian institutions are con-

ducted. Naturally, the growing work and needs of the Young Men's Christian Association are made prominent, as they deserve to be. We believe this is the first map in English to show the new systems of street railways, which will soon make a trip across Tokyo a matter of a few minutes, instead of a Sabbath day's journey. Those who know the cost of lithographing in three colours will consider the map cheap at 70 sen. It may be obtained of the Young Men's Christian Association, the Methodist Publishing House, or Kelly and Walsh. We could wish that the names of streets had been given in more detail, but for general use and as a souvenir to send abroad, we commend this map most heartily.

"Geisha Girls of Japan" is the title of a small work which contains much information about the *geisha* of Japan and has a number of photographs of *Shimbashi geisha*. It is gaudily got up and will no doubt interest tourists.

NEWS OF THE WEEK.

The Herb collection of postage stamps was sold at public auction on Wednesday by Mr. Jno. W. Hall and realized the sum of yen 1,500. The buyer was Mr. F. Nabholz.

M. Kitagawa, who had been charged with having circulated forged silver coins, was sentenced in the Yokohama District Court on Dec. 11th to 9 years' confinement with hard labour.

Mr. David Jackson, the late Yokohama manager of the Hongkong and Shanghai Banking Corporation, who died in July, left property which, according to a London paper, is valued at £12,067.

Mr. T. Chuji, a lawyer in Tokyo, was arrested on Dec. 15th at Urawa, some miles from the capital. The *Jiji* states that the charge against him is that of having obtained money by employing threats towards a client.

The 62nd Bank, Mito, Ebaraki prefecture, suspended payment for five days, commencing Dec. 5th. The *Yorodzu* states that a large amount of money belonging to the bank was found to have been embezzled by employees.

Prince Higashi-Fushimi arrived on the morning of Dec. 14th at Etajima. He immediately proceeded to the Naval College to attend the graduation ceremony there, after which he left by the warship *Isukushima* for Tokyo via Ujina.

A telegram from Kobe states that the Siamese Crown Prince will shortly order a yacht from the Kawasaki Shipbuilding Yard, Kobet. It would be interesting to know just what the Siamese Prince has done. Probably asked for tenders to build a yacht.

During the first ten days of this month, coal exported from Moji and Kuchinotsu amounted to yen 426,654 in value, which sum shows an increase of yen 47,000 over the previous period. The whole export from January 1st to the present is calculated at yen 15,881,256.

King Edward has presented to the Department of Egyptian Antiquities in the British Museum a very fine coloured papyrus of the Book of the Dead of special interest, in that it forms a portion of a work which was discovered at Thebes, the remainder having been acquired by the Louvre Museum at Paris.

During the night of Nov. 11th fire broke out in the postal car of the train between St. Petersburg and Moscow in consequence of spontaneous combustion among the contents of the consignments from abroad; 437 foreign packets and nine sacks of letters are among the objects destroyed. Most of the packets containing scrip were saved, but the total loss is roughly estimated at £700,000.

The Christmas exercises of the Yokohama Christian Blind School are to be held in the chapel of the Bible School for Women at No. 221 Bluff at 2 p.m. on Saturday, the 19th. All who are

interested in this work are cordially invited to be present. It has been found best to change the time and place since the public announcement on Sunday last, and all interested are asked to note the change.

A telegram from Shimonoseki states that a light house is about to be erected on an unseen rock in Moji Strait to take the place of a buoy which has hitherto been provided. The steamer *Shibata Maru* arrived at Moji on Dec. 15th with materials for the construction of the building.

M. Hirasawa, former official in the Department of Agriculture and Commerce, who was charged with having received bribes from merchants patronized by the office, was sentenced in the Tokyo District Court on Dec. 12th, to 4 months' imprisonment, with hard labour, a fine of yen 15, and the bribe, yen 1,685, was ordered to be confiscated.

At the opening session of the General Missionary Committee of the Methodist Episcopal Church, held at Omaha on Dec. 11th, Dr. Homer Eaton, of New York, Treasurer of the Missionary Society, presented his report. The receipts for the year were \$1,654,223, the increase, aside from special gifts, being \$136,974. The disbursements were \$1,365,485.

K. Takanashi (27) a robber, threw a stone into the Tokyo Appeal Court on Dec. 12th, aimed at the Judge. It appears that he had been sentenced in the Maebashi District Court to six months' confinement with hard labour and had appealed to the Tokyo Court. The appeal, however, was rejected on the day of the assault, by which decision the robber was greatly excited.

It is stated by the *Jiji* that the Toyohashi Bank, Nagoya, intends to wind up its affairs, to which end an extraordinary meeting will be held on Dec. 27th. The bank had been brought into Court by the Kita-Shigaraki Bank, which sued for a decree of bankruptcy, but that case was settled out of Court under arbitration. The financial condition is now reported to be unpleasant.

The Tokyo Mousseline Company held a general meeting on Dec. 11th when the accounts of last half year were submitted. The gross income was yen 333,384.25. Among the figures, yen 202,253.89 were paid as expenses; yen 6,500 was deposited as a legal reserve, yen 60,000 was paid as dividend at the rate of yen 3 per share; yen 6,500 was paid to employees as bonus; and the remainder was carried over to the next account.

Five Chinamen who arrived at the village of Kawamura, Ishikawa prefecture, having drifted about the Japan Sea for nineteen days after their ship was wrecked, were brought on Dec. 14th to Kobe. They were delivered to the Chinese Consul at Kobe and thence the same day were sent by the steamer *Ise Maru* to Chefoo. It is said by the *Nichi Nichi* that the men left Vladivostok on Nov. 19th in a sailing vessel of about 2,000 tons. She was wrecked by a storm when on her way to south China.

After the incorporation of this year's recruits, the effective personnel of the German Navy will number 35,685, or 2,277 more than last year. The number of officers is now 1,200, against about 620 of ten years back. The proportional increase in the number of German naval engineers during the ten years has been even greater, the figures being 210 for 1903, against 75 for 1893. There has been little or no change in the number of marines, which now stands at 1,275 officers and men. The Budget for next year provides for a round 40,000 officers and men being in the German Navy, against 19,492 of ten years back.

At 10.40 a.m. on Sunday, Okada Yonekichi, (41), a jinrikisha coolie, who was taking a foreign lady to the Union Church, fell down suddenly in the road between No. 28 and No. 78 and died soon after. It appears that the man first stopped then tottered for a minute as if dazed and then fell down dead. He was immediately removed to the Kagacho police station where he was ex-

amined by the sanitary authorities. At first there was a suspicion that the death might have been caused by the plague, because the man's dwelling is in Matsukage-cho, near where plague cases have occurred, but it was soon found that he was given to excessive drinking and that this habit caused his death.

In the "Proceedings of the Zoological Society" (of England) Colonel C. E. Stewart makes the interesting suggestion that the tiger was originally not a native of India, but a purely northern animal, which has gradually extended its range southward. He points out that while Sanskrit possesses a word for "lion," it has none to designate the tiger, and that apparently no allusion to a tiger in India can be traced to a period anterior to the early Mahomedan conquerors. No allusions to tiger hunt occur in the monuments of the kings of Assyria or Persia, while, though Marco Polo mentions the tiger, he does not speak of it as an Indian animal. The absence of the tiger from Ceylon indicates, in his opinion, that there were no tigers in India prior to the separation of the island.

The Tokyo Electric Light Company held a general meeting on Dec. 15th when a report on the business of the last half-year was submitted to shareholders. The net profit for the period was yen 200,864.56, to which a balance of yen 3,391.01 carried forward from the previous account was added. Yen 10,044 was added to the legal reserve; yen 183,000 was paid as dividend at the rate of 6 per cent.—yen 3 per old share and yen 2 per new share;—and the remainder was carried over to the next account. The shareholders decided to present yen 10,000 to the family of the late Mr. S. Kimura, president of the company, for his meritorious services; to add yen 3,500,000 to the present capital, making yen 7,000,000 in all, and to issue debentures of not more than yen 1,000,000.

A telegram from Taipeh, Formosa, to the *Asahi*, states that the Government force occupied, on Dec. 9th, Magasa near Banshoryo. The chief of the aborigines and some followers were killed. The following morning the force advanced to Togasa, where seven or eight hundred aborigines opposed them strenuously and a serious engagement took place. Some of the police were killed, others wounded, and two field-pieces were damaged. Other natives at Nanow, Giran, are making riotous demonstrations and about a thousand at Takoro, who sided with the Government force, have been despatched against the former. Serious fighting, lasting two days and a night, took place, with the result that about thirty sheds of the Nanow tribe were burned and fifteen of them killed.

CORRESPONDENCE.

WILL JAPANESE TAKE TO CRICKET?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Enclosed I beg to hand you an article that appeared in a recent number of *Cricket* and which, I think, may interest a good many of your readers. One could make a great many comments on it but I don't consider that I am capable of doing so as I am a comparatively new-comer to Japan.

For your guidance, as you may not be well acquainted with the paper, I might state W. A. Besterworth writes a couple of columns every week in *Cricket* and I have put his name at the bottom of the article, as it is there in the original, but I do not wish you to suppose from that, that it is a particular occasion on which he has contributed.

Yours faithfully, BERNARD C. FOSTER.

Yokohama, December 9th, 1903.

BOUNDLESS POSSIBILITIES.

Edwin Arnold is so well known as a sincere friend of the Japanese, and anything which he writes is received with such great attention in Japan that his remarks in a recent issue of *The Daily Telegraph* on the benefits which would accrue to the subjects of the Mikado if cricket were to become universal among them ought not to be passed over without notice in a paper devoted entirely to the game. The Japanese are by nature so quick to learn, and such adepts at copying, that if once they began to play cricket seriously, they would take to it as readily as a

moorhen takes to water. But let us see what Sir Edwin Arnold thinks about it. "Nature," he says, "sometimes permits or forbids the success of a sport which regenerates the whole people. England for example, with her expanse of green grass seems made for cricket, and if that game could be introduced and adopted by the Japanese I do not know any single reform which would prove a truer blessing. To make cricket universal among the subjects of the Mikado would give them an exercise healthy, manly and absorbing, which is greatly needed, while the cultivation of turf would imply the creation of grazing grounds for sheep and cattle, of which they are now so destitute that in Japan you never see two or three cows together; indeed, I have paid a copper coin in one of the villages as price of admission to inspect that wonderful animal, a sheep, shut in a cage."

So far Sir Edwin's position is quite unassailable by a cricketer, for he expresses just what every cricketer must now that his attention has been called to the Japanese. But, happily for Japan, cricketers will at once see a weak point in Sir Edwin's reasoning when they read his conclusions, which are as follow:—"Why, then, does not Japan borrow cricket from us, as it is to be hoped she will soon take the Roman character for the printing of all her books instead of that cumbersome and costly 'Honji,' the Chinese characters of which rob every Japanese boy and girl of five or six years of their school time? The answer is that she cannot. "A dwarf bamboo grows over all her downs and uplands, which pricks the living membrane of any grazing creature into inflammation and death, and this, it is said absolutely forbids her the cultivation of turf, which, indeed, is nowhere seen from end to end of the country."

If there were no such things as matting wickets the absence of grass in Japan might hinder the adoption of the game, although it would not absolutely prevent it from being played by enthusiasts. But when we know that in South Africa and Holland, in many parts of India, Australia and America, as well as in several other countries where turf which is suitable for wickets cannot be grown, cricket flourishes amazingly on matting, there is not the slightest reason why it should not do so in Japan. All that is necessary is to find a level piece of ground, to clear it of obstructions and to lay down matting for the wicket. The expense is but trifling, which in a country inhabited by so many poor people is a consideration of the very greatest importance. What, then, is there to prevent the Japanese from playing cricket in their own country? Absolutely nothing, except a want of energy—and the Japanese have never been accused of being a lazy nation. To the uninitiated it may seem a very tall order to expect an Eastern people to take up what is purely an English game, but if the natives of India have adopted it with an enthusiasm which has been a never-ceasing source of surprise to Europeans, why should not the Japanese become interested in it? Size and strength are not of so much importance to a cricketer as a good eye and a supple wrist—it is only necessary to point to men like Quaife, Denton and Abel to prove this—so that the tiny Japanese would not be handicapped as they would be at football and many other games. It may be a long time before a team from Japan can venture to make a tour in England, but it is not beyond the bounds of possibility that in years to come an English captain may be seen tossing for choice of innings at Lord's with an almond-eyed gentleman from the far East. A wild dream? Perhaps; but if the Japanese can be persuaded to take up cricket they will not do it by half measures; on the contrary they will strain every nerve to become adepts at it. One thing is certain; if a Japanese cricketer were to take up his residence in the London district, and were to join the local cricket club, he would receive as enthusiastic a welcome as the many Indian native cricketers who have settled among us. He would at once be made "one of the family," and would be treated in all respects as if he were an Englishman born and bred.

I have an idea that in his younger days Sir Edwin Arnold was a cricketer; I know that this is not the first time that he has written in favour of the game. But whether he has been a cricketer or not, to him belongs the honour of being the discoverer of the vast possibilities which lie before a great people if they will only avail themselves of the opportunity. It must now be left to pioneers to take the next step towards inducing the Japanese to play cricket. There are Englishmen living in Japan who regularly read *Cricketer*, and they have a great opportunity before them. But, after all is said, Sir Edwin Arnold himself can do more than any other man to keep the ball rolling, by stirring up the right people in Japan to exert themselves.

W. A. BETTESWORTH.

HORSE-RACING IN YOKOHAMA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The notes on the rules of the Nippon Race Club in your issue of the 5th inst., are both interest-

ing and instructive, and I am glad to see that there is still some interest taken in racing matters in Yokohama. I only hope that the Club may see its way to take up the points thus brought to notice.

Horse-racing has of late years been growing in popularity in Yokohama by leaps and bounds, and it would seem about time that our racing rules were brought into line with racing practice the world over.

Might I be permitted to suggest some further alterations in the Club rules which might be adopted with advantage; for instance:—

THE SKELETON PROGRAMME.

It is pretty generally agreed that a more or less fixed programme would be for many reasons preferable to the present system. The Executive Committee is elected at the general meeting of the Club in January, for a term of one year. On coming into office, they inherit from the outgoing committee a skeleton programme which may or not accord with their ideas. They have to make the best of this for the Spring Meeting. For the Autumn Meeting they may work on entirely different lines, and then publish a skeleton programme for the Spring Meeting, as a legacy for the next Committee elected. Thus, from year to year, owners are kept in a state of uncertainty. For instance, at the last two meetings horses that have won more than ten races have been excluded, and this certainly influenced the sale of one notable racer, and probably many more. The skeleton programme just published does not, I am glad to see, bar any horse because it has won any number of races. But will this be so in future? Surely it would be far preferable to have a fixed programme in the rules, providing a certain number of standard races, say somewhat on the following lines:—

AUSTRALIAN SUBSCRIPTION HORSES.

Newcomers, (provided 20 are subscribed for), 5 races, of which at least one handicap.

Second Meeting, 3 races, of which at least one at weight for age with penalties, and at least one handicap.

All subscription horses except newcomers: 3 races, of which at least one at weight for age with penalties, and at least one handicap.

All subscription horses: 1 Championship, weight for age.

ALL COMERS CLASS.

Three races, of which at least one handicap. Subscription horses entered in this class barred from races confined to subscription horses at the same meeting.

CHINA PONIES

Subscription, newcomers, (provided 12 subscribed for,) 4 races, of which at least one handicap.

All subscription, except newcomers: 3 races, of which at least one at weight for inches with penalties, and at least one handicap.

All comers: 3 races, of which at least one at weight for inches with penalties, and at least one handicap. Subscription ponies entered in this class barred from races confined to subscription ponies at the same meeting.

The Committee to arrange detailed programme, stating distances, races in which penalties are to be carried, extra penalties for winners at the meeting, where winners at the meeting are to be excluded, and which are to be handicap races.

It will be observed that my suggestion takes up 25 races provided all classes fill, the rules call for at least five entries and this would leave two races for the Committee to allot, making 9 races each day. If necessary, more, as we have in the past managed ten races in a day.

I leave out Countrybred subscriptions, as I feel sure that no racing men would now subscribe for such cattle as were provided in the last two batches. If there are decent horses to be obtained in the country they could run in the races for All-comers, with allowances.

PENALTIES.

These to my mind should undoubtedly be fixed by rule, and if the scale of weight for age suggested in your "Notes" be adopted, a fixed penalty of 3 lbs. per win up to a maximum of 15 lbs., would, I think, be about right, as the top weight limit would then be 150 lbs.

In a previous letter I suggested a method by which wins could be better distributed, making it difficult for any one horse to run off with three or four wins at a meeting, and preventing a repetition of such a farce as Suma's race on the second day at the last meeting. If this were carried out, it would take a horse several meetings to get up to the maximum penalty, and then *anno domini* would do the handicapping.

It seems to be the prevailing idea of many that the lucky drawer of the best subscription horse should at least score three wins at the first meeting—*wins*, not *successes*—for no sportsman would be proud of such a hollow victory as that above referred to. For my part, I should far prefer to win three good races at three successive meetings, and so, I am sure, would

Suma's owner, and all other good sportsmen. A better division of the wins would keep the best of our horses, on the course from meeting to meeting, and with no fear of being barred after winning, say 10 races owners would not be forced to sell at the dictation of the Committee, as is the case now on account of the continual chopping and changing.

Yours &c.,

D. M.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to D. M.'s suggestion to provide for a fixed skeleton programme in the rules of the Nippon Race Club, there is no doubt that it is highly desirable that there should be some continuity of policy in the provision of races for the various classes of horses with which the sport is carried on in Yokohama. The continual changing from meeting to meeting is undoubtedly harmful to the interests of the sport, and there is not sufficient inducement to owners to retain any horses or ponies except the proportionately few that are at the top of their class.

But I think that it would be a grave mistake to include a fixed skeleton programme in the rules of the Club. It is impossible to foresee the changes which a very few years may bring in the conditions of racing in an out-of-the-way place like Yokohama. We cannot depend upon getting from meeting to meeting batches of China subscription ponies sufficiently even to make it possible to bring together one batch with another after their first meeting. The present conditions of the supply of Australian griffins might be changed at any time. It would be very much better to make provision in the rules such as the following, in place of rule 28:—

"The Permanent Committee shall have power to frame a skeleton programme, extending over a period of three or more years, which shall be adhered to as closely as circumstances will admit by the Executive Committee, who shall publish detailed programmes for the Spring and Autumn Meetings as early as they conveniently can before the dates fixed for such Meetings. Any changes in the standing skeleton programme found necessary by the Committee, shall be advertised for the information of members as early as possible."

Such a rule, followed out by the Permanent Committee, (of which the Executive Committee for the time being are ex officio members,) would result in a continuity of policy in the matter of programmes, whilst providing for any changes that might be found necessary to suit altered conditions of supply of racing material. It would not be convenient to have to make changes in the rules of the Club whenever the standing skeleton programme required amendment; but that would be required by D.M.'s suggestion.

The Permanent Committee having once framed a standing skeleton programme, for say three years, would extend the term from time to time, with or without changes according to experience of the working of such programme. Owners would then have some guidance in deciding whether to keep or sell a horse after a meeting, instead of being at the mercy of a continual changing of policy as at present.

Yours etc.,

A. R. C.

THE CHARGES OF FRAUD.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As the matter is one of great public interest, I enclose herewith the full text of the famous "Dent" letter which was produced by the Public Procurator on the occasion of the last hearing.

Great stress was laid on this letter by the Public Procurator and Messrs. Cornes & Co. desire that it should have full publicity.

Yours truly,

J. E. DE BECKER.

(CONFIDENTIAL.) Yokohama, 6th Jan., 1904.

DEAR MR. DENT:—From general conversations I have had with Mr. Harcourt I have gathered that you are quite keen on taking up the silk goods business, and as I have made up my mind to terminate my present engagement with Cornes & Co. and to establish myself here as an Exporter it seems to me that we might arrive at some understanding mutually profitable.

I am taking over the silk business of Fraser, Folley & Co. and the trade name. They have two good accounts which I have nursed for them, which will form a nucleus for a start. Neither of these is with Europe, so that I am quite free to make proposals for business to any one established there.

As you will know from your experience with raw silk, business is only possible on the smallest margin, owing to the financial facilities afforded to the exporters. The competition in silk goods has become very keen, but fortunately the number of people on that side who thoroughly understand the article is limited, while the trade is steadily increasing so that it ought not to be difficult for us to obtain a good share of it.

As an instance of the competition Kahn & Kahn and ourselves have had to fight against, I know a shipper here who employs a selling agent in London to whom he pays 1½ per cent. who besides selling attends to the distribution of the goods among the various indentors, etc. The shipments are drawn for against a banking house which charges only ½ per cent. accepting commission and attends to the collection of accounts. The shipper has to pay landing charges, warehousing when necessary and telegrams, to cover which he includes 1¼ per cent. in his price, you will see at once how formidable a competitor he would be were he as well placed for buying as we are, because his charges on your side are practically the same as those paid by distributors like Kahn & Kahn.

Having an office in London I suppose you would find it sufficient to engage a good active salesman at a moderate salary and a commission which would put you at a great advantage over K. & K. who pay a very handsome commission to their London agents. On this side I am prepared to work for a much smaller commission than would satisfy Cornes & Co. We ought then to be, if your views coincide with mine on the necessity of working on a small margin, in a position to do a very large business indeed.

To make everything as simple as possible I think it will be better for me to quote selling prices in which I will provide 2½ per cent. Dis. and 5 per cent. to cover your profit and expenses which I calculate as follows:—

	Per cent.
Your profits	2½
Landing Expenses	¼
Telegraph Expenses	½
Marine Insurance	½
Credits	½
Sundries	½

5

My quotation to you will be understood to be on this basis. I may also say that I shall have my prices on the following scale:—

	Per cent.
My commission	1½
Profits	1¼
Packing and shipping	1½
Telegrams	1½
Interest and Fire Ins.	1½

7

I mention these details so that you may see that I have no intention of driving business away by making scale of charges prohibitive.

Telegraphic expenses being a very important item it will be well to avoid cabling about orders for 50 pieces as in your last enquiry for which I have sent you a quotation to-day.

One of the items, 6'36", is easily ordered in lesser quantities than 500, and often by 1,000 pieces by K. & K. which you will readily see makes a big difference in the telegraphic charges.

I have suggested to Mr. Barmont the advisability of your obtaining a list of samples of the most popular goods and he agrees to my making up a case for your use. I think it will be sufficient to have the following represented:—

Kawamata (boiled) 1 & 11 5 x 5½ me	4
Kagas (clean) 1 & 11 5½ x 6 me	4
Ech. " 1 & 11 5½, 6, 6½, 7, 7½ me	10
Kaw. " 1 only 4½ x 5 me	2

Pieces

which I am sure you will find very useful. Some time ago Mr. Barmont showed me in one of your letters to him a reference to some (—) Twists in various grades which you wished coded.

At present the denomination referred to would cost:—(selling price, i.e. including 2½ per cent. Dis. and 5 per cent. and etc.)

	81/2	9	91/2	10
27"	57 5	59 2	61 2	63 6
36"	75/6	77/2	80/6	83/8

The (?) me are dearer than the figures you mention which are for old stocks. The weavers do not care for 8½ as the cloth usually "pulls" and rejections are heavy. We do not recommend it.

To avoid delay I am sending you under separate cover a telegraphic code which covers all the principal qualities and dimensions of Piece goods. I have not had time to arrange a table for Handkerchiefs, but will do so as soon as possible. You will observe that in price table I have provided for "first cost," but this is not to be used unless specially indicated.

Please address all telegrams to "Farley" and if any business is initiated arrange for credits in favour of Fraser, Farley & Co. I have explained to Mr. B. how absolutely impossible it would render business to attempt to do it through a second office at this end. If it is to be done it must be directly with London as everything is cut so fine that there is not enough to divide.

I have to request you to be good enough not to

mention my name in any way in connection with Fraser, Farley & Co. or as your buyer for the present, as I do not wish to appear in any other role than as Cornes & Co.'s buyer till I have left the firm. I am obliged to give them 6 months notice but I have hopes that they will allow me to retire within much less time. However, I am putting my best men into the offices of Fraser Farley & Co. and will supervise the business from now on. I have also organized branches in this interior so that there will be no difficulty in starting in earnest the moment this reaches you.

I am confident that if this is taken up in earnest at your end we shall soon take a very prominent position in the London market in Japanese silks. The difficulty will no doubt be in getting a thoroughly good salesman.

Believe me, dear Mr. Dent,

Yours faithfully,

(Sd.) A. LE PREVOST.

BISHOP NICOLAI AND THE PROTESTANT MISSION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the "Summary of the Religious Press" in the *Japan Daily Mail* for Dec. 7th, Mr. Ishikawa Kisaburo, of the Greek Church, is quoted as making some comparisons and reflections, not complimentary to the Protestant Missionaries working in Japan which ought not to be left unanswered. There is just enough plausibility in the remarks of this doughty champion of the Greek Church form of Christianity to carry weight with some people, especially if they are already somewhat biased against all missionary work.

First, let me premise, that it would doubtless be a great blessing to Christian work in Japan if more of our missionaries, both Protestant and Catholic, had the remarkable physical strength, and the unusual devotion of Bishop Nicolai, to enable them to follow his illustrious example of self-abnegation in the cause of our beloved Master.

But having, in justice to Bishop Nicolai, allowed this, I would like to ask, are all Christian workers, who give themselves to God for missionary service, called on to live the John the Baptist style of life? Are not most of us doing as much good by approximating to the type of life that our Master lived, which caused comparisons to be made between him and his forerunner?

Because of the Master's social habits did not the cavillers of his day falsely call him a wine bibber?

Mr. Ishikawa says that his church avoids bringing over anything from western lands to engraft upon the church here. I would like to ask if this ascetic form of Christianity, which under certain circumstances, and in certain people I allow may be commendable, whether it is the best form to set before the Japanese for a model? Is it universal Christianity? Or is it not rather a type that pertains more to the Roman and Greek Catholic Churches? Did not Paul commend for universal Christianity, and for ordinary environments, such as we find for instance in Japan, marriage, and the social life? Which is more generally exemplified in the home life of the Protestant missionaries than in the ascetic life of Bishop Nicolai, however commendable that may be in him.

Again is it not a fact that but few missionaries could live and work for any length of time as Bishop Nicolai is able to work? His lack of nourishing food, his incessant industry, his giving up all home comforts, his not taking any vacations from the humid atmosphere of the Japanese summer, would it not soon send most of us to our home land, entailing great loss to the work, and enlarged expense to the earnest Christians in the home land, who are supporting our work by much self-denial?

And again, is it not a fact that the "saké" cup conviviality of all Greek Church celebrations, led by the evangelist, and participated in gladly by the rank and file of the believers, is a custom brought over from Russia where this thing has become a crying evil? Also is it not true that the great stress laid upon the ceremonious worship service in the Greek Church in Japan, and the notorious indifference to the observance of the Christian Sabbath, and other matters of importance in normal Christian conduct is due to the Russian form into which that Church has been cast?

Again was it not in the same issue of the *Japan Mail* that a Roman Catholic writer—evidently he was impressed concerning the need by the lack that he saw in his own, and in the Greek Church—that public preaching services, and social helps (by which means, he might have remarked, the Protestant missionaries are in the habit of carrying on their work) are largely needed to bring home to people's minds, and hearts, the great truths that we want to teach?

Mr. Ishikawa makes a covert sneer at such methods, and commends the quiet house to house work that his church is doing. While we do not disparage the

quiet house to house work, we would like to ask Mr. Ishikawa to think of the prominent influence the Protestant Christianity is exerting in Japan in religious, political, and social lines. And further has he ever asked himself what his church would have done for converts if the Protestant missionaries, and their earnest Japanese co-labourers, had not carried on their aggressive propaganda of our faith by their public preaching services, and by the social influence of hundreds of Christian homes, resulting in the easily recognizable work that they have done in this country for the past forty years.

But I presume that it always will be, as it was in the Apostolic day, that people who ought to know better will continue to sneer at the Pauline method of extending the Faith, viz., by what they choose to call the "Foolishness of the preaching."

American Baptist Mission, E. H. JONES.
Sendai, Dec. 8th 1903.

MAILS FROM ENGLAND.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—I am pleased to inform you that this Office is in receipt of a report from the General Post Office in London to the effect that they have made preparations for forwarding hereafter their mails for Japan through Siberia, but this transmission is limited to prepaid letters and cards bearing the special indication "via Siberia."

Yours faithfully, T. AONUMA,
Superintendent of Foreign Mails.
Yokohama, December 16th, 1903.

AN ELOPING PRINCESS.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—With reference to the statement in your issue of this morning that the Princess Alice, whose elopement has just been brought to light, is the daughter of Don Carlos, I beg leave to draw your attention to the following.

The said Princess Alice is the fourth daughter of Don Carlos, Prince Charles de Bourbon, Duke of Madrid, but not of Don Carlos the King of Portugal.

My object in supplementing the above detail, is simply to remove any doubt or misapprehension which might have arisen in the minds of those of your readers who may not be in possession of complete information on the subject.

Thanking you for the insertion of these lines,

I remain, yours faithfully, CRUZ,
Yokohama, December 17th, 1903.

YOKOHAMA GENERAL HOSPITAL.

MAURICE RUSSELL.

Hon. Treasurer.

MOSQUITO YACHT CLUB.

The annual general meeting of members of the Mosquito Yacht Club was held at the Yokohama United Club on 11th instant. There were present:—Messrs. B. H. Betts, F. E. White, F. E. Wilkinson, B. Marquetti, F. J. Hall, L. Casati, S. Wheeler, G. Reiffinger, M. Schellenberg, G. L. Bayley, H. Keswick, H. Gunn, W. B. White, W. Y. Showler, C. K. M. Martin, E. Edisson, B. B. A. J. M. Weale, B. Runge, C. Rankin, C. S. Averil, Cox Edwards, B. Poole, J. J. M. Carst, James Martin, W. H. Percival, A. McGlew, A. Catto, C. Palmer, H. W. Buckland, and S. Warming.

The minutes of the last general meeting were read and adopted.

Mr. Gunn proposed and Mr. McGlew seconded that the report and accounts be accepted. Carried.

The election of officers then took place resulting as follows:—Commodore, F. J. Hall; Vice Commodore, H. Gunn; Hon. Treas., W. B. White; Hon. Sec. J. J. M. Carst; Committee, M. Schellenberg, and A. J. McGlew.

Mr. Hall proposed and Mr. Keswick seconded that 30 of the balance be placed on fixed deposit. Carried.

Mr. Hall took the chair vacated by Mr. Keswick, and the presentation of a handsome smoking set as a memento to Mr. Keswick on his departure for Hongkong, took place.

The following is the statement of working account of the Mosquito Yacht Club for the year ending 30th November, 1903.

W. G. PETER, Auditor.

Yokohama, November 30th.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

LORD ROBERTS.

London, December 11.

Lord Roberts denies the rumours of his pending retirement.

GERMANY'S MANCHURIAN POLICY.

London, December 11.

Count von Bülow, the German Chancellor, speaking in the Reichstag, said that there was no part of the globe in which Germany was so little concerned as Manchuria. All risk of complications there was excluded as regarded Germany, since Germany's policy there was as circumspect and peaceable as possible. If, however, Germany should be involved in a conflict, it would not be her fault.

Referring to Socialist attacks on Russia, Count von Bülow declared that he would not allow himself to be deterred from cherishing most assiduously German relations with Russia.

H.M.S. "FLORA" REFLOATED.

London, December 12.

The British cruiser *Flora*, which went ashore at Denman's Island, British Columbia, a few days ago, has been refloated.

NARROW ESCAPE OF QUEEN ALEXANDRA.

FIRE AT SANDRINGHAM.

Miss Knollys, one of Queen Alexandra's Ladies-in-Waiting, occupying a bedroom underneath the Queen's at Sandringham, awoke at 5 o'clock in the morning to find the room filled with smoke. She hurriedly aroused the Queen, and both rushed out attired only in their dressing-gowns. They had only reached the staircase when the floor of the Queen's bedroom collapsed.

The fire is attributed to an electric wire igniting a beam in Miss Knollys' room, whence it spread to the floor joists. The fire was confined to the two rooms.

The King was visiting Lord Iveagh at the time, but the Queen promptly sent him a reassuring message.

THE FAR EASTERN SITUATION.

London, December 13.

A marked discrepancy continues to appear between the reports from Tokyo and St. Petersburg, but it is noteworthy that Japanese stocks are rising to-day in London and on the Continent. Declarations from St. Petersburg are most pacific.

PRESSED BY COMPETITION.

The Peninsular and Oriental Steam Navigation Co. have decided, owing to the competition of the Siberian Railway, to considerably reduce the fares to and from China on January 1st.

THE REICHSTAG.

The Reichstag has approved of a bill extending the commercial agreement with Great Britain for two years.

A FRENCH VIEW OF THE CRISIS.

London, December 14.

M. Delcassé, speaking in the Chamber of Deputies, said he felt certain Russia and Japan would arrive at an agreement satisfactory to both.

MOROCCO.

Mr. Delcassé also said that any French advances in Morocco must be of an economic and pacific character.

THE KAISER'S ILLNESS.

The Kaiser has appeared in public for the first time since the operation was performed upon him.

REFORMING THE BRITISH NAVY.

London, December 15.

An important Admiralty order has been issued which reduces by periods varying from two to three and one-third years the terms of non-service which entail the compulsory retirement of all officers. It also limits the periods of shore employment to five years. As a consequence, by 1907 the active list will be gradually increased to 12 admirals, 22 vice-admirals, 55 rear-admirals, 253 captains, 373 commanders. The order is favourably received as being calculated to stimulate zeal, accelerate promotion, and above all, promote the survival of the fittest.

THE VICEROY'S TRIP.

The *Novoe Vremya* publishes a dispatch from Vladivostok saying that Admiral Alexieff has postponed till January his visit to St. Petersburg.

THE KAISER AND HIS POLICY.

Later.

The German Emperor has received the officials of the Reichstag and, addressing

them in a strong and unaltered voice, emphasized the necessity of Germany participating in oversea politics and the importance of cotton cultivation in the colonies.

BRITAIN AND THE FAR EASTERN SITUATION.

London, December 16.

An unexpected meeting of the Cabinet was held on the 15th. It is believed that Ministers discussed the situation in the Far East.

FORTHCOMING BY-ELECTIONS.

Great interest is felt in four forthcoming elections, namely, Lewisham, Dulwich, Ashburton, and Ludlow. The Government's fiscal policy is the main issue.

ALLEGED MALTREATMENT BY A GERMAN OFFICER.

Later.

The trial of Lieut. Schelling for maltreating a soldier has begun at Metz, with closed doors. The indictment cites 978 cases of maltreatment.

THE SERBIAN ASSASSINATIONS.

London, December 17.

Since the assassination of King Alexander the British Government has refused to recognize the new Government of Serbia. Other Powers are now beginning to take a similar course by giving their representatives prolonged leave of absence, which will continue till King Peter's regicide counsellors have been dismissed.

THE BYE ELECTIONS.

The elections have resulted in the return of Dr. Rutherford Harris (Conservative Chamberlainite) for Dulwich, the poll being: Harris 5819, Masterman (Liberal Free-trader) 4382. At Lewisham Coates (Conservative Chamberlainite) was returned with 7709, Cleland, (Liberal Free-trader) receiving 5698. There is no change in the political occupancy of the seats.

CHAMBERLAIN VICTORY.

The elections are generally regarded as a striking victory for Mr. Chamberlain.

THE MISSION TO THIBET.

The mission to Thibet made its first march over the Jelet Pass unopposed. The local officials after entering a protest gave Colonel Younghusband a formal but friendly reception.

CHAMBERLAIN'S CAMPAIGN.

Mr. Chamberlain concluded his provincial campaign at Leeds, where he had a most enthusiastic meeting.

MALTREATMENT IN THE GERMAN ARMY.

Lieut. Schelling was sentenced to 15 months' imprisonment and a sergeant was sentenced to 5 years' imprisonment and expulsion from the army for 1,520 cases of maltreatment.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH STRIKERS.

Saigon, December 11.

The Senate has adopted a project of law voted by the Chamber of Deputies granting amnesty to persons convicted of being connected with strikes.

SERIOUS STRIKE OF WORKMEN.

At Lyons, 10,000 preparatory workers and dyers of silk have gone on strike. They demand an increase of wages and readjustment of work. Some demonstrations have occurred.

THE DREYFUS CASE.

The reporter of the Advisory Committee of the Dreyfus affair will present the report of the Committee's deliberations next week.

JAPANESE AFFAIRS REPORTED
IN EUROPE.

Saigon, December 13.

The Emperor of Japan opened the Diet in person. The House of Representatives in reply to the speech from the Throne unanimously voted an address censuring the domestic and foreign policy of the Government. This unprecedented fact has caused much comment.

A FRENCH VIEW ON THE FAR
EASTERN QUESTION.

Saigon, December 14.

M. Delcassé, Minister of Foreign Affairs, advocating his budget before the Financial Committee of the Senate, stated his conviction that Japan and Russia would come to a satisfactory settlement of their differences.

(FROM THE "DEUTSCHE JAPAN-POST.")

THE KAISER.

Berlin, December 14.

Kaiser Wilhelm yesterday visited the theatre for the first time since his illness. His health is satisfactory.

FAR EASTERN AFFAIRS.

Berlin, December 15.

The report that the Chinese Minister to Berlin, Lieutenant-General Yin-Chang, is recalled, in order to introduce military reforms in his country according to the German style, is untrue.

The dissolution of the Japanese parliament is considered in Europe to mean the strengthening of the situation, and can only assist in peacefully continuing and concluding the Tokyo negotiations.

SERVIA AND THE POWERS.

The ministers of the three Empires of Germany, Austria and Russia will not proceed to the Court of Belgrade, until King Alexander's murderers have been punished.

GERMANY AND DENMARK.

A visit of the King of Denmark to Berlin is contemplated.

GERMAN SOCIALISTS AND THE
CHANCELLOR.

The speech of the German Chancellor Court, Bülow, against the Socialists, which he gave in the Reichstag last week, still occupies the interest of all politicians. All papers are writing articles concerning the same, and the journalists of the non-socialistic parties express themselves in the most complimentary terms. The Kaiser himself has assured the Chancellor of his appreciation. Count Bulow received yesterday a deputation of the working class with whom he had a most friendly conversation and to whom he promised that the social and political wishes of the labourers should be taken into the most careful consideration.

THE KAISER.

Berlin, December 16.

Kaiser Wilhelm yesterday received the President of the German Reichstag, Count Ballestrem, and the two Vice-Presidents. Count Ballestrem stated afterwards that the Emperor has recovered his usual vivacity and that his voice is as plain and clear as ever. The Kaiser mentioned that it is a necessity for Germany to participate in a world-policy. He dwelt on the importance of Kiautschow and the African colonies and pointed out that in these countries railways would aid the development of the same, being of vital importance.

SOCIAL DEMOCRACY.

Chancellor Count Bülow has spoken a second time in the Reichstag against Social democracy. He called on all parties to combine against tendencies which would lead to the overthrow of the Empire.

THE NEGOTIATIONS.

The French and English press now agree with the German papers that the dissolution of the Japanese Parliament will prevent hitches which might disturb the pending negotiations.

YOKOHAMA: SATURDAY, DECEMBER 26TH, 1903.

SUMMARY OF NEWS.

THE *Kokumin* states that the Russian Consul at Hakodate left there on Dec. 22nd for Tokyo.

THE winter is setting in early this season, snow falling in Yokohama during Sunday afternoon.

MAJOR HIGASHI has been appointed on a mission to India. He will leave Tokyo on Jan. 9th.

GENERAL KUROPATKIN gave gold watches to four students of the Military Senior School, and these were delivered on Dec. 7th.

TRAINS collided on Dec. 22nd at Takata station, Niigata Prefecture. Some damage was sustained by the cars but there were no casualties.

A CENSUS just completed in the Philippines, puts the total number of natives at 6,976,574, of which 650,000 belong to the wild tribes.

A TELEGRAM from Toyama reports that owing to heavy snow, two houses were destroyed on Dec. 20th and one of the occupants was killed and two injured.

IN accordance with the arrangements at present made it is estimated that the Australian Commonwealth will expend about a thousand pounds for

each and every member returned to the Federal Parliament.

OWING to the present heavy snow, traffic on the Kashiwahara-Takata (Nagano prefecture) and Chuetsu (Toyama prefecture), railway was suspended since Dec. 21st.

THE *North German Gazette* says the German Colonial Estimates for 1904 show that the revenue and expenditure balance at \$9,620,590, an increase over 1903 of \$515,345.

A RAT caught on Dec. 17th at the godown of the Nippon Yusen Kaisha, Kayaba-cho, Tokyo, was found on the following day by the sanitary authorities to be have plague bacteria.

A TELEGRAM from Matsumoto, Nagano prefecture, states that three men murdered another on the night of Dec. 18th at a small inn there. The culprits were subsequently arrested.

S. IRO (24), a farmer living at the village of Kamiomi, near Mito, murdered his wife on the night of Dec. 18th and committed suicide. The details of the crime are not yet given.

MR. YAMADA, Japanese Consul at Lyons, telegraphed on Dec. 19th that the strike of workmen employed in the weaving factories, continues, and that there is no change in the raw silk market.

THE wireless telegraph between Nagasaki and Kelung, Formosa, which was under trial by two engineers of the Department of Communications, is reported by the *Asahi* to have proved effective.

THE Nippon Yusen Kaisha's *Ceylon Maru*, which had been under construction at the Nagasaki Shipbuilding Yard, was launched on Dec. 19th. She will be employed on the Bombay line, and is of 5,000 gross tons.

WE regret to learn that Capt. A. E. Moses, of the *Yawata Maru*, is compelled through illness to stay ashore this trip. The *Yawata Maru* left for Australia on Saturday with Captain S. J. G. Persons in temporary command.

THE Kaiser has decorated General Terauchi, Minister for War, with the First Order of the Red Eagle, and the King of Italy, Major-Generals Fukushima and Tsukamoto with the Second Class of the Order of the Crown.

ACCORDING to an official telegram from Taipei, Formosa, a case of plague was reported on Dec. 15th at Kagi. From the first appearance this year the total number of cases is calculated at 869, and out of them, 702 proved fatal.

THE authorities of the Department of Agriculture and Commerce gave approval on Dec. 22nd, through the Kanagawa Kencho, for the establishment of the Yokohama Foreign Board of Trade (formerly the Foreign Chamber of Commerce) as a juridical person.

A TELEGRAM from Nagasaki to the *Jiji* reports that according to information brought by a Russian steamer, which arrived there on Dec. 21st from Port Arthur, a rumour to the effect that General Kuropatkin was about to take the place of Viceroy Alexieff prevailed at the latter place.

THE Captain of the steamer *Hyogo Maru* from the Bonin Islands (Ogasawara-jima) on the 21st informed the Harbour police at Yokohama that Mr. Harry James Omura (30), a naturalized Japanese, one of the passengers, committed suicide

by drowning himself during the voyage. The cause is not known.

By way of illustrating the effect of poverty on infant mortality, a German statistician says that among the aristocratic circles in Berlin only 57 1,000 of the children die before they reach the age of five, whereas, among the poorest classes, the number of doomed children is 357 per 1,000.

THE Railway Industry Bureau, reports the *Yokohama Shimpō*, intends to complete the construction of the Central and Oshu lines at a cost of yen 6,268,000 within the next year. The former line will be opened for traffic in August and the latter in January, 1905.

A BEAUTIFUL statue of the Saviour, about seventeen feet high, sent from Denmark, has been erected on the right of the steps of the approach to the Royal Mausoleum at Frogmore, near Windsor Castle, at the expense of Queen Alexandra, in memory of Queen Victoria, "the best of mothers-in-law."

LEBAUDY's steerable balloon has just achieved another success in France, having travelled thirty-four miles in an hour and 41 minutes. During the journey high cross-winds were encountered, but the balloon reached its destination in safety and without being deflected from a practically straight course.

A BERLIN dispatch of Nov. 28 said: All the officers, except three, of the battalion stationed at Forbach, the scene of Lieutenant Bilsen's novel, entitled "A Little Garrison," are either ill or on leave. It is said that every officer of this battalion will be transferred or obliged to resign, in consequence of Bilsen's revelations.

HEAVY SNOW has fallen since Dec. 15th at Takata and in other districts of Niigata prefecture. Traffic on the railway between Hachisaki and Kakisaki has been suspended. Telegrams dated Dec. 17th from Maizuru, Takamatsu, Kurume, Kumamoto and other western places announce that snow also fell there.

A DISPATCH from Dresden to the *Lokalanseiger* says a coachman accompanied Princess Alice, wife of Prince Victor Frederic of Schoenburg-Waldenburg, but she actually eloped with an Italian officer with whom she has had a *liaison* for some time. The princess left the prince with the latter's knowledge after he had instituted proceedings against her.

MR. GREEN, the Secretary of the English Rural Labourers' League, has just published a leaflet showing that the number of farmers and agricultural labourers in England and Wales has seriously decreased during the last fifty years, the statistics showing that in 1851 the number was 1,670,000 as against only 981,633 in 1901. Similarly in regard to the acreage under wheat, which in 1866 was 3,350,300 as against only 1,581,587 acres in 1903.

THE British Admiralty has issued for general information a return of the annual prize-firing from heavy guns in His Majesty's Fleet during 1902, giving a list of the ships in order of merit, and showing the average relative results for each class of gun. For the 12 in. B.L. guns H.M.S. *Ocean* came out first of nineteen vessels with average relative results per gun of 70.13; for the 9.2 in. guns H.M.S. *Cressy* was second out of four vessels with average relative results per gun of 35.55; and for the 6 in. quickfiring guns the *Ocean* was first out of forty-eight vessels with average relative results per gun of 102.73.

FOREIGN POLITICS.

Saturday, December 19.

According to a telegram to the *Asahi Shimbun*, the *Novoe Vremya*, in its issue of the 13th instant, contained a semi-official statement of the position taken by Russia. That position is that with regard to Manchuria Russia will not in any way recognise Japan's right of interference, the matter being one that concerns China only; and that with regard to Korea the St. Petersburg Government has made a large concession to Japan but will insist upon occupying an equal political footing with the latter in the peninsular empire.

Our Tokyo contemporary observes with apparent justice that since Russia's answer to Japan's proposals of October 30th was presented by Baron Rosen in Tokyo on the 11th instant, and since the *Novoe Vremya's* article is dated the 13th, it may be assumed that the article outlines with tolerable accuracy the facts of the answer. Russia's position all along has been that she holds Manchuria in virtue of her operations against the Boxers in 1900, and that whether she restores any part or the whole of it to China is a matter for her own sole and unquestionable decision. With regard to Korea, and the large concession to Japan spoken of by the *Novoe Vremya*, the *Asahi* opines that the magnitude of a concession may vary greatly according to the spectacles through which it is viewed. What Russia considers considerable, Japan may find quite insignificant, and such would seem to be the case when it is observed that Russia insists upon securing an equal political position with Japan in the Korean peninsula. That arrangement does not appear to include so much as a microscopic concession to Japan, and that it should satisfy even the weak-backed politicians who are willing to surrender what they ought to have in Manchuria for less than what they already have in Korea can not be credited.

The air continues to be full of rumours about military and naval movements in Japan, and about a conference of statesmen in the presence of the Emperor. These are all conjectures. It is plain that none of the news-collectors has been able to lay his hand upon anything tangible. It is also pretty plain that nothing very tangible exists to be handled. When military and naval movements commence in earnest, if that unhappy conjuncture should arise, there will be no room whatever for doubt in the mind of the public.

Another utterance attributed to the *Novoe Vremya* is that Russia has definitely rejected Japan's proposals of the 30th of October. It is supposed that the Cabinet Council held in London on the 15th instant had reference to that news.

The *Shogyo Shimpō* states that a long telegram has been sent from the Foreign Office in Tokyo to the British Government, but of course it is not credible that telegrams with regard to the situation are passing between Kasumigaseki and Downing Street over the head of Koji-machi.

The same journal, endorsed by the *Hochi Shimbun*, alleges that Marquis Ito's demeanour at the recent Council of statesmen was unprecedentedly strong. His Excellency let it be plainly seen that he thought the time had come to demand a definite settlement. Baron Kodama also is reported to be showing much activity. All these statements may rest on slender foundations, but their number and consistency certainly indicate that the situation is becoming

strained. It is not conceivable that the Japanese nation will continue to obey the control of peace-at-any-price politicians if it become imbued with the conviction that Russia is merely acting the part of the aggressor in possession.

A telegram published by the *Shogyo Shimpō* says that the Japanese four-percents dropped on the 16th instant from £84 10s. to £82 12s. 6d.; an ominous indication of the view held by British financiers. In Tokyo, however, there are no signs of anything like apprehension among share-holders or stock-jobbers: prices are generally unchanged, and some show an upward tendency.

The *Kokumin Shimbun* has a very interesting article which contains something very like revelations. It says that there have been four meetings of the Elder Statesmen and the Cabinet Ministers. The first was on the 23rd of June. What passed is not known with any certainty but there are good reasons for thinking that the general outlines of a policy were then agreed upon; namely, that Manchuria must remain under Chinese sovereignty and be kept open to the trade of the world and that Korea must come under Japan's protection. The second meeting took place on the 13th of October, and had for object the determination of measures for giving effect to the above policy, as to which there had not been any change in the interval. These measures took the immediate form of draft proposals to Russia, which were considered by the same council at a third meeting on the 24th of October, and, having been approved, were laid before the Russian Government on the 30th of that month. Russia took no notice of these proposals until the 11th of December, an interval of 42 days, when she conveyed through her Tokyo Representative a reply which neither wholly rejected Japan's proposals nor evinced any disposition to accept them. This led to the further council on the 16th instant, when it was definitely resolved to employ potential and effective (*yuryoku jukō*) measures for carrying out the programme formulated on the 30th of October. In this course—our contemporary continues—Japan has the approval of the civilized world, and it is plain that she must cease to rely on mere interchanges of verbal communications. She has to show that she is in earnest.

In this context our contemporary notes that the financial position of Japan, so far from being unfavourable for belligerent purposes, is exceptionally strong. At the outbreak of the China-Japan war in 1894, Europe predicted that financial exhaustion would beat Japan in the end. The prophecy proved altogether fallacious. Yet it is repeated to-day with regard to a possible Russo-Japanese collision. To-day, however, there is less reason than ever for such pessimism. The truth is that Japan stands now in an altogether different financial rank from that occupied by her in 1894. She has a sum of specie amounting to 113 million *yen* lying in the vaults of the Central Bank; such a sum as she never had before, and while some Western countries have been troubled by a drain of specie no such embarrassment has overtaken her. The rate of interest, again, which stood at from 3 *sen* to 3½ *sen* daily last year is now quoted at 1.7 *sen*. Turning then to the note-issuing power of the Bank, the *Kokumin* observes that in spite of the close of the year when there is invariably a large run on the Bank's resources, its margin of note-issuing

power stands at 35 millions of *yen*, so that, in point of fact, the Bank may be expected to be soon in a position to issue from 40 to 60 millions worth of notes. With reference to last year's sale of bonds abroad, the public have been in doubts as to the manner of disposing of the money. The facts are that the greater part is lying in London in the form of specie, the Central Bank being its holder and having lodged exchangeable notes with the Treasury for a corresponding amount. Such are the facts as to the money market. Now concerning the Treasury, it is to be noted that the Budget for the pending fiscal year—the Budget which the Diet's dissolution prevented from coming into existence—showed a total revenue of 225¼ million *yen* against an expenditure of 183½ millions. The surplus of 41¼ millions was to have been applied to various undertakings, but could all be used for warlike purposes in case of need. Then there are the three Capital Funds amounting to 50 million *yen*, one half of which is in ready money, and the only liability the Government has is 10 million *yen* of Exchequer Bills, whereas formerly it was constantly hampered by the question of bond issues. Finally, the dissolution of the Lower House has had the result of leaving all these funds at the Government's free disposal.

Monday, December 21.

Japanese journals advance two opposite views as to the progress of the negotiations. Some allege that Japan has already addressed a species of ultimatum to Russia, or, at any rate, has asked the latter to give a definite decision within a certain fixed period; others, and these seem to deserve greater credence, deny that there has been any meeting between Baron Rosen and Baron Komura since the last council of statesmen. These latter journals say that Russia will be asked to reconsider her recent reply. Meanwhile Baron Rosen is very far from well. He has been troubled of late with acute pain in the ear and is now suffering from influenza. Whether he is incapacitated for the immediate discharge of diplomatic duties we do not know, but it is certain that he has been attacked by one of the severe colds now almost epidemic.

It need scarcely be said that, for the rest, all kinds of rumours are circulating. We need not retail them, for they obviously rest on the slenderest bases of conjecture.

On Friday last Marquis Oyama, Admiral Yamamoto, the Prime Minister, the Minister of State for Foreign Affairs and the Minister of State for War, all visited the Palace and made a detailed report of the situation to the Emperor. Tokyo newspapers state that in the sequel of the last meeting of Ministers and Elder Statesmen, it was decided to communicate direct with the Russian Government through Japan's Representative in St. Petersburg, asking that Russia should reconsider her late answer to Japan's proposals, a communication as to that step being addressed simultaneously to the British Government through Viscount Hayashi. It is added that a time has been fixed by Japan for Russia's reply, but, on the other hand, we are told, after the manner of a conjecture, that an answer will probably be received by the close of this month. If it be an unsatisfactory answer, then the negotiations will be broken off, say the journals from which we quote. It is manifestly erroneous to suggest that negotiations hitherto conducted in Tokyo between Barons Komura

and Rosen have been suddenly transferred to St. Petersburg.

The *Hochi Shinbun* is engaged manufacturing a mare's nest out of the affair of the Chilean war-ships. It alleges that the British Government was acting in the capacity of go-between to secure the vessels for Japan; that the Government in Tokyo, anxious to avail itself of such an opportunity, virtually agreed to make the purchase and instructed Viscount Hayashi in that sense; that at the eleventh hour Admiral Yamamoto raised objections to the transaction; that Viscount Hayashi had to "cry off"; that the British Foreign Secretary evinced unbounded astonishment at Japan's breach of faith, and that Viscount Hayashi addressed to Tokyo the strongest remonstrance ever telegraphed by a Japanese Representative to his Government. What a tale it is, to be sure! The *Hochi Shinbun* evidently believes that the British Government acts the part of broker for private firms desiring to sell war-ships and that the Japanese Government commits itself to promise the purchase of such commodities without consulting the Naval Department. We were not prepared for such undiluted silliness in the columns of the *Hochi*. The plain facts have already been narrated in these columns. They bear no sort of resemblance to our Tokyo contemporary's story.

Tuesday, December 22.

Oiso is for the moment the cynosure of observation. Marquis Ito and Marquis Yamagata were residing there until the 20th instant, when the former left for Tonozawa. Baron Kodama, Lieut.-General Terauchi and other statesmen visited Oiso on Sunday, and of course the fact has suggested some surmises. But we imagine that nothing has occurred, or is immediately likely to occur, to lift the great question out of the groove of ordinary diplomacy.

The *Chuo Shinbun* alleges that two steamers belonging to the Mitsui firm have been chartered by the Government on naval business.

In the *Hochi Shinbun* we find a number of disjointed items; skeletons of news which our contemporary declares its hesitation to invest with flesh and skin. They point to organization of the Kyushu Railway for purposes of military transport, and to various other incidents suggestive of warlike preparations. The *Yomiuri Shinbun* has an item to the effect that the Naval College will be closed in a few days, the inference implied being that all the officers attending the College have to join their ships. The *Densho Shinbun* adds its quota of sensations. All these statements merely imply that Japan is continuing her preparations vigorously.

In the *Kokumin Shinbun* there is a very strong but moderately worded article. It sets out by saying that the time for negotiation has almost passed, and that Russia, so far from appreciating Japan's peaceful intentions, has misconstrued them as signs of weakness and sought to take advantage of them in her own interests. This country, therefore, has no recourse but to show that there are limits to the concessions it is willing to make in the cause of tranquillity. Russia may perhaps find that under a gentle demeanour there lies an indomitable resolve. The article then proceeds to speak of Korea as though that country were the pivot of the situation, which undoubtedly it is. We observe that, in this context, the *Kokumin* adopts a line of argument set forth several times in our own columns, namely, that with whatever purpose Russia undertook

her operations in the Yalu Valley, they had the evident disadvantage, from her point of view, of supplying a pretext for Japan to assert her own position with emphasis from which under other circumstances she would have shrunk. Considering all that Russia has done on Korea's northern frontier during the past twelvemonth, and considering that she can not now persuade herself to be more generous than to propose an arrangement which would convert the peninsular empire into a seed-plot of unceasing intrigues and dissensions, she may be said to have warranted any step which Japan may consider to be dictated by her vital interests now seriously menaced. Should the present situation be tamely endured, says the *Kokumin*, there can be no limits of endurance. Should the present Ministry fail to take action in the face of such provocation, they will deserve to be regarded as "the bones of a dead horse."

The *Fiji Shimpō* replies to the *Novoe Vremya's* latest utterance, namely, that Russia can not allow any third Power to have a voice in the settlement of the Manchurian question, and that she can not even recognise the southern half of Korea as Japan's sphere of influence, inasmuch as her own communications between Vladivostok and Liaotung would thereby be threatened. The *Fiji* is very temperate in tone. It does not counsel the cessation of negotiations with Russia. She should be asked with all sincerity to reconsider her reply. But if she fail to do so in a spirit of fairness, Japan's hands will then be free to take whatever steps may seem necessary. Our contemporary then reminds the St. Petersburg journal that the war of 1894-5 was fought by Japan to secure the independence of Korea which Japan deems, and has always deemed, essential to the security of her own national existence. It was in pursuance of the same policy that she took Liaotung in the sequel of the war, her strategists and her statesmen being convinced that such a step was essential in order to avert the establishment of a strong aggressive Power on Korea's borders. Russia has deliberately ignored this law of Japan's existence and apparently expects Japan to ignore it. Not otherwise can we account for the contention that Japan's voice must not be heard with regard to the fate of Manchuria, or for the contention that Russia claims equal rights with Japan in the protectorate of Korea, a contention prefaced during the past year by acts which show clearly what interpretation Russia puts upon her own privileges as a neighbour. Japan can not possibly forego her rights in Korea, but she will not assert them by force until compelled to do so. The fact of compulsion will be established should Russia's second answer show inability to understand the situation or determination to misunderstand it.

The *Asahi Shinbun* quotes an anonymous German authority as pointing out the enormous disadvantages under which Russia would labour did she engage in a war without access to any docks other than those now available to her. The Port-Arthur dock is the only one that offers its services, and many of her war-vessels are already in urgent need of being docked. The same authority speaks of difficulties connected with a supply of coal. But all this is an old story. Its lesson is that Russia will not readily draw the sword against Japan, though St. Petersburg naturally

M. Elisee Reclus has a most interesting article in *La Revue*, bearing on the subject

of Pan-Slavism and Russian Unity, which *Public Opinion* translates in part as follows:—

On the eve of events of the greatest importance—events in which Russia will play a major part if she does not precipitate them—it will be interesting to sketch the general relations of the "Colossus" to the Slav world. For notwithstanding the marvellous machinery of Russian unification through oppression, she suffers from interior ethnic disorganization, the terrible gravity of which will be shown the first day of a serious reverse for the Czar's government.

As long ago as 1825 a Russian philologist discovered the Slav nationality of the Bulgarians, then other scholars similarly discovered the relationship of the Servians, the Croats, the Czechs, the Moravians, and the Montenegrins, while the Poles were excluded from the great company because their national patriotism rendered them unworthy of entering the great Russian family. The Russian pan-Slavists had every reason to make their great empire attractive to western Slavs in order that it might pose as their protector at some opportune moment. But the capital obstacles to the spread of pangermanism is present in the case of pan-Slavism in full force and is even more difficult to discard. The despotic character of the empire from every point of view, traditional, military, administrative, and religious, repulses at the outset any spontaneous gravitation toward it. The relatively civilized western world can not feel drawn toward an autocratic monarchy.

The Czechs and the Moravians may experience a certain pride of race in thinking that they are related to the Slavs of Russia, but at the same time they know that their civilization in its ensemble is superior to Russia's, and they would not at any price exchange their lot for that of the Poles. In the same way, Servians, Croats, and other nationalities, while complaining of their present lot, know well enough that they have nothing to gain by allowing the Muscovite to become their master. Thus pan-Slavism is naturally viewed with little favour by the western Slavs, and the only field for the movement is eastward, not by annexation of peoples of apparently the same race, but by the conquest of the tribes and nations of Asia, of the Turks, the Mongolians, and the Chinese.

In Russia itself the only members of the family who never think of the disruption of the empire are the aboriginal races, who have lost forever all national feeling and become merged in the Russian mass, the willing slaves of the existing régime. Active hostility is present in Poland, which contains a twelfth of the population of the empire; on the borders of the Baltic, in Finland, and in the Transcaucasus. These facts surely justify the statement that Russia is by no means the homogeneous state that so many of us imagine her to be. She possesses within herself the seeds of disintegration which, as stated at the beginning of this article, will some day bear the fruit of disorganization and weakness. Her eastern conquests have also weakened rather than added to her strength, for the Kirghizes, the Tibetans, the Afghans, the Mongolians, and other peoples that have been vanquished and enslaved in the course of the Russian advance to the Pacific are elements of no value to the empire.

Wednesday, December 23.

Baron Rosen's illness continues to render it impossible for him to leave the Legation, and accordingly Baron Komura repaired thither on the 21st instant to transmit Japan's answer to Russia's reply, which, as our readers doubtless remember, was formulated on the 11th instant. There can, unfortunately, be no manner of doubt that after 40 days reflection the reply made by Russia showed no appreciable spirit of conciliation. Any concessions made by her to Japan were of the most trivial and insignificant character, the essentials in dispute being left untouched. The *Fiji Shimpō* referring to this matter, does not undertake to state explicitly what were the exact terms of Russia's response, but goes so far as to allege that they may be pretty clearly inferred from the language of the *Novoe Vremya*, which speaks of Manchuria as having no manner of concern for Japan, and declares that Russia can not consent to efface herself even in the south of Korea, since she would thus be exposing her Liaotung-Vladivostok communications to the danger of being cut. It is not conceivable that Japan could tamely agree to be thus quietly thrust aside: to be told, in short, to mind her own business, so far as Manchuria is concerned, and to be placed in a worse position with regard to

Korea than that now actually occupied by her. In all sincerity, therefore, she has asked Russia to reconsider the situation. Should reconsideration lead to no more satisfactory terms, then unhappily nothing will remain except an appeal to the sword. Such in fact is what the *Jiji* says, and we account it a true presentation of the circumstances.

What suggests itself to onlookers is that Russia has fallen into the error of imagining that Japan will not fight. Otherwise it is hard to understand the nonchalance shown by St. Petersburg and its manner of trifling with Japan's proposals. Yet did the statesmen of St. Petersburg consider the question carefully, they would see that this is a matter of life and death to Japan, whereas to Russia it is merely an episode in a gigantic programme of aggressive empire-building. If Japan allow herself to be effaced now, it means permanent effacement. It means that she must either step out of Korea, where her interests enormously outweigh those of all the other Powers put together, or engage there in a struggle of intrigue and complication which can not fail to end either in war or in final expulsion. No one seriously imagines that she will submit to such a humiliating sacrifice of her interests. Even supposing that the things said of the present Japanese Cabinet by its enemies were true, even supposing that the Ministers of the Crown and the Elder Statesmen were disposed to endure any natural disgrace rather than to draw the sword, there remains the Japanese nation which has very clearly displayed its mood. We can scarcely think that Russia labours under such a gross misapprehension, yet no other hypothesis fully accounts for her procedure.

It need scarcely be said that the opposition journals are growing more and more vehement in their denunciations of the Cabinet. They ridicule the prospect of another conference in the Emperor's presence, and ask what on earth is the use of more talk and nothing but talk. Some allege that the Elder Statesmen are now strongly in favour of war and that the real weaklings are the Ministers of the Crown. Others allege that the members of the House of Peers have at length recognised the blundering policy of the Ministry and the game made of it by Russia; whose European pretences of pacific convictions and pacific proposals have been merely dust thrown in the eyes of the world.

Rumours continue to be circulated about the collection of transports and about orders issued to military and naval commanders. We have already alluded to the sharp fall in all kinds of securities that took place on the Tokyo stock market last Monday. Some figures may be interesting:—

	19th inst.	21st inst.
Japan Railway	78.15	78.10
Kwansei Railway	41.50	40.10
Kyushu Railway	58.50	57.60
Tanko Railway	76.00	74.00
Boso Railway	11.30	10.90
Narita Railway	29.90	28.50
Keifu Railway	14.00	13.85
Densha Tetsudo	102.70	98.90
do new Shares	87.40	82.80
Keihin Denki	58.80	58.60
Han-Shin	42.30	38.70
Denki Tetsudo	58.50	56.00
do new Shares	20.90	18.20
Shigai Tetsudo	82.10	80.10
Yusen Kaisha	82.00	81.35
Toyo Kisen	33.00	32.00
Gas Kaisha	98.40	96.20
do New Shares	97.20	93.90
Dento Kaisha	92.50	89.90
Kanegafuchi Spinning	38.30	37.55
Seito Kaisha	48.00	46.00
Shohin Torihiki	46.50	45.20
Tokyo Stock Exchange	172.50	168.00

From London also comes news that on the same day the Japanese war bonds fell to £92.17s. 11d., a decline of over £2; the 5 per cent. Consols to £91, a drop of £3.10s., and the 4 per-cents to £81, a fall of £2.15s.

A rumour was recently circulated in Peking, says the *Asahi Shimbun's* correspondent, to the effect that Russia having appointed a Viceroy of her Far-Eastern dominions Great Britain was about to follow suit by nominating a Viceroy of her sphere of influence in the Yangtse Valley. No sensible person can have attached any moment to such an obviously silly story, yet our contemporary's correspondent adds that in consequence of the delay in settling the Manchurian problem, even this ridiculous story has become a source of uneasiness among the Chinese.

Thursday, December 24.

Rumours of all kinds continue to be rife. Various visits of leading statesmen to the Palace are reported, and large purchases of coal by Russia and Japan are said to be taking place. Special importance seems to be attached to an audience given by the Emperor to Count Inouye. But we imagine that the situation is simply one of expectancy. Russia has been asked to reconsider her reply and if she decline to do so, the moment will have come for Japan to adopt a decisive course. But we do not believe that things will follow any such cut and dried route. Unless Russia departs signally from the procrastinating procedure hitherto adopted by her she will endeavour to postpone a definite reply on one pretext or another, and it is always easy to devise pretexts which Japan can not ignore without exposing herself to the charge of precipitancy or impatience. Already indeed it is said that Count Lamsdorf's inability to gain access to the Tsar for the purpose of discussing the Far-Eastern problem has been assigned as a probable cause for fresh delay. It is hard to believe that any such flimsy excuse has been advanced, but neither can we possibly avoid the conviction that Russia is purposely putting off a settlement, unless it be a settlement on her own terms. Considering that this period of factitious delay is utilized by her diligently for the purpose of pushing forward naval and military re-inforcements to the East, the Japanese nation can not reasonably be expected to quietly await Russia's convenience much longer. But for the moment, at all events, it would be an error, we are persuaded, to imagine that anything in the shape of an ultimatum has been sent or that the situation is by any means hopeless.

Japanese bonds continue to fall in the London market. The four per cents are now quoted at £79, a point never previously approached.

Meanwhile the debacle continues on the Tokyo Stock Exchange. No securities are escaping. The heaviest fall is in the Electric Light Company's shares which in one day descended from 89.90 *yen* to 87. But many other shares show a decline not greatly inferior.

It need scarcely be said that this debacle, which is even more marked in Osaka, is attributable to the persistence of rumours that Japan is about to send troops to Korea; that they will be despatched immediately on provision of winter clothing, and that an intimation in that sense has actually been given to Russia. None of which things we believe.

THE EMPEROR OF GERMANY.

It seems to be fated that the relations between Germany and England should be perpetually disturbed, however little to the advantage of either nation such a state of affairs can be. The Emperor of Germany is a man of enormous ability and energy. He is sincerely admired by Englishmen who, we think, know how to appreciate such high qualities as he possesses. But he certainly is not gifted with prudence. He has often allowed himself to be betrayed into utterances not at all conducive to his country's benefit. His last statement about Waterloo surely belongs to the category of blundering declarations? It is an uncalculated statement, a most ungenerous statement. We do not think that Englishmen have ever sought to withhold from their gallant comrades, the Prussians and Hanoverians, and from the noble commander, Blucher, the fullest measure of credit for the part these took against Napoleon in the latter's last campaign. It is on record that when about to set out on this campaign Napoleon himself said:—"One Englishman may be counted for one Frenchman, but two Dutchmen, Prussians or soldiers of the Confederation are required to make up one Frenchman." Probably Napoleon changed that opinion after Blucher's splendid defence at Ligny. Yet it is undeniable that of the two attacks planned for the purpose of dividing the Prussian and the English armies, that against the former, at Ligny succeeded, and that against the latter at Quatre Bras failed. Blucher's defeat at Ligny compelled Wellington to retire upon Waterloo, where with 72,000 men—only a small part of them being veteran troops—and 186 guns he sustained the attack of 80,000 French with 252 guns. The battle lasted from 11 a.m. until 7.30 p.m. It was not until half past four that Blucher's advance guard succeeded in deploying from the Frischermont woods, and they were not only checked but ultimately driven back by the troops detached by Napoleon for that purpose. Thereafter it was not until half past seven, when the Old Guard under Ney had recoiled from their last attack upon the British centre, that Blucher's standards were seen in the wood beyond Ohain and that his troops took a really effective part in the battle. We do not intend to suggest for an instant that the Prussians could have done better. Their record at that momentous time is as fine as it could be. The share they took in crushing such troops as those of France and such a general as Napoleon is nowhere better appreciated than in England, nor is it, we believe, in the nature of Englishmen to attempt to belittle the merits of their comrades-in-arms who with them faced death and wounds in a good cause. The Emperor William may institute what comparisons he pleases or claim for his countrymen a monopoly of credit if he thinks such flattery necessary. But we Englishmen prefer to remember that in the days of the stout old Blucher and his brave soldiers, such petty jealousies did not weaken the combined effort by which Europe was saved from passing under a military dictatorship.

The Cunard Steamship Co. announces in regard to the recent alleged racing between the *Compania* and the American liner *St. Paul* that so far as the Cunard Co. is concerned there has been and will be no racing. Whether there are mails on board its steamers or not their speed will not be altered. The company's commanders have been most precisely instructed on this subject.

KOREA.

Saturday, December 19.

The Japanese residents of Seoul appear to have held a meeting and to have passed a resolution to the effect that the delay in settling the Manchurian problem is doing material injury to their position and privileges in Korea. It can not be questioned that the framers and endorsers of such a resolution have warrant for their statement, but the force of the protest would have been greatly increased had it been accompanied by some explanation. No one can doubt, however, that Japan's prestige everywhere throughout the East must suffer appreciably if the situation remains undecided much longer. Russia has everything she wants at present. She is doing just what she pleases, and, so far as the world can see, she is treating Japan's protests with precisely the same measure of respect that she paid to her treaty obligations in Manchuria when the date for observing them fell due.

Rumours are renewed about an agreement between M. Pavlov and Li Keun-thaik with reference to the organization of a Korean army and its training by Russian experts, as well as with reference to Korea's finances. It is now stated that for the purposes of these projects, a number of statistics have been handed to the Russian Legation. Is this really credible, or are some news-mongers deliberately trying to accentuate the situation? Direct interference by Russia in the military and financial affairs of Korea would be such a flagrant violation of the Russo-Japanese Conventions as to amount to an open defiance of this empire. M. Pavlov does not work with kid gloves. He has shown that often enough. But we greatly doubt this last episode of his imperial enterprise.

Monday, December 21.

According to an *Asahi* telegram from Seoul, Li Keun Thaik has waited upon the Japanese Representative and has declared that there is no truth whatever in the rumour that a secret arrangement has been concluded between Russia and Korea relating to the organization of the latter's forces and the readjustment of her finances by the former. The rumour, nevertheless, continues to be as persistent as ever.

The Russian Representative in Seoul is said to have addressed an inquiry to the Korean Government as to the reason for the alleged arrival of a body of seventy Japanese soldiers each at Fusan and Chemulpo. This led to an explanation from the Japanese Minister that as it had been decided to establish an office for the purpose of superintending the affairs of the Japanese settlement guards, the telegraph corps and the gendarmes in Korea, thirty engineers each had been despatched to Chemulpo and Fusan in connexion with the project.

It does not appear that the Mokpo fracas has been settled yet. Rumours, circulated from Korean sources, said that when the *Saiyen* arrived, her presence inspired the Japanese labourers to attack the Koreans, with the result that some of the latter were killed and wounded. But subsequent investigations show that so far from death or wounds having been caused, no one was sufficiently injured to prefer any serious complaint or absent himself from his work. Still there seems to be some difficulty in effecting a settlement.

In double-leaded ideographs the *Asahi* publishes a telegram from Seoul saying that the Judicial Department in that city has

ordered the confiscation of all the property of U Pon-som, in consideration of his previous crimes against the State, and, at the same time, has announced the pardon of Ko, U's assassin. It is further contemplated, according to the same information, to confiscate the property of the refugees Cho Wi-yon, Pak Yong-hyo and Yu Kil-sun. That is Korea's method of encouraging the murder of political offenders.

The latest news from Mokpo is that whereas on the 17th instant the indications pointed to an amicable settlement, it was found on the 18th that the Korean labourers still maintained their resolute attitude and declined to go on working unless their alleged grievances were redressed.

Tuesday, December 22.

It is stated (*Jiji Shimpō's* correspondence) that in reply to M. Pavlov's query with regard to the advent of 60 Japanese engineers at Seoul and Chemulpo, the Korean Minister for Foreign Affairs pointed out that this was a matter which concerned Korea alone and did not call for any interference from without. M. Pavlov accordingly carried his question to the Japanese Representative, and was by him informed that a portion of the Japanese engineers already in Korea had been detached for post-office duty, and these sixty men were merely to take the place of the others. It was of course quite right that Mr. Hayashi should afford to his Russian colleague any information asked for by the latter within reasonable limits, but we can not forget that a similar process does not appear to have been followed with regard to any of the various detachments of Russian troops which, during the past few months, crossed the Yalu from time to time into Korean territory.

Wednesday, December 23.

A Belgian syndicate is reported to have obtained a mining concession from the Korean Government at Am-byon in the neighbourhood of Yuen-san.

It appears that there is some dispute between the Americans in Seoul and the Japanese postal authorities, inasmuch as the construction of telephones by the latter is held to be a violation of the monopoly of electric enterprises possessed by the former. It is expected that this matter, which has been for some time on the tapis, will now be amicably settled. Meanwhile the Italian and the French Representatives are reported to be interesting themselves to obtain mining concessions for their nationals.

It is said to have been clearly ascertained by the Japanese Authorities that there is not the smallest basis for the recently circulated rumour that a secret agreement had been concluded between Korea and Russia with regard to the organization of the Korean army and the adjustment of the empire's finances.

A telegram dated the 21st instant at Seoul says that in compliance with instructions from the Korean Foreign Office 10 Korean labourers and 7 Korean employees of the Japanese at Mokpo have been arrested, and orders have been issued for their appropriate punishment, nevertheless owing to incapacity on the part of the examining officials, the trouble is not yet settled.

Thursday, December 24.

The Japanese and British Representatives in Seoul accompanied by the officer commanding the *Chiyoda*, visited the palace on the 21st instant and urged in strong terms that Yong Am-pho be opened to trade. In view of the pressure that has been brought

to bear on the Korean Sovereign in this matter, and in view of the readiness shown by Korea to open Mokpo, Chinampo and other places, it is impossible to doubt that the difficulty about Yong Am-pho is entirely due to Russian opposition. Russian journals, indeed, have frankly admitted the fact, and have assigned as a reason that Yong Am-pho is near the mouth of the Yalu River and that its opening at present might complicate the settlement of the Manchurian question. As to the first of these reasons it must obviously weigh with other Powers in exactly the opposite sense. For the proximity of the place to the mouth of the Yalu and the command of the latter that it confers on the Power in occupation are precisely the considerations that render Russia's presence there unwelcome to Japan primarily and to England and America in a secondary degree. As to the second reason, namely, that relating to the Manchurian complication, its plain significance is that the pretext under which Yong Am-pho was converted into a Russian station in defiance of all lawful procedure, was of the least warrantable nature. Yong Am-pho can not have been regarded originally as a mere lumber-storing position, if within a few months of its alleged seizure for that purpose it has assumed political and strategical importance of a paramount nature. Lord Castlereagh's words in the House of Commons 78 years ago begin to be applicable to the present juncture:—"Some may think that an armed peace would be preferable to a state of war. But the danger must be fairly looked at; and knowing that good faith is opposite to the system of the party to be treated with—knowing that the rule of his conduct is self-interest, regardless of every other consideration, whatever decision you come to must rest on the principle of power and not that of reliance on the man."

Insurgents have again made their appearance in Korea. They call themselves "Tong-hak"—or the Students of the East—but rumour says that they are nothing more than unhappy peasants and middle-class subjects driven to despair by the exactions of the tax-collector. At all events troops have been sent to deal with them, a duty which might almost have been left to the winter season. This is not the time for insurrections in Korea. We can not forget, however, that a rising of Tong-hak was the proximate cause of the war of 1894-5. *Absit omen.*

The preliminary examination of Ko Yong-Keun and No Yun-myong, accused of the assassination of U Pon-som, has been completed and the two men have been remanded for trial on a charge of wilful murder. The facts elicited are that the man Ko had received many favours at the hands of the late Queen of Korea, and that he believed U Pon-som to have been the principal instigator of the plot which ended in Her Majesty's cruel murder. Coming to Japan for the purpose of avenging the crime, he found in Osaka one Yun Hyo-chong, engaged upon the same errand. It occurred to him that he might promote his own purpose by warning U against Yun, which measure had the effect of winning U's confidence completely and obtaining free access to him for Ko and No. The rest is known to the public, but we do not learn how it happened that such a long interval elapsed before the two men were able to consummate their design seeing that the alleged exposure of Yun Hyo-chong's purpose occurred some months before the tragedy was consummated in Hiroshima.

It is easy to understand that the friends and relatives of the unhappy Queen are inspired with feelings of a decidedly sympathetic nature towards Ko and No. Justice, however, can not take count of such sentiments. Unless some extenuating circumstances be discovered, and at present there is no suggestion of anything of the kind, the two men will have to pay with their lives the penalty of their deliberately committed crime. This incident confirms and strengthens what we have often said about the violence that is done to morality by the present international custom in the matter of extradition. Unless it be acknowledged that assassination is a legitimate political weapon, there should be no asylum for the political assassin within the territory of a civilized state.

CHINA.

Saturday, December 19.

The General in command in Mukden is reported to have telegraphed to Peking that the Russians in Manchuria are beginning to show a more placable demeanour.

Apparently the attempts made to convict Prince Tsai Cheng of dissipated habits and to procure his removal from office have been unsuccessful. It is stated that the Court, in reply to these representations and to the Prince's consequent tendering of his resignation, has ordered him to continue in office and to be "diligent."

Shanghai reports that the enterprise of the Russo-Chinese Bank with reference to the new railway in Shensi, projected by a Russian syndicate, has been successful. The problem was to raise a sum of 14 millions of francs, and Paris has welcomed the operation by offering four times the amount furnished. The French alliance is certainly a most valuable property to Russia. Magnificent is the only term to apply to the confidence of French capitalists in the stability and prudence of their ally's enterprises.

Monday, December 21.

The *Jiji Shimpō's* Peking correspondent reports the receipt of a communication by the Chinese Government from its Representative in St. Petersburg to the effect that the Russian Government strongly recommends China to seize the present occasion for making pacific arrangements with Russia in the matter of Manchuria. If this opportunity be lost, another is not likely to occur. The Chinese Representative alleges that his inquiries at the Foreign Office in St. Petersburg have convinced him that these views are really entertained by Russia. They certainly tally with what the *Novoe Vremya* has just been saying, namely, that Russia regards the Manchurian question as limited to herself and China, and that she will not tolerate any interference by a third party.

A report from Haicheng states that the number of Russian troops there at present is 1,500, but that when the permanent barracks now in course of construction are completed, there will be ample accommodation for 3,000.

A Chinese censor, Wang, sees in the British expedition to Tibet an opportunity for pitting Russia against England. He strongly recommends that a commissioner be sent quickly to Lassa to arrange the religious problem in a manner satisfactory to England.

An imperial decree has been issued to the various Viceroys and Governors in China informing them that vigorous measures of reform must be adopted in organizing provincial governments, so as to remove

corrupt and ignorant officials and replace them with men capable of being really serviceable to the Throne. This is not by any means the first decree of its kind that has been issued in China. An eminent historian of the Middle Kingdom has said that theoretically China is one of the best governed countries in the world, but practically one of the worst.

The Taotai whose removal from Antung formed a part of the episodes connected with the re-occupation of Mukden, is said to be now in Peking. He has not yet been received at Court, but he has visited Prince Ching and reported the state of affairs in Manchuria minutely. The telegram (*Asahi Shimbun*) containing this information, has a mysterious item to the effect that this Taotai Yuan is avoiding all intercourse with the Russians in Peking. That seems too natural to be worth telegraphing.

A telegram from London to the *Jiji Shimpō*, dated the 18th instant, says that the tone of the Russian press has become markedly bellicose, and that the language used by the *Novoe Vremya* seems deliberately designed to provoke Japan. The semi-official St. Petersburg organ declares that Japan will not dare to press her proposals; that she has not even the courage to deliver an ultimatum; that Russia must settle the Manchurian question with China alone, not permitting the interference of any third Power, and that even the southern part of Korea must not be internationally recognised as falling within the Japanese sphere of influence, since the Russian communications between Liaotung and Vladivostok would thus be exposed to danger. On the other hand, the *Standard* and the *Globe* express entire sympathy with Japan.

Apparently it has been definitely decided that General Ma, Provincial Commander-in-Chief in Chili, is to be generalissimo of all the forces available for the defence of China in the event of war with Russia.

It is stated that the Russians in Mukden have refused to allow the Literary Chancellor of Fengtien province to hold the annual examination in that city, and have even evicted the chancellor from the gates when he attempted to exercise his functions. As an object lesson in effective occupation nothing could be more striking in Chinese eyes. But of course no object lessons are needed. If China were able to fight she must have fought long ago according to all the dictates of national honour.

Tuesday, December 22.

Lieut-General Teh Ling has arrived in Tientsin on business connected with the organization of the forces which China seems to be really in earnest about raising and equipping for her defence. It is further stated that Viceroy Yuan denies himself to all visitors and devotes his entire time to making arrangements in connexion with military affairs.

Wednesday, December 23.

The *Asahi Shimbun's* Peking correspondent says that the Chinese Minister in Tokyo has telegraphed as follows to his Government:—"The Russo-Japanese negotiations, of whose successful conclusion there was hope at one time, have of late assumed a serious complexion, the reply from the Russian Government not having satisfied Japan. War is inevitable, and it is desirable that Viceroy Yuan and Commander-in-Chief Tsen should be directed to be prepared for an emergency." The correspondent adds that in consequence of this news a Cabinet Council was to be held on the 20th instant.

Thursday, December 24.

There is news (*Jiji Shimpō*) of a strike on the part of the cargo-working coolies at Chefoo. Their cause of complaint is the equalization of wages on a low standard. Three thousand are said to have gone on strike and a thousand are reported to be in the hands of the police, but that is scarcely credible.

Owing to the war-cloud hanging over the Far East business is said to be practically suspended at Tientsin and great quantities of goods have accumulated at the port. It is particularly distressing that such a state of affairs should exist at the New Year.

The *Asahi Shimbun* publishes a telegram from Peking to the effect that the overbearing conduct of German officials in Shantung, conduct which grows more and more arbitrary in proportion as German industrial and commercial enterprises are developed, has led to the resignation of many Chinese officials, and that the Chinese Government finds it difficult to replace them. There is probably some truth in this statement. The average German has nothing very complimentary to say of his own officials at home and it is not to be supposed that in dealing with Chinese in China they are more amiable. If the exact truth could be told about foreign relations with China during the past two hundred and fifty years, what kind of picture would our vaunted civilization show?

On the 15th instant there was to have commenced before the special Mixed Court in Shanghai the trial of one Lang Chih-lue, on charges which recall the troublous times of 1900 and have exceptional interest for foreigners. The *N.-C. Daily News* gives this epitome of the circumstances culminating in the trial:—

In the summer of 1900 the whole of China was, of course, convulsed by the Boxer uprising in the north. In the Yangtze valley order was happily preserved, but a feeling of anxiety and unrest was under the circumstances, inevitable. During August Hankow was persistently placarded with announcements of a Boxer rising to take place on the 26th, and although they were consistently pulled down by the authorities, considerable alarm was occasioned. On the 28th the inhabitants of the Settlements woke up to find firing in actual progress. It was, however, the promised Boxer rising that had happened, but the disturbance occurred in connection with the arrest of a number of men who called themselves the Hankow branch of the China Independence Association. From a placard which these people had made for issue it appeared that their idea was that the trouble in China due to governmental mismanagement. They therefore desired to restore the Emperor to real power, "to agree with the allied Powers to put down the fanatical and insane movement and to bring the anti-foreign and wicked usurpers of the government to punishment." They also proposed to protect Christians and foreigners. As a preliminary to the carrying out of this programme they proposed to fire the three cities of Hankow, Wuchang, and Hanyang and possess themselves of the reins of authority. The plot was hatched in an unusual open manner, and when it was discovered, frustrated by the local officials, considerable numbers of flags, trumpets, and uniforms, a few old marching-loading firearms, two gross of policemen's whistles, and a bundle of manifestoes were discovered. The members of the Associations were, many of them, old pupils of H. E. Chang Chih-tung, and had been educated abroad at his expense. They had, however, outrun their patron and when their foolishness was discovered, twenty-eight were executed. Others escaped and it is alleged that Lung Chiao was one of these.

President Roosevelt has some queer correspondents at time. The latest is a man living in New York who declares that he has an electric battery attached to the soles of his feet, but that every time he attempted to accomplish anything some one stopped the machinery. He declares, however, that he is a double sun and also the moon, and can do anything with his great power.

DOMESTIC POLITICS.

Monday, December 21.

The non-parliamentary members of the *Seiyun-kai* have distinguished themselves by the publication of an extremely violent manifesto in which they pile obloquy on the head of the Cabinet, and call upon the nation to drive from office these obstinate, blind, unbending, venomous, unreasonable, &c., officials, and to replace them by worthy representatives of the people. What we gather from this manifesto is that its compilers are exceedingly exasperated and that their terminology of abuse is very extensive. Sometimes it strikes us that when men having ready access to that illimitable workshop of epithets, the idiographic thesaurus, apply themselves to compile a document, they really do allow their verbal resources to run away with their reason.

It is stated that the *Seiyun-kai* and the Progressists have entered into an agreement with reference to the approaching general elections. Marquis Saionji and Count Okuma have had a meeting for the purpose of discussing essentials, and the details will probably be published in a few days.

Tuesday, December 22.

It appears that ten members of the *Seiyun-kai* have left the Party since the dissolution of the House of Representatives. On the other hand, the new party under the leadership of Mr. Hayashi Yuzo will soon become an accomplished fact. Truly Japanese party politicians resemble a swarm of bees that have lost their queen.

Wednesday, December 23.

The *Seiyun-kai* and the Progressists have finally decided to avoid competition in the approaching elections and to cooperate as far as possible. The two Parties have also issued manifestoes. That of the *Seiyun-kai* is unreservedly hostile to the Ministry. The main charge preferred is that the people's right to appeal to the Throne through the constitutional vehicle of the Diet has been trampled under foot by the Cabinet Ministers who interfered to prevent the Lower House's Address from reaching His Majesty, and who advised the Emperor to dissolve the House because it attempted to exercise its legitimate prerogative. That appears to us to be the kernel of the manifesto, though there is a great deal more of a secondary character. It is also noticeable that the document approves of the sentiments expressed in the Address while condemning the procedure adopted with regard to it. Thus it would appear that the *Seiyun-kai* leaders now represent themselves as having been from the first unequivocally opposed to the line adopted by the Cabinet in foreign policy.

The manifesto of the Progressists is a long document. It reviews the whole history of foreign policy since the enforced retrocession of Liaotung, and declares that the language employed by the Mikado in declaring war against China applies exactly to the conduct of Russia, who buys delay by sacrificing promises, and who, while lulling the world into a sense of security by pacific protestations, is preparing all the while to achieve her ambitious designs by superior force. The whole progress of Japan, says the document, is arrested by the interminable delay in settling a problem which, from whatever point of view it be regarded, is one of the plainest that ever presented itself for diplomatic solution. The Progressists further draw humiliating comparisons between the rates of construction of Russian railways

in Asia and Japanese railways in Korea, and declare that Russian aggressions in Korea have been tamely endured by the Cabinet. Then they pass to the interminable questions of administrative and financial reforms, concerning which their strictures certainly seem very just, though we find them for the first time responsibly explicit. Finally, the manifesto deals with the Address to the Throne, concerning which the Progressists are virtually at one with the *Seiyun-kai*. They condemn the procedure but declare that the Address truly reflected the sentiment of the nation.

The new party under the leadership of Mr. Hayashi Yuzo has been duly organized under the ancient name of *jiyu-to*. Its manifesto pleads for the existence of political parties as a necessity under the Constitution, and then goes on to recapitulate Count Itagaki's recent argument that parties must have principles. Its own declared principles appear to be liberalism and socialism (of a kind), but for the rest we find nothing except a marshalling of ornamental phrases. There is indeed an allusion to foreign politics; an allusion which implies that while desiring peace the Party advocates employing the whole national strength for the solution of the Far-Eastern problem.

MOTONOBU'S MASTERPIECES.

The second volume of this beautiful book has been published. It reveals even more forcibly than the first volume the charms and characteristics of Motonobu's style. We long ago came to the conclusion that for combined force and delicacy of line Motonobu never had any master in Japanese art, and it may be doubted whether he would not stand in the very front rank of the world's landscape painters were not the strength of his pictures marred by a certain elements of prettiness, a necessary concession to the decorative exigencies of every Japanese painting but none the less a quality that detracts from real greatness. One thing may be confidently asserted of Motonobu's work, namely, that for beauty and accuracy of detail nothing comparable can be found in the whole range of European pictorial art—we speak, of course, within the limits of our own knowledge. It is sometimes scarcely credible that human hand could have been trained to produce such effects as he produces. An Occidental artist when he has to show an object in the back-ground of his picture—a tree, it may be, or a human being—knows only how to obtain the effect of distance by light colours and blurred outlines. But if one examines with a magnifying glass the foliage and figures in the distance of a Motonobu drawing, one finds an object limned with the utmost clearness and fidelity, its relegation to the back-ground being effected merely by omitting details which would be invisible at a distance and by depriving lines not of their accuracy but of their emphasis. Undoubtedly Motonobu has his limitations and his defects, but how these are dwarfed by his excellencies, especially when we remember that his is the work of a painter who flourished five hundred years ago, and who never assisted at the worship of the "human form divine" inaugurated by the Greeks and transmitted by tradition to all European races. The 47 pictures in this book will probably be a revelation to many people, and we do most earnestly hope that the Shimbi Kyokai will not find the enterprise of publication unprofitable. They

have done the work most admirably, the reproductions being wonderfully faithful and all the technical details beyond criticism. It is a pity that there is no English or French text, but the pictures speak for themselves.

"MANNEN-FUDE."

The above title signifies an "everlasting pen." We are tracing these words with the implement itself. Whether it is really everlasting we can not tell, of course, but it appears to be nothing more than a crow-quill with an unsplit nib, and it certainly writes capably. It came to us enclosed in the letter which we re-produce below, *verbatim et literatim*, and accompanying the letter Mr. Seki sends a specimen of the pen's capabilities—the Lord's Prayer very prettily indited. He does not tell us whether he has submitted the quill to any kind of preparatory process such as heating in a sand-bath and scraping under pressure; neither does he tell us whether the quill was plucked from the live bird in spring, though these matters are essential according to Occidental ideas. But with regard to his query about the name of the person that invented quill-pens and the date or "dynasty" as he calls it in accordance with the strict traditions of Chinese history—we must confess inability to reply. So far as we know, some fourteen centuries have passed since quills began to be used for writing purposes, and the pinion of a goose was from the first their usual provenance, though the swan, the eagle, the crow, the hawk, the owl and the turkey have also been sources of supply. Perhaps we may add that only the five outer wing-feathers of the goose serve this purpose, that of these the second and the third are the best, and that the feathers of the left wing are preferred because they curve outward and thus away from the writer using them. The feather Mr. Seki has sent us does not satisfy the last requirement. Crow quills have always been esteemed for tracing fine lines, and Mr. Seki's *mannen fude* appears to be simply an ordinary crow quill. But perhaps the Japanese crow, which is a very peculiar bird in many respects, may have feathers with special qualities. At all events at this point of our remarks we are constrained to say that the *mannen fude* is a most delightful pen, and we shall certainly continue to use it until its right to the title of *mannen* is established or disproved. In the meanwhile here is Mr. Seki's letter, which has itself some claims to attention:—

MY DEAR EDITOR,—

I am a most little Christian, and a lower pedagogue but I found that a quill has a character of "mannenfude" or work alike *mannenfude*. About this Rev. S. W. Hamblen says that follows:—

"My Dear Seki San,—I am very glad that you write me again but about feather's *mannenfude* most interest I had never heard that made a *mannenfude* from a feather, but a quill is origin of pen or steel-pen, and on Latin word (penna) is a feather of bird and so writing things called pen or pencil."

I am only pedagogue and so can not write you clearly; but, I trust you will tell me about that name of quill's invention and that dynasty and discoverer's name of "feather's *mannenfude*." If feather's *mannenfude* are not yet made in westerner, then I am this discoverer. If you like, feather's *mannenfude*, I will send you some sample of feather's *mannenfude* without price. This *mannenfude* you can write with Japanese ink or (sumi) on Japanese paper.

Most faithfully yours,

NAMIYE SEKI.

I enclosed you one *mannen* quill, please try for me, and this Japanese paper or (hanshi) very bad for *mannen* quill but other papers or Minogami, daito, gampishi, torinoko, yohinogami, and another *hanshi* all best for *mannen* quill, and you know the materials of quill crow's feather best. Amen.

Mr. Bennett knows me best.

Samurai Hama Rikuchu, Kunohe, Dec. 14th, 1903.

TOKYO NEWSPAPERS.

There is among several Tokyo newspapers a keen competition of devices for increasing their circulation, devices that have a very faint connexion with journalistic work. This began some time ago when the European manoeuvre was adopted; the manoeuvre of hiding a token in some out-of-the-way place and publishing obscure indications in the columns of a newspaper, the finder of the token to receive a handsome reward. For a time this kind of quest created quite a furore, but very soon doubts arose as to the *bona fides* of the transaction. The newspapers invariably allowed a certain fixed interval to elapse between the publication of the announcement and the time for commencing the search. But when the crucial moment came, it was generally found by those honestly awaiting it that some one had stepped down to the pool before them, and that the same one was always, if not a member of the newspaper's staff, then a person directly or indirectly connected with the staff. A change of method became inevitable. It was inaugurated by the *Chuo Shimbun*, which declared that a lottery would be held at the end of each month for the benefit of its subscribers, and that the prizes should take the form of debentures (20 yen each) of the Industries Bank. The *Niroku Shimbun* followed suit, but went the *Chuo* one better by offering a greater number of prizes and of larger value. Next into the field came the *Hochi Shimbun* with the cleverest device of all. It declared that to anyone discovering a typographical error in its advertising sheet, a prize would be given. This was really a "brainy" conception, for people do not usually peruse the advertisements in a journal with much care, and advertisers are correspondingly unwilling to spend large sums on advertising. But when it was known that the *Hochi's* advertisements would be thus keenly scrutinized, the paper at once acquired the status of a unique advertising medium. This gave an impetus to tradesmen themselves. They are now publishing announcements which promise all kinds of valuables to purchasers of more than a certain amount of their commodities, such purchasers being given tickets which entitle them to a share in monthly lotteries. Of course the whole thing is a mere whipping of the devil round the post; a flagrant violation of the laws against gambling. If lotteries are illegal, their illegality is not at all removed by any novel method of selling the tickets. The *Asahi Shimbun* thinks that all this mania had its origin in the issue of prize-bearing debentures by industrial and commercial banks.

"SELECTED RELICS OF JAPANESE ART."

We have to express our great pleasure, mingled with some surprise, that this splendid publication has reached its tenth volume, surprise because we doubted from the outset whether public appreciation was sufficiently educated to respond to such an enterprise. But since ten volumes out of sixteen have made their appearance, there is just reason to hope that the series will be carried to completion, and that the world will thus come into possession of a gallery of Japanese art worthy of the subject, and unequalled, so far as we know, in the case of any other country. This tenth volume contains 35 plates, of which six are chromoxylographs, the remainder collotypes. There are only 5 specimens of sculpture, but

this branch of the subject has been richly represented in the previous volumes. Of the remaining pictures 7 are landscapes; 14 are figure subjects; 9 are studies of birds, animals and fishes; 5 are panoramic pictures, and one shows a copper-gilt banner of the 6th or 7th century, with decorative designs of distinctly Persian affinities. We need scarcely say that all these pictures are beautiful reproductions: in other words, the very high standard of excellence originally set for themselves by the publishers is steadily maintained. Six Chinese artists figure in the list, and that is a particularly interesting feature, for we may truly say that now first through the medium of this *Shimbi Daikan* are the capacities of Chinese artists brought fully to public notice. Without attempting to speak with absolute accuracy we should say that from 50 to 60 Chinese masterpieces of the *Sung*, *Yuan* and *Ming* dynasties have been reproduced in the ten volumes of this fine book, and since nothing of the kind has ever been done, or seems likely to be done, by the Chinese themselves, there is all the more reason to be grateful to the Japanese. Indeed, it is through Japan and through Japan only that we know the grand attainments of Chinese pictorial art. Many Japanese celebrities find a place in this tenth volume—Shūbun, Sesshū, Sōami, Sōtatsu, Mitsuoki, Tsunenobu, Okyo and Goshun. Thus gradually the western public are enabled to familiarize themselves with the development of Japanese art from the earliest time, and simultaneously to trace its Chinese connexions. A remarkable fact is that among all the reproductions hitherto given in the *Shimbi Daikan* we find no Korean picture. To us, indeed, the great part assigned by some writers to Korean influence in the evolution of Japanese art has always seemed very apocryphal.

A MATCH AT BRIDGE.

An interesting match at Bridge was played in the Tokyo Club on the evening of the 19th instant between four players of Tokyo and four of Yokohama. The Tokyo players were His Excellency Mr. Griscom, the Chevalier von Lowenthal, Captain Troubridge, R.N., and Mr. H. W. Denison, and the Yokohama representatives were Mr. B. C. Howard, Mr. W. de Sivers, Mr. H. Lefebvre and Mr. G. Fulcher. The disposition was that two Yokohama players and two Tokyo sat at each table. No special hands had been arranged. Fifty packs of cards were taken, and with twenty-five of them hands were dealt just as they would be in ordinary play, each hand being preserved. Exactly corresponding hands were then sorted from the other pack, so that every hand existed in duplicate. These arrangements had of course been made by the managers before the players came together. It then having been decided by lot which pair of players among the four couples was to have the deal, the first of the 25 hands was given to the dealer and the remaining three of the pack to the other players at his table in due order. Simultaneously duplicate hands were distributed to the players at the other table, with this difference that the hands given to the Tokyo partners at the first table fell to the Yokohama partners at the second table and *vice versa*. By that arrangement Tokyo at one table always played the cards that Yokohama was manipulating at the other, and it thus became easy to keep a comparative record of the results obtained. A special method of scor-

ing had been devised so as to meet the contingency of one table failing to complete a rubber with the same number of hands as the other table, and care was also taken to deliver each deck of cards to each table simultaneously. Three rubbers were played and the result was: Yokohama 432 points and Tokyo 610. A return match will probably take place at Yokohama.

AMATEUR THEATRICALS.

The amateur theatricals given in the Public Hall on Monday evening, under the management of Sir Claude MacDonald, drew a very large audience, and, needless to say, they sent that audience home thoroughly delighted with the plays and the players. The night was bitterly cold and the Public Hall, draughty even at the best of times, seemed possessed of sieve-like qualities before the curtain rang up; but very soon after "Petticoat Perfidy" had begun people forgot the cold and the inconveniences, so quickly did Baroness d'Anethan, Mrs. Barclay and Mrs. Marsh win their wrapt attention. We have already given our opinion of the players in these particular pieces and so nothing remains but to say that the favourable verdict bestowed on them by their Tokyo audiences was more than endorsed by Yokohama theatre-goers,—especially with regard to la Baronne d'Anethan, Mrs. Barclay, Mrs. Marsh, Miss Aoki, Colonel Hume, and Mr. Horne—and hopes were expressed most fervently on every hand that not too long an interval might elapse ere they pay Yokohama another visit. Of the warmth of their reception there can be no doubt. The funds of the Union Jack Club should be materially assisted as a result of Monday's performance. We append the list of *dramatis personæ* :—

"PETTICOAT PERFIDY."

Mrs. Mountrevor Baroness d'Anethan.
Mrs. Norwood Jones Mrs. Marsh.
Juliette (Mrs. Mountrevor's French maid) Mrs. Barclay.

"A PANTOMIME REHEARSAL."

Deeds (author of the "play") Mr. Horne.
Lord Arthur Pomeroy Colonel Hume.
Capt. Tom Robinson Mr. Rosh.
Major Buxhoeveden Count Hasebe.
Lady Muriel Beauchere Miss Aoki.
Miss Lily Mrs. Barclay.
Miss Violet Miss Parrot.
Miss May Mrs. Marsh.

ORGANIZATION OF THE FAR-EASTERN VICEREGAL OFFICE.

News received in Tokyo indicates that in the Far-Eastern Viceregal Office two military bureaux have been established, that of the Amur and that of Dalny. The Dalny Bureau is to have control of all forces distributed throughout the Dalny district and New Baikal as well as Manchuria, and the other troops within the Viceroy's command will be under the Amur Bureau.

It further appears that an Imperial Ordinance has been issued for the organization of two new brigades in Siberia. They are to be designated the Seventh and the Eighth, and will consist of sharpshooters. The Seventh will be composed of the 25th, 26th, 27th and 28th Regiments of riflement; the Eighth of Regiments 29, 30, 31 and 32. The Port Arthur Regiment of garrison troops will be changed to the Twenty-fifth Regiment, the First Vladivostok Regiment to the Twenty-ninth and the Second Vladivostok Regiment to the Thirtieth.

This Ukase bears the date of the 12th of November.

THE "SPARTIATE'S" WAR TRIALS.

The following further data of the *Spartiate's* "War trial" complete what we have already published. During the manoeuvres she steamed 5,400 miles with a total consumption for all purposes including lying in harbour of 2,400 tons of coal. In the actual manoeuvres she steamed 2,950 miles, the first 1,970 of which she did in 110 hours at four-fifths power for most of the time. Coal consumption for all purposes at this speed was 1.9lb. per indicated horse-power. Steaming from Plymouth to Gibraltar she covered 1,090 knots, in tactics and cruising, burning 285 tons of coal for all purposes. The speed was 13 knots and the expenditure of coal 1 ton for 3.8 knots. Returning, Lagos to Plymouth, she covered 930 miles at 13 knots, and consumed 256 tons of coal for all purposes. This works out at 3.7 sea miles per ton. During the 10,000 mile trip to Hongkong she averaged a ton per 3.6 sea miles. The various long distance steamings at 13 knots, therefore, gave the following results:—First 10,000 miles, a ton of coal took the ship 3.6 knots; after 20,000 miles, a ton of coal took the ship 3.8 knots; after 24,000 miles, a ton of coal took the ship 3.7 knots. The total course covered was 25,000 miles, and during that time no repairs were effected to the boilers. For the manoeuvres' cruise a new crew was provided, and of a total complement of 120 stokers 70 were raw second class. This is in excess of the recognised proportion of raw hands, but the arrangement was made for experimental purposes. As soon as possible two of each of the ships fitted with Niclausse, Durr, Yarrow, and Babcock and Wilcox boilers are to be put through a similar cruise. Should any of them conspicuously fail, the type of boiler will be discarded for the British Navy. Should none of them produce results equal to those secured with the Belleville, that boiler will, it is stated, be introduced into the British Navy in conjunction with one-fifth cylindrical. A Blue-book is in course of preparation giving the results of the China cruise for the *Spartiate*, *Europa*, and all other vessels that have made the outward trip. The book will also give particulars of the "war test" trials of the *Spartiate* and her sister, with full data of the coal and water consumption. These will be more than usually interesting on account of the fact already mentioned, that whereas in the *Europa* forced draught was employed whenever possible, in the *Spartiate* it was never resorted to if it could be avoided.

MISS RIDDELL'S LEPROS HOSPITAL KUMAMOTO.

(COMMUNICATED.)

The Matinée held at the Kinki Kan Hall in aid of the above institution, on Wednesday 16th inst., was a great and pleasing success. It was entirely a Japanese undertaking and the promoters, Dr. Iwai of the Red Cross Hospital, Dr. Dohi and Dr. Okada of the Imperial University Hospital; Prof. M. Honda, of the Higher Normal School, and Mr. Kanazawa, may be congratulated. Rarely has a more aristocratic audience been seen in Tokyo and certainly never before for such a purpose. It is the first combined purely Japanese effort which has been made for helping work among the many thousands of afflicted and destitute lepers in this country. But on this first memorable occasion, there was no mistaking the kindly spirit animating all concerned. Princes, marquises, nobles of all ranks and their ladies,

the military, medical, educational and literary classes were all represented and were shown to their seats by Viscountesses, Baronesses and other lady patronesses, all intent on the success of the entertainment and satisfaction of the audience. They were animated by the same spirit of self-abnegation which in the last war with China, enabled ladies of noble birth to perform laborious and menial tasks in the Hospitals in order to save the expense of hired labour to the country. Among the foreigners present were Lady MacDonald and her party, including Mrs. Barclay, also Dr. Baetz and many others of prominence. Lady MacDonald was the only foreigner who was invited to be a Patroness, because the Leper Hospital in Kumamoto is in the care of one of her countrywomen and has been maintained by the generosity of English friends during the nine years of its existence. Lady MacDonald with her usual kindness was most energetic in disposing of tickets among foreign friends.

Kawakami and Sada Yakko (who with those who assisted them gave their services entirely gratuitously) excelled themselves in their excellent interpretation of *Shylock* the Jew and *Portia*. In the second scene, the amusing attempts of the servants to imitate their masters, even in conducting affairs of the heart, created much mirth.

In "Little Fred and his Violin," Sada Yakko sustained the part of "Little Fred," and with her enchanting violin danced away all the difficulties of life. We can but hope and have reason to believe that the financial result will be beneficial to the Hospital.

NOTES ON CURRENT EVENTS.

Information has reached us from trustworthy sources that negotiations are still continuing with the Imperial Government in regard to the effect of the decree calling upon life insurance companies to deposit their reserves. Fears are entertained that the decree without modification will so interfere with business as to cause the companies affected to seriously consider their positions in Japan. But it is gratifying to learn that the Government shows a desire to do everything that can possibly be done to meet the views of the Directors of the principal companies.

It is, of course, premature to forecast the final conclusions that may be reached, but it is probable that the important matters which have been discussed with the Department of Agriculture and Commerce will do much to strengthen the good understanding which seems to exist between the Department and the offices.

There appears to be great trouble in Mito about the affairs of the Sixty-second Bank. This institution was established in 1878, being one of the cluster of national banks then added to the nation's business mechanism. It was a comparatively small affair, having a capital of only 200,000 yen, but it seems to have gradually won local confidence. During the past few years, however, either its management has been defective or its fortune bad, for it has piled up a debt of 300,000 yen, and on the 14th instant it had to suspend payment temporarily. At first there was something like a panic, but the Mito folk ultimately took the sensible view that their only hope lay in leaving the Bank's staff to effect a settlement. However, the expectation that business might possibly be resumed on the 19th instant, has not been realized, and it is thought that

the end of the year may be the earliest date of recovery. The Bank's deposits amount to 320,000 yen and its loans to 400,000. Altogether its business is of a very paltry character and however insignificant be the fortunes of the Mito people, it is scarcely credible that the difficulties of such an institution will cause them very serious inconvenience.

The Indo-Japanese Association held its inaugural meeting in the Nobles Club, Tokyo, on the 18th instant. Viscount Nagaoka was in the chair, and among those present were Sir Claude MacDonald, Baron Kanda, Professor Takakusu, Mr. Nanjo Fumio, Mr. Shimaji Mokurai, Mr. Kawaguchi Eikai, and Mr. Yoi Tokio. Viscount Nagaoka opened the proceedings by explaining that the purpose of the Association was to promote commercial and social intercourse between India and Japan, and to assist travellers and students who come to this country from India. There was no political element whatever in the affair. Sir Claude MacDonald then spoke. He said that he considered it his duty to assist in promoting the Association because it would contribute indirectly to the friendship between Japan and England, and because India and Japan might derive much mutual benefit by cementing closer commercial and social relations. Speaking personally he took a special interest in the matter because of the part his own father and grand-father had acted in military capacities in India. Baron Kanda (speaking in English) referred to the case of an Indian student under his own care who, having been invited to deliver an address before a certain Society in Tokyo and having been wrongly reported by the press, had experienced some trouble. The Baron dwelt upon the necessity of avoiding everything that had the least colour of politics and confining the labours of the new Association strictly to trade, education and social intercourse.

The *Asahi Shimbun* estimates the yield of rice this year at a figure less favourable than that published some time ago by the Department of Agriculture and Commerce. What the Tokyo journal contends is that although climatic conditions were essentially favourable for the early rice, an excess of rain interfered with the second and third varieties, so that the final result was some 2 million *koku* less than the *Nashomusho's* figure. The details of the *Asahi's* calculation are these:—

Production in Central provinces of main island	<i>Koku</i> , 16,774,368
Production in Western provinces of main island	10,253,686
Production in Northern provinces of main island	9,447,675
Production in Kiushu provinces of main island	6,367,275
Production in Shikoku provinces of main island	2,370,192
Production in Hokkaido provinces of main island	311,366
Production in Okinawa provinces of main island	33,319
Total	45,557,581

The original estimate of the Department of Agriculture and Commerce was 47,017,211 *koku*, and the final estimate 47,713,166 *koku*, which latter figure exceeds the *Asahi's* by 2,155,285 *koku*. Thus the *Asahi* makes the crop 23 per cent. above that of last year and 13 per cent. above that of an average year, whereas the corresponding official figures were 29 and 18.

People are talking much about an error into which the Court of Cassation has allowed

ed itself to be betrayed. In 1900 Mr. Tachibana, principal of the Female High School in Shimane Prefecture, committed an act which led to his subsequent arraignment on a charge of corrupt practices. Convicted by a Court of First Instance and having the sentence confirmed by a Court of Appeal, he finally reached the Court of Cassation which quashed the previous judgments, and declared him guilty merely of a violation of the Mombusho Regulations, for which offence the Court considered that a fine of 25 yen would be sufficient. But after this judgment had been duly delivered, it was discovered that the Regulations in question had not been put into operation until the 12th of January 1901; that is to say, a date subsequent to the perpetration of the offense which the Court of Cassation had declared to be a violation of these very Regulations. Of course the judgment has been withdrawn, and Mr. Tachibana escapes scot free, barring the fact that for nearly two years he has figured as defendant in criminal prosecutions. Some Tokyo journals are disposed to make much of the Court of Cassation's blunder. Certainly it shows very culpable carelessness. Perhaps we should add that the Court of Cassation has power not only to quash a judgment or to order a new trial, but also to pronounce sentence for an offense of a different character, provided that the evidence sent up to the tribunal clearly warrants such a sentence. Mr. Tachibana, therefore, must be supposed not to have pleaded at all to the charge of having violated the 1901 Regulations.

Japanese newspapers says that Mrs. Dr. McGee, head of the Association of American Military Nurses, has applied to the Japanese Representative in Washington, offering the services of a number of female nurses for duty with the Japanese forces in the event of war with Russia. There are six hundred nurses in the Association and the work done by them during the Hispano-American war is well known. It would seem that they propose to give their services gratis, stipulating merely that their travelling expenses and maintenance should be defrayed by the Japanese Government. This offer will doubtless be highly appreciated by the Japanese nation.

The blustering and bitterly cold winds of the past few days have conveyed a certain intimation that winter's snows were beginning to bury the northern regions of the island. Accordingly the telegraph brings news that in Inawashiro, Yamagata prefecture, and Awomori snow has fallen to great depths and all traffic has been temporarily suspended.

The *Official Gazette* states that Count Alfred Wolff Metternich has joined the diplomatic staff of the Imperial German Legation.

An interesting note about the main trunk line of Formosa is published by the *Kokumin*. The terminal points of the line are Kelung in the north and Takao in the south, the distance between them being 245 miles. Work on the railway has been carried on from both ends, and of the northern section 95 miles have been finished and opened to traffic, namely, from Kelung to Sansakawa via Taipei. On the southern section 81 miles have been completed, and the remaining 5 miles included in this project will be finished before the close of the year, so that Takao and Toroku will be in railway communication. But the central section of

63 miles has not yet been touched, and so long as it remains unfinished the line may be compared to a man with half his body paralysed. This central portion presents many engineering difficulties and the funds for it have been strangely grudged by the Diet. They might, perhaps, have been granted had not the Lower House been dissolved this year, but at any rate the work can not go on. Probably the Diet will be asked to reconsider the folly of such parsimony when it meets next special session.

In view of the recent bye-elections in Great Britain the following, taken from *Public Opinion*, should prove interesting:—Mr. Chamberlain's ascendancy in the political world is one of the most remarkable phenomena ever witnessed by the British people. Five out of six of the articles in the monthly reviews which deal with Imperial questions accept Mr. Chamberlain as the embodiment of all that is virile, assertive, resourceful, and far-sighted in the British race to-day. There has been none like him since Chatham, says "Calchas," in the *Fortnightly Review*, and "he is the only statesman capable of marshalling national and Colonial opinion together in support of one cause." Strenuous opponents of preferential tariffs admit the force of Mr. Chamberlain's personality; in places of public amusement no entertainer is allowed to make fun of him without sharp protest; journals which lend a ready support to his views are, we happen to know, increasing rapidly in circulation; and neither the trade nor the public will tolerate a cartoon which suggests that Mr. Chamberlain may be anything but a hero. The publisher of the "Joseph Jingle Book," for instance, has withdrawn the cartoon by the redoubtable Max Beerbohm, because it was regarded as offensive by the powers that sell and the public that buys. Caesar never enjoyed such a triumph as that.

Heavy falls of snow are reported from the southern provinces as well as from the northern. The centre of the main island is also involved.

Some interesting facts are to be found in the budget for the colonies recently submitted to the French Chamber by M. Dubiel. He enumerates the important colonial acquisitions of the republic from the occupation of Tunis to the present day. These include Tonkin, Madagascar, and the extension of French power in Africa and Indo-China. The French possessions now cover an area of 9,000,000 square kilometers, eighteen times as extensive as the mother country, with a native population of more than 30,000,000. Some statistics furnished by M. Dubiel show that the total expenditure of the mother country on fourteen colonies and groups of colonies is, in round numbers, 86,000,000 francs. Thus the expenditure upon the colonies is equal to about 34½ per cent. of the amount of their purchases of French products. Among the more important colonies this high proportion of the expenditure, in comparison to the imports, rises to about 82 per cent. in the case of the French Congo, 71 per cent. in that of Madagascar and Guiana, 67 per cent. in New Caledonia, 32 per cent. in French West Africa, and 20 per cent. in Indo-China. Following the precedent established since 1901, the budget committee again reduced the subventions granted to different colonies. Indo-China and West Africa are represented as being in a flourishing financial condition,

while the situation of Madagascar is admitted to be less satisfactory.

To the *New York Evening Post*, Colonel Robert M. Thompson, who was a guest of Lord Charles Beresford during the manoeuvres in the Atlantic this year, contributes some interesting remarks on his impressions "The British Navy," he says, "is in a splendid state of efficiency. The target practice is excellent, the drill is excellent. The *esprit de corps* is as near perfect as anything can be. . . . No combination of navies, for example, could by any endeavour make so effective a single fleet. There would be a lot of disjointed units. Their coaling stations and cables all the world over give the British a great advantage. Their fleets would be able to keep at sea longer than those of any other Power. I believe England could bottle up the Red Sea by her fortifications at Aden, so that no enemy could slip through unless by stealth, or perhaps by getting a start before hostilities opened, or by some subterfuge. The Indian Empire is her vulnerable point, but this weakness is set off by her strength at the approaches of the Suez Canal, the great artery of the world's commerce. It would be no small penalty to compel hostile ships to go round by the Cape, and this is what she would be able to do." Col. Thompson goes on to say that it must not be forgotten that to put a fleet into a state of preparedness for war is the work of a lifetime. It cannot be put into action in a hurry. Marksmen, machinists, and seamen, all require long years of training before they are truly efficient, while the education of a naval officer is lifelong. Lord Charles Beresford, he says, is a striking example of this. The Vice-admiral standing on his bridge seemed to know intuitively what would happen long before ordinary eyes had begun to take in the preliminaries, and to his experienced eye it was soon apparent when any ship was losing her station, and an order was despatched for her to make another revolution. This is the sort of perception which only years of study can give, and this is just the sort of perception which goes to win battles. No greater mistake could be made, he thinks, than to suppose that the United States or any other Power can extemporise a fleet for an emergency use. Referring to what he actually saw himself, Col. Thompson says:—"When the three fleets participating in the manoeuvres were combined, there were seventy-two battleships and cruisers, with nearly 40,000 men, all under the command of one Admiral—probably the strongest fleet ever brought together in the history of the world. This enormous assemblage of vessels was handled without a single break; when the entire seventy-two ran to anchor in eight lines, had there been a straight-edge placed in front of them it would not have shown a ship, it seems to me, a foot out of position. They made a flying moor, and when you consider that in point of time, at the speed the ships were going, they were only one minute apart, every seaman will appreciate how wonderfully they must have been handled."

What is the logic of the bitter appetizers that are commonly taken just before the heavy meals of the day both in this country and abroad? The object is apparently to stimulate the secretion of gastric juice, but it has been suggested, we are told by a writer in *The Lancet*, that it would be more physiological to make use of a small quantity of alkali instead, as that is known to

exercise a favourable influence upon peptic secretion. He goes on to say:—

"The chief objections to the use of bitters have been based on researches by Tchelow, who found that administration of large doses of quassia hindered rather than helped the digestive process. Reichmann, moreover, showed that in the fasting stomach, the secretory activity of which is normal or diminished, a bitter drink produced less secretion of gastric juice than a draft of distilled water. These experiments take account solely of the specific action of the bitters and do not regard their reflex effect. These have been particularly studied by Borissov, whose results are analyzed in a recent number of *La Semaine Médicale*. Borissov found that if a little wad of wool soaked in tincture of gentian was put into the mouth (of a dog) immediately before food was administered a marked stimulant effect upon gastric secretion resulted; but if the bitter was used fifteen to thirty minutes before the meal it was quite inefficacious. It is concluded, therefore, that these substances have the power of rendering gustatory sensations more acute and of exercising a temporarily stimulant effect upon gastric secretion; for this purpose they should be given immediately before the meal in small doses and in the form of tincture (10 to 20 drops) rather than cachets or pills. We may remark upon this that the habit is obviously susceptible of abuse, particularly when, as is usually the case, some strong alcoholic liquor is used as the vehicle of the bitter. As a matter of fact, such a stimulant action is the real function which is intended to be subserved by the soup which is taken at the beginning of a meal. There is a tendency . . . to consume this in somewhat large quantity; in such cases it tends to be harmful rather than conducive to digestion; but there can be no doubt, on the other hand, that the use of a tablespoonful or two of a hot and sapid fluid at the beginning of a meal is an excellent means of giving the stomach a fair start in the performance of its functions."

It need scarcely be said that there is not the smallest truth in the news telegraphed by Reuter that the Japanese Government, or its agents, have been endeavouring to float a loan in New York. The financial situation of Japan is most favourable at present, and in the event of emergency she would not be in any way inconvenienced for funds. The Bank of Japan has a specie reserve of 113 million yen; it has some forty millions lying in London; it has a 35-millions legal margin of note-issuing power; the Treasury has the Three Capital Funds, aggregating 50 millions of yen, and has, besides, some 20 millions in London, remaining from the last sale of bonds. Finally, the banks throughout the empire have large stores of idle cash.

INTERPORT RUGBY.

The Rugby captain has fully a score of players to draw upon to make up his fifteen and, the time fixed being the New Year, one may presume there will be no difficulty in any of the chosen getting away. Among the probable forwards W. S. Moss, Kingdon, Bowden, Stuart and Ward are all known hard workers, and one or two of the more "hefty" ones might take a leaf out of the book of the last named. Strome played a good solid forward game in one Navy match, and he can do it always if he tries, as can Wadilove and the two Whites. It is pitiable to see big powerful forwards doing the "passenger" act. Pollard is a hard working forward but is troubled with a leg and Stuart is also obliged to take care. There is a spare forward in Mason, but he has hardly proved himself yet at this game.

The two halves are almost certain to be J. E. Moss and Hayward, the former being at his best in the enemy's territory and the latter excellent in defence. It is not too much to say that Hayward is twice as good as he was last year. The feeding of the three quarters by these halves has of late not been what it should be, but in many cases it has been the fault of the three quarters themselves. In attacking they must get closer to their halves (Cartwright is inclined to over-do it) as a half naturally hesitates to pass the ball about twenty yards back. If E. W. Kilby, for instance, were to stand closer when attacking I feel sure he would

score more often than he does. It may be that he wants to make fairly sure of fielding the ball, but if he should knock on from a pass fifteen or twenty yards behind the half or three quarter who makes the pass, where he does it is where the scrummage is formed, and it all results in loss of ground. Wheeler's play is too well known, and one can only say that he should get more chances than he does. I wonder how his percentage of tries would work out considering the number of times he has had the ball this season. Wheeler's great point is full steam ahead the moment he gets the ball, and should there be a dribbling rush or a run by a forward he is always handy, as witness the *Glory* match. Personally I think if the most is to be made of Wheeler he should play inside instead of on the wing; he himself, however, is the best judge, but, looking at the combined play behind the scrum in all the games played this season, I feel I am right—nay, more—I shall go further and say that, although he has not spoken to me on the subject, I feel sure the above is what Wheeler himself thinks.

In Cartwright we have a veritable grafter, too keen at times, and could, if he would avoid holding the ball too long, make his hard work even more valuable to his side than at present. A keen footballer, he labours under the disadvantage of not being naturally cut out for a three quarter, and a short, waist-high, clean hard pass is a *magnum opus* to him. Be that as it may, he is a worker from the kick-off and whether resident in Kobe or Yokohama no team would be representative without him. This is Foster's first season here and I confess that I cannot make him out. For a man who, it is plain, knows the game, it is not unkind to say that he does not make the most of his opportunities. Why is it? He seems to get the ball more often than other three-quarter, and after running a few yards seems to slacken up and show a fervid anxiety to get rid of it. More dash and more confidence are all that are wanted. In J. L. Graham we have a youngster whose knowledge of the game and his ability to expound it have expanded in a surprising manner. Practice, no doubt, has done it, and Graham is now a fearless young player. He is dodgy in running, keeps his place, and is improving in speed every week. Cox is short of work, as the trainers say, and, good man as he is, unless there is a difficulty with the halves or full back I cannot see where there is room for him.

For the position of full back we seem to have one candidate only, and this is generally the difficulty with clubs everywhere. However, if Van Smith be the captain's chosen, I am sure he will acquit himself well. Now that he does not make those runs straight up the field but, on the other hand, kicks judiciously, he can be trusted; he is a little inclined to get too far up the field when the ball is well within the opponent's twenty-five. If the ball is passed out he will not get the drop at goal or the chance of a run-in—the three quarters will have all those chances and all the glory should anything eventuate, but the full back runs the risk of a kick from the defending side over his head and then he has, or should have, the opposing forwards down on him before he can recover, and even though he may recover, ground is sure to be lost.

So much for individuals, now for some points about our play. First, it is a most astonishing thing that neither our Rugby nor our Association teams can jump away (so to speak) at full speed. It is true that in this connection the Soccer players are the worse offenders, and in support of what I say I should like to mention a conversation which I heard between two members on the day when the Club played the *Lawhill*. Both members, I may say, are natives of the European continent. The conversation ran thus:—

A. (just arriving) "Well, Z, you are always in time to see the start of a football game, but I don't expect the sailors will have a chance."

Z. (who is a regular spectator) "I don't think they will, but I will bet you (here he named a modest kind of refreshment) that the sailors put the ball over their opponents' goal line first, because that is the rule when Yokohama plays against outside teams."

I thought nothing more of this conversation for a quarter of an hour but it soon came back to me when during the first few minutes play the sailors had actually scored three "stars" as the navy men call behinds. That evening I thought a little more about that conversation and could not but acknowledge that my Continental friend was a keen observer. Witness the recent Association match against the *Abion*, to say nothing of certain two interports against Kobe (one lost and the other a draw), both of which would have been wins had there been more dash from the start. Either this failing is due to laziness, to conceit, or both (a sort of "it will be all right in the second half" idea), or it is due to their inability to work at high pressure from the kick-off. The fact is there, glaringly apparent, and players themselves must know to which reason it is due.

It is pleasant to know that there is regular practice daily and I think there is no fear but that Yokohama will give a good account of themselves. But there is one more thing I should like to say and that is "play to the whistle." Probably owing to the fact that a great number of the players were either novices or making their first local appearance more points came up for adjustment on Saturday than is ordinarily the case, but one thing was a source of great surprise to those on the touch-line and that was the cheerful way in which a man who intercepted a wild pass (even though a little forward) or caught a knock-on gave up the ball to scrummage. The painful part was that in every case (there were at least four) it was a more or less experienced player who did it. If you take a knock-on or throw forward from an opponent and stand like a dummy the referee is sure to blow the whistle seeing that you do not take advantage of what is allowed for under Rule 16 and so the ball must be put down. The referee will not, or should not, blow the whistle if you get a move on at once. He will always give you at least a second which is ample time for you to decide what to do. Similarly a fair catch can be made from a knock-on even though the whistle has been blown and the player awarded a free kick (Rule 9). Yet in two instances last Saturday players ignored this privilege and in one case it was odds on a goal being kicked from where the occurrence took place. But no; in both cases the player quietly surrendered the ball to the opposing half (of all people!) and meekly stood by while his forwards packed up. Result—a loss of ground which could certainly have been made and all through want of knowledge or rather want of ready thought. The interruption of a bad pass or knock-on is one of the first things a live Rugby footballer should learn, and it is this liability to interruption which makes the long sky-soaring pass not only useless to one of the same side, but invariably makes it of invaluable aid to the other side.

POSTER.

The team that is to represent Kobe in the Interport Match between Kobe and Yokohama, to be played at Kobe on Saturday, January 2, has now been chosen, says the *Herald*. It is as follows:—

C. Atkinson, Full Back; R. G. Crane, P. L. Spence, E. C. Jeffrey, A. H. Gillingham, Three Quarters; E. H. Moss, C. J. Lucas, Half Backs; J. G. Murray, H. F. Scudamore, Dr. Kilpatrick, C. L. Spence, A. J. Cornes, H. Rankin, G. Alcock, H. A. Stewart, Forwards; G. Stephens, Reserve.

A fair amount of courage was required on Saturday afternoon to face the bitter cold blasts that swept the cricket ground and therefore few spectators turned out to watch the Rugby football match between Born in Japan and the World. The play was less one-sided than the score would lead one to suppose, the Born in Japan having the luck to secure all their points (13) in the first half, to their opponents' 3. On change of ends the balance veered from side to side but neither managed to score anything and the game ended in favour of the Born in Japan by two goals and a try to a try. If anything the victors were the heavier team. Players:—

"BORN IN JAPAN."

Back: K. van R. Smith.

3/4 Backs: E. W. Kilby, J. D. Graham, J. Drum-

mond, H. Goddard.

¼ Backs: J. E. Moss, H. W. Kilby.
Forwards: W. S. Moss (Captain), W. J. White, O. Strome, A. Kingdon, W. B. Mason, H. Y. Irwine, A. W. S. Austen, W. Graham.

"THE WORLD."

Back: W. Goddard.
¼ Back: B. C. Foster, J. S. Cartwright, A. E. Pearson, G. N. Fairhurst.
¼ Backs: P. A. Cox, H. E. Hayward.
Forwards: F. O. Stuart (Captain), F. W. R. Ward, W. B. White, C. A. S. Palmer, W. J. Waddilove, R. C. Bowden, W. M. Squire, A. Hills.

I learn that the following team has been selected to play for the Y.C. & A.C. against Kobe on the 2nd January.

Back.—K. van R. Smith.
¼ Backs.—S. Wheeler, J. Cartwright, J. L. Graham, E. W. Kilby.

¼ Backs.—H. E. Hayward, J. E. Moss.
Forwards.—W. S. Moss (Captain), F. O. Stuart, F. W. R. Ward, A. Kingdon, W. J. White, R. C. Bowden, O. Strome, W. B. White.

It is not quite Yokohama's full strength, but for a team which has to travel down to Kobe it must be considered very representative.

The forwards are a heavy lot, and but for the loss of F. Pollard, who has hurt his leg, are the best Yokohama can put in the field. Forward tackling is strong, and with one or two exceptions all are hard workers. I should like to see more dribbling and men backing each other up better and less wild passing. At half, Yokohama has its weakest point. Both J. E. Moss and Hayward are good at defensive play and work tremendously hard, but in attack they are far too slow and seem unable to get the ball out to their three-quarters as often as they should. I hope they will remember they are on the field to feed their three-quarters and not imagine that by selfish play the game can be won. The three-quarters are far stronger this year than last. Wheeler is back in his old place again, Cartwright is playing his sound game of last year and Kilby has improved a lot. J. L. Graham, the new comer, has made some pretty runs during the last practice matches and deserves his place. Three-quarters must not hang on to the ball too much—remember to pass before you are tackled and get the ball moving across the field as swiftly as possible. Above all run straight and don't circle round like swallows. Remember too to kick at times—it will rest your forwards. Van Smith is the full back. He has kicked well and clean during the season, but I should like to feel confident that he can always grass his man.

P. A. Cox would have been a welcome man at half, but I hear he cannot get away from Yokohama, and Goddard, too, I should have liked to see playing again at back but he seems to have forsaken the football field. Foster will go down as reserve man—if he had played as well as when he first turned out for Yokohama he would I believe have been in the team, but he has lost his dash and nerve.

I shall feel confident that Yokohama will bring back the Rugby shield with them if only they will play hard from the start. Heavy men like Strome and W. B. White must play harder and go into the scrum—hanging on the outside interferes with the halves and the loss of two men in the scrum is disastrous. If everyone works, it will be a well-balanced team—heavy forward, and fast behind—and there is no doubt that strong as Kobe is supposed to be, they must be a good lot to beat our men.

Several supporters are going down to Kobe to see the game. Most of the team travel down by the *Hakui Maru* leaving on the 31st; the remainder go down by train on the Friday night.

I end by wishing W. S. Moss, Yokohama's Captain, good luck, and I shall be a disappointed man if he and his team do not come back victors.

GENRO.

At a Durbar in the historic capital of the Upper Burma kings, Sir Hugh Barnes delivered a speech to 3,000 monks and many Burmese and Chinese notables, in which he explained and justified the policy of the Government in recognising the High Priest of Burmese Buddhism.

YOKOHAMA LITERARY SOCIETY.

The usual fortnightly meeting of the Yokohama Literary Society was held on Friday evening at the Van Schaick Hall, when Dr. N. Gordon Munro delivered a decidedly interesting lecture on the antique coins of Japan. The speaker has devoted many years to the subject of Japanese numismatics and we may shortly expect a learned volume from his pen dealing with this fascinating subject. His lecture last evening was illustrated by lantern slides, and in addition Dr. Munro exhibited many specimens of ancient coins and tokens which have been brought to light in recent years by delvers among old dolmens and burial mounds. Elsewhere we print the lecture and only regret that we are not able to supply the illustrations of the coins as well. Dr. Munro was warmly thanked at the close of his remarks, the motion being proposed by the President. The second part of the programme was as follows:—

1. Piano Solo..... "Prelude"Chopin.
Mr. B. R. Berrick.
2. Violin Solo..... "Romance"Jensen.
Miss Helena Page.
3. Song..... "L'Anneau d'Argent"Chaminade.
Mrs. R. Schmid.
4. Trio....(a) "Elegie"Massenet.
(b) "Min Klinge Mein Leid"Gottmann.
Mr. H. A. Poole, Mr. Rud Schmid and Miss Poole.

The next meeting will be held at the Public Hall on Wednesday, December 30th at 8.30 p.m., when a capital concert programme will be given. The music will include three songs by a local composer, of whose high merit and delightful charm we hear glowing accounts. The President announced that for this "Christmas and New Year's Meeting," as it is called, each member would be allowed to bring one guest without first applying to the Secretary as is usual at ordinary meetings.

YOKOHAMA MODERN SCHOOL.

The Yokohama Modern School broke up for the Christmas Holidays on the 17th inst., after what may justly be described as a successful term. It will be remembered that the school opened at the beginning of this year, on lines admitting the sons of Europeans and Americans only, and that in June last the Principal, Mr. Bruce Mitford, declined the offer of an educational appointment under the Government of Hongkong, in response to numerous promises of local support. These have since been fully realized, some twenty-three pupils having entered in the course of the Autumn Term, a proportion of them being boarding students. A qualified assistant, we understand, will shortly arrive from England.

In the recent Terminal Examinations, ranging over a considerable number of subjects, S. Vincent comes out top and W. Worden second. The results of the term's work and the examination combined are as follows.

ENGLISH AND FORM SUBJECTS.

Form IV. A. 1. W. Worden, 2. S. Vincent, 3. W. Gray.

Form IV. B. 1. T. Betts, 2. V. Worden, 3. E. Esdale.

FRENCH.

Form IV. A. 1. A. Bishop, 2. F. Stone, 3. A. Bailey.
Form IV. B. 1. J. Esdale, 2. E. Esdale, 3. B. Cahusac.

LATIN.

Form IV. A. 1. W. Worden, 2. S. Frank, 3. F. Vincent.

Form IV. B. 1. E. Esdale, 2. J. Esdale, 3. F. Dinsdale.

MATHEMATICS.

Upper Division 1. W. Worden, 2. F. Stone, 3. S. Frank.

Lower Division 1. A. Bailey, 2. S. Vincent, 3. W. Gray.

In the Preparatory form W. Wilson heads the list. S. Frank and J. Mollison are equal and first in Drawing, W. Gray has the first place in Shorthand.

A glance at the School Magazine, the *Modernian*, shows that sport and outdoor enjoyment receive their due need of attention. In short, the Modern School seems in a fair way to realize its ideal: the maintaining of the best traditions of the English Secondary Public School.

ASIATIC SOCIETY OF JAPAN.

By kind invitation of His Excellency Sir Claude MacDonald, the Annual General Meeting of the Asiatic Society was held at the British Legation, Tokyo, on Monday, December 14th, at 4 p.m.

The minutes of the previous meeting were taken as read.

By unanimous vote, Article XV. of the Constitution was amended, as previously proposed, to read: "All Members of the Society shall be elected by the Council. They shall be proposed at one Meeting of the Council and balloted for at the next, one black ball in five to exclude; but the Council may, if they deem it advisable, propose and elect a member at one and the same Meeting; provided, that the name of the Candidate has been notified to the Members of the Council at least two weeks beforehand. Their election shall be announced at the General Meeting following."

The Secretary read the list of Members elected during the year; also the following

REPORT OF THE COUNCIL—SESSION 1903.

The Council of the Asiatic Society has to report for the year ending to-day the following matters of interest.

During the year, nine Council Meetings, two General Meetings and one Special General Meeting have been held. At a General Meeting on November 4th, Dr. Baetz read a report on his visit to Tonkin as a Delegate of the Society to the Congress of Orientalists held in connection with the Hanoi Exposition. At the meeting to-day, Professor A. Lloyd lectures on "A Chapter in Indian History." At a Special General Meeting in Yokohama, November 25th, Mr. Ekai Kawaguchi lectured on his "Visit to Lhasa."

Mr. Lay's paper, "History of the rise of political parties in Japan," read at the last annual General Meeting, has been published as Part III. of Volume XXX. of the Transactions. No new papers for publication have been accepted within the year. Such "lean" years are perhaps inevitable for a Society which depends wholly on voluntary contributions. The Council keenly regrets this, and is therefore specially glad to report at least four papers as being already in prospect for next year.

In other directions, the Council can report encouraging progress. Accessions to membership of the Society have been eighteen—seventeen newly elected members and one renewal. Losses have been three—two deaths and one resignation.

As indicated by the number of meetings, the Council has actively worked to promote the interests of the Society. It has ordered the publication for information of members and others of a pamphlet containing the Constitution as revised to date, and a complete list of all publications of the Society. It has had prepared an index of one number of the Transactions, with a view to ascertain the cost and the feasibility of preparing a complete index for all the Transactions. It has with the aid of special committees revised all in some cases slightly modified the prices of Transactions, taken steps to infuse greater interest in the election of Officers and Members of Council, and fixed terms on which Learned Societies and Libraries (not private) may obtain publications of the Society on regular subscription. Finally, it has under its supervision a Committee engaged in the extensive work of arranging works in the Library with a view to render them more easily accessible and thus vastly to increase the utility of the Library. This is merely a brief record of things done.

The Report of the Treasurer was presented as follows:—

TREASURER'S REPORT, ASIATIC SOCIETY OF JAPAN, DECEMBER 14, 1903.

RECEIPTS.

By Balance in bank Dec. 16, 1902.....	3,513.82
" Membership fees	406.33
" Sale of Transactions	580.75
" Interest and Miscellaneous	61.87
	<u>3,562.77</u>

EXPENDITURES.

To Librarian, for printing of Transactions, assistant, postage, &c.....	401.34
" Insurance	100.00
" Rent (2 years)	200.00
" Postage	21.07
" Balance in Bank, Dec. 14, 1903.....	2,834.36
	<u>3,556.77</u>

R. S. MILLER,
Hon. Treas.

The Librarian said that he was unable to make a formal report. A year ago he had stated that the space of the Library was so over-crowded that

not only were the works in the library more or less inaccessible, but also there was absolute lack of accommodation for publications actually being received. The matter was brought to a head by the arrival during the Summer of four large cases of books from the Smithsonian Institution. Council appointed a Committee to investigate the condition of the Library and to remove to some school library such publications as were hardly likely to be used in the Library of the Society. That Committee began to hold sessions in October, and is still in the midst of its labours. The result is such a confusion in the state of the Library that a report at present is impossible.

The election of Officers and Members of Council for the ensuing year resulted as follows:—

President, Professor A. Lloyd; Vice Presidents, for Tokyo, Dr. D. MacDonald; for Yokohama, H. B. M. Consul-General, Mr. J. C. Hall; Corresponding Secretary, Professor E. H. Vickers; Recording Secretary for Tokyo, Professor E. H. Vickers, for Yokohama, Dr. J. L. Dearing; Treasurer, R. S. Miller, Esq.; Librarian, Professor J. T. Swift; Members of Council, B. H. Chamberlain, Esq., Professor C. S. Griffin, J. McD. Gardiner, Esq., J. H. Gubbins, Esq., Rev. D. C. Greene, D.D., Rev. A. F. King, R. J. Kirby, Esq., Rev. Walter Weston, Professor E. W. Cleinert, Rev. H. H. Guy.

Professor A. Lloyd, having been introduced by the Chairman, Rev. D. C. Greene, D.D., read his lecture on

A CHAPTER IN INDIAN HISTORY.

There are two points that I wish to make by way of preface to this paper. In the first place, it is, I fear, on a subject which however attractive it may be to me personally, cannot be made amusing or interesting even to the majority of my hearers or readers.

In the second place, I fear, that in addition to being neither amusing nor interesting, it will have to bear the reproach of not even being instructive. To be instructive there must be at least a certainty about the thing taught; but when we come to the History of India all is uncertainty, confusion and guess-work. We cannot tread with the firm step of the historian who is confident of his ground: all that we can do is to grope and feel and make a cautious step here and there. The only thing then that I can say about my paper is that it is tentative, and possibly suggestive; and with these few words of introduction I will plunge into my subject.

Our earliest knowledge of India—the India of the Vedas, a thousand or more years before Christ—shows us the country then as now under the rule and dominion of a white race of conquerors. The white conquerors of antiquity spoke of themselves as the Aryans—the brave race, possibly, or the men of culture—and invading India from the N. W., across the Indus and through the Punjab, settled themselves in the plain along the upper reaches of the Ganges and Jumna, naming this district the *Arya varsha*, or home of the cultured.

This district came under their own direct rule, but their power and influence reached out far beyond the lands which they had formally annexed to themselves. As far as the mouths of the Ganges, as far as the Vindhya Hills and beyond them, from the Himalayas to Cape Comorin they extended their influence and their presence, and being a race of energy and power they gradually acquired for themselves everything that was worth having in the lands which they had chosen for their adopted home. They were the priests, and the warriors, the merchants and the farmers, and from these professions which they thus monopolized they took the names of their highest classes or castes—the Brahmins were priests, lawyers, and scholars, the Kshatriyas, were warriors, and the Vaisyas were farmers and merchants.

These three classes—the aristocracy of ancient India—were a close corporation, held together by pride of birth and station. They were *divya*, "twice born," "the regenerate"—and the term had a social as well as a religious meaning with them—and they had nothing but contempt for what was outside of their pale.

What was outside of these three holy castes was marked off by a colour line as sharply drawn as that which is now drawn in the United States. The Sudras, and the Pariahs—the former, the dark-skinned aborigines living in Aryan states as helots, serfs, or bondmen, and the latter, the aboriginal hill-tribes altogether outside the pale of Aryan civilization,—none of these were "twice-born," none of them possessed the *Arya varsha*, or Aryan colour. They were on the other side of the colour line, and between them and their light-skinned conquerors no social intercourse was possible. They tolerated each other, and that was all.

A good deal of the history of India may be summed up as a record of continual upheavals of the

downtrodden aboriginal races against the Aryan predominance, and especially against the high-handed tyranny of the Brahman caste.

In these upheavals they gained unexpected allies from the ranks of their oppressors. The Brahmins, who were priests, lawyers, and scholars, often exhibited in their dealings with their fellow Aryans of other castes, a combination of intolerance, cunning, and pedantry which the others bore with a very ill-grace. Or it often happened that a Kshatriya or Vaisya, living away from his own people on his estate or farm where he had none but aborigines to associate with, gradually came to be drawn closer to his neighbours and associates, and to lose touch with his own people whom he saw but seldom. In these and in other ways there grew up a discontented party amongst the Aryans themselves, and thus there was formed between the two races an intervening class, formed from both, whom I should compare, if it were not obviously an invidious thing to do so, with the "poor white trash" of the South. In the hands of these men the opposition to Brahman despotism took a more enlightened as well as a more spiritualized form. Several of the great schools of Hindoo philosophy are esteemed heretical by the Brahmins: they were established by discontented Aryans seeking some logical ground for their opposition to Brahmanism. Several forms of religion showed themselves in opposition to the religious system which had grown out of the worship of Vedic times. The most noted of these—Jainism and Buddhism—were the Kshatriyas, men of the warrior caste, in revolt against the ceremonialism of the Brahmins.

Buddha died in B.C. 481 (that is at least the commonly accepted date). His long life had been spent in the inculcation of a simple and yet exalted system of religious morality which was well calculated to unite together into one the complex network of races that live together in the peninsula of India. Buddha knew nothing about a privileged race of twice born people, nothing about the colour line that separated Aryan and Pariah. His salvation was free for all men, and his community of monks made no distinction between clean and unclean. He tried to weld India into one body: and if we remember that during the years of Sikyammuni's ministry the Persian King Darius Hystaspis established himself in the Punjab, we shall not perhaps be astonished at the success which attended his efforts. India perhaps felt that she needed a united front to present to the new invader.

Buddha died in B.C. 481, and within a few weeks of his death, his followers, meeting in Council in the cave at Rajagriha, recited in an oral form the whole of his teachings on doctrine, morals, and discipline. That they could recite it orally speaks volumes for the simplicity of the original deposit of Buddhist teaching.

Just one hundred years later it was necessary to hold a second council, and the subject discussed was the Ten Indulgences. The early Buddhist morality had been a hard and severe one. It was admirably suited for a band of religious fanatics going forth in the first burst of missionary enthusiasm. When the number of adherents became a large one, and when for other reasons it became necessary or at least advisable to attract to the Buddhist cause as large a number of adherents as possible and to let Buddhism loom as large as possible in the eyes of the world, it was very natural that a demand should arise for a relaxation of the original rule. This, I think, will be found to give a satisfactory reason for the Ten Indulgences which the Second Buddhist Council sanctioned.

The Brahmins were at this time weak and divided; the Buddhists strong and buoyant with hope. They were evidently straining every nerve to become the dominant state religion of India, and it was not long before they got their chance.

In B.C. 334, not fifty years after the Council which had granted the Ten Indulgences, Alexander the Great started out on his career of conquest, and eight years later, B.C. 326, crossed the Indus, defeated the Indian King Porus at the Hydaspes, and threatened the whole of India with his power. Porus was a Brahman, and in his person Brahmanism had showed herself powerless to defend India from invasion. It is true that Alexander died soon after, but Hellenism had come to stay and India needed a Saviour. The Saviour was found amongst the dark-skinned aborigines and the hour of Buddhist prosperity had come.

In the middle reaches of the Ganges, on the confines of what is now the province of Bengal, with its capital near the city now known as Patna, was the Kingdom of Magadha, a country which for centuries had been ruled over by a dynasty of Aryans with liberal tendencies who had from the earliest times been very favourably disposed towards Buddhism. Magadha was, in fact, the headquarters of Indian Buddhism, and if we take a map of India and compare the position of Patna with that of Lucknow, which in later years became the capital of the Mogul

Emperors, we shall see that it was not so badly placed for becoming the seat of Empire for the whole of India.

In the year 320, three years after the death of Alexander, a successful insurrection placed on the throne of Magadha an adventurer of the Sudra caste, Chandragupta* by name, who established a dynasty that lasted for many generations. He was not a Buddhist but he was certainly not a Brahmanist, for he did what no Brahmanist would have done—he married the daughter of Seleucus Nicator, the general who succeeded to the Asiatic dominions of Alexander, and he by his consummate state-craft saved India from a conquest by the Greeks.

Chandragupta, (who has been supposed to have been by religion a Jain) died B.C. 291. His son may be passed over: his grandson, the celebrated Asoka, came to the throne B.C. 263. Asoka was a man of strong religious feelings, he has been called the Constantine of Buddhism, he might perhaps equally well be called its Kaiser Wilhelm, for he had all that monarch's fondness for preaching sermons to his subjects, and he preached them on stone so that they might never be forgotten. Originally like his grandfather, a Jain, he was converted to Buddhism some years after his accession, and distinguished himself by the fervour of his zeal in the propagation of his new faith.

A third Council was held: doctrines revised, discipline restored, and what was more, a great band of missionaries sent out towards all the four quarters of the compass to preach the faith to which the Great Asoka had given his adherence, and, it may be, extolled the power and justice of the great monarch who, in early days, had styled himself Piya-dasi, "The friend of the gods" and who had now become the patron and friend of the Buddhists.

Within a few years after the close of the Council, the Buddhist emissaries had pushed out from Magadha to Kashmir and Sind in the West, to Ceylon in the South, to the Malay Peninsula, Java, and Siam in the South and East. What they took with them we know from the conditions of Buddhism in Ceylon, the country in which Buddhism has found a more congenial soil than anywhere else in the world. It was no longer that simple and condensed form of words which the early disciples had been able to recite without books in the cave of Rajagriha, neither did it consist of tremendously long dissertations such as the Dai Hannya Kyo (Maha Prajna Paramita Sutra) known to Buddhists in Japan. The sacred books of Buddhism, written in Pali, and revered in Ceylon, are those known as the scriptures of the Lesser Vehicle, and form as it were a mean between the brief simplicity of the original deposit and the lengthy prolixity of some of the Mahayana Scriptures. They are far more philosophical and less theological or doctrinal, and perhaps not so lofty in their aim.

Asoka died in B.C. 235. His principal work was undoubtedly to promote the spiritual and ethical welfare of his subjects, but mixed with his religious work there seems to have been more or less of a lower ambition—the desire to be the ruler of a mighty Empire and to unite the peoples of India as far as may be under one sceptre. These dreams, however, were destined only to have a transient fulfilment. His heirs were not the inheritors of Asoka's genius: the dynasty which he had founded passed away, and not many years after his death, Northern India passed under a foreign yoke. From B.C. 181 to B.C. 151 mixed hordes of Greeks and Bactrians re-established the conquests of Alexander and Seleucus and Graeco-Bactrian influence established itself in the peninsula. It is in this period that is placed the life and activity of Nagasena, the forerunner of the Mahayana School of Buddhism known, to us through a book in which he is represented as discussing religious problems with Menander, one of the latest of these Graeco-Bactrian Kings. The book itself is probably of a later date, but the very fact of its existence points to the existence of the tradition which makes the Greek King Menander to have been a Buddhist.

The age of the Graeco-Bactrian Kings—B.C. 180 to B.C. 100 must have been an age of great commercial and literary activity. Rome, which had just finished the Empire of Carthage, was in its period of greatest expansion. Syria and Egypt were still mighty monarchies, and the luxury which was already then invading Europe made great demands on Indian commerce. Greece and India, acted and reacted upon one another, and the influence mostly exercised by Greece upon India was not purely Hellenic, but Hellenic mixed with Syrian or Egyptian elements.

I have often thought, and here I write more by way of conjecture and suggestion, that it is to this period, when the intercourse between India and the Levant was so frequent, that we must ascribe the origins of Gnosticism on the one hand, and a part of the Mahayana Scriptures on the other.

Gnosticism I know did not make its formal appearance in the world until some time after the appear-

* Σανδράγουτος.

ance of Christianity, but Gnosticism was a very complex system of philosophy, if philosophy it may be called, and complex systems such as this do not spring into existence in a day. I look upon Gnosticism as a system of eclectic religionism which took something from Buddhism, and something from India, and something from Palestine and something from Greece, and which, when confronted by the rising tide and youthful energy of Christianity, took something from that faith too. But Gnosticism existed before Christianity, and it has so many points of similarity to Buddhism that it is impossible to avoid the inference that the two have had some connection with one another. Certainly, the Greek word *γνῶσις* has the same meaning as the Sanskrit *bodhi*.

It is in this period also that I feel disposed to place the beginning of some part of the Mahayana Scriptures.

It is known that there are among the Mahayana writings a few that select Amida as the sole Buddha to whom the devout seeker after salvation need have recourse, and who place in the western Paradise of Amida the Heaven which should be the immediate goal of this life's religious aspirations. The books themselves, as we have them, belong perhaps, from their style, to a later century—I am not judge enough to express an opinion on that—but we find in Greece and Rome at this time a tendency to Henotheism, the picking out of one God to the exclusion of others; we find the same in Hindooism in the devotion to Krishna as the one divine being who is worth cultivating out of the whole number of divine Beings, and I look upon Amida as the Buddhist answer to Krishna and the counterpart of the Gnostic conceptions of later times.

But to return to history. About 200 years before Christ, a Turanian tribe, sometimes spoken of as Scythians, and sometimes as Sakae, in Chinese as *Sse*, invaded India, and established a Kingdom in *Kashmir*, which lasted for fully three centuries. When Pur Lord was born, a Scythian monarch (an ancestor of the present Rajputs) was sitting on the throne of the largest and most powerful state of India; and when the first Christian preacher came to India, the sovereign of the state to which he is said to have come was the Buddhist sovereign Kanishka. (A.D. 64—120). Kanishka was not only one of the greatest Kings of the north of India, but also one of the most zealous of Buddhists. It was he who summoned the third, or, as some call it, the fourth Council of Buddhism, and it was he who, with the assistance of Asvaghosha and Nagarjuna, pushed the preaching of Buddhism far beyond the borders of India proper, to Tibet, to the country beyond the Himalayas and as far as Turkestan.

Kanishka's council, which was held according to the generally received opinion about the year A.D. 60 or 70, settled the Mahayana Canon of Scripture. What that Canon originally comprised is not exactly known. It certainly did not contain the whole of the multitudinous volumes which now belong to it, for many of these are confessedly of a much later date; but its principal books were certainly the so-called nine *dharma*s,* of which the *Mahaprajna Paramita Sutra* (Dai Hanuya Kyo) the *Lakṣa Vistara* and *Saddharma pundarikā* are the most important. The first of these contains the philosophy of the reformed or transformed Buddhism, the second, the earthly life, and the glorification of the Founder of Buddhism.

In the formation of the Mahayana Canon, Kanishka had the assistance of two great jurists who may be considered the founder of Mahayana Buddhism.

Nagayana, (Jap. Ryūjū) a native of Berar in Central India, the writer of the so-called Madhyamika Sutras, which maintain the philosophical doctrine of the *void*, a doctrine which permeates the Hanuyakyo, and which is found in some Greek philosophies, but very distinctly in the *Kénoum* and *πληρωμα* of Valentinus Basilides and other contemporary Gnostic writers. The Hanuyakyo is pantheistic, the impersonal essence from which Buddhas, gods and men alike emanate (Jap. *Shinago*), being a conception very much akin to that of the Gnostic Bythos (*πύθος*).

Kanishka's other coadjutor was Asvaghosha (Jap. Memyo), a poet and the author of a famous Sanskrit lyric, the *Buddha carita*, or Life of Buddha, which is an abbreviation or condensation of the *Lalitavistara* mentioned above.

Two points, connected with this period, deserve to be touched on.

* The nine *dharma*s are given by Levi in *Journal Asiatique* for 1892. In do not here transcribe the names of these books. It is, however, interesting to note that two of them are *Tantra* books and clearly belong to a later era. This brings the number of genuine Mahayana *dharma*s down to seven. There is a curious point worthy of being noted in Epiphanius Haeres, XXXIX. 5. Speaking of the *Sethians*, whom there is some ground for identifying with the *Sse*, he mentions that they venerate seven books: *ἐντά λέγοντες εἶναι βιβλία*.

Indian tradition says that Nagayana obtained his Mahayana during his sojourn amongst a tribe known as the *Nagas* or snake-men. It is perhaps only a coincidence, but it is certainly curious that one of the most prominent, though least known, sects of Gnostics was called the *Ophite*, or Snake sect.

It is also worth remembering that St. Thomas, the Apostle of Christ, is said to have preached in India during the reign of Kanishka, and that the Apocryphal "Acts of the Blessed Thomas," says that he was martyred in a city which has been identified with Kanishka's capital, and by a prince of the name of Misdes, who has been identified with Kani-hka's grandson Vasudeva.

The whole of the Sakya era, and of the Gupta era which followed it (these two eras embracing the first three centuries of our chronology), was an age of great literary activity. The Brahmans, who had been long waiting for another innings, were stirred to activity by leaders such as the great Sankaracharya in a fresh combat with Buddhism, which, divided into the opposing schools of the Greater and Lesser Vehicles, was no longer able to withstand the attacks of its determined and persevering foes, and though in A.D. 634 a fifth council was held under a King of the name of Silāditya to settle the differences between the two great schools, the day of Buddhism was over. It was attacked by Brahmanism on the one side, by the rising vigour of Mahomedanism on the other, and it fled from the sacred soil of India to recuperate itself in Tibet, China and Japan.

The rest of Buddhist history scarcely concerns India; but it should follow as a necessary conclusion to this paper.

About the year 800 A.D. a Buddhist monk of Peshawur, Asauga by name, preached a new form of Mahayana, known as the Tantra Buddhism, which consisted in engrafting the local deities of Tibet on to the Buddhas, so that the former were considered to be the personifications of the latter. This *Tantra* or *Yogachara* Buddhism was brought over to Japan by Kobo Daishi in the so-called Shingon sect, and by identifying the deities of Japan with the Buddhas, was the first to make a permanent place for itself in the religious consciousness of Japan. Thus the last formed of Buddhist sects was the first to take root in Japan, and the others came in reverse order—after the Shingon, the philosophic Zen and Tendai, which based themselves on the Hannya Kyo and Hokekyo, and after these the Pure Land sects of the Jodo, which took as the basis of their teachings the faith in the mercies of the one Buddha Amida.

At the close of the Lecture, Rev. C. F. Sweet asked Professor Lloyd how he could fix upon the year 481 B.C. as the exact date of Buddha's death? Professor Lloyd replied: "The date of the death of Buddha is fixed by the Second Council, which is known to have occurred 100 years after his death, and 50 years before the invasion of Alexander."

The CHAIRMAN then spoke substantially as follows:—You certainly will not expect me to say anything new regarding the history of Buddhism which Mr. Lloyd has so clearly outlined for us. He has made us all his debtors by his very interesting lecture. When he said in advance that he feared his sketch would not be instructive, he under-estimated, I think, the part which intelligent conjecture plays in instruction. Conjectures based on the careful collation of facts by one scholar after another have filled many a gap in history and it may well be that a trustworthy chronology of Indian Buddhism is among the possibilities of the future. If so, it will be reached through a series of conjectures each term of which will have had its value,—will have been instructive. Certainly the relation between Gnosticism and Buddhism, which Mr. Lloyd sees, is a matter of deep interest, and the points of similarity between the two systems are very striking. Incidentally Mr. Lloyd has referred to the transmission to Japan of one of the later forms of the Mahayana school, where it has become the doctrine of the Shingon sect. This reference suggests an important field for research lying before our door. It is no doubt true that the beginnings of Japanese Buddhism are obscure, but I think that investigations conducted under the guidance of the spirit which has opened so many closed doors in the history of other lands would yield results of great interest to the student of the history of religion all over the world. We must not forget that it is not merely the beginnings of Buddhism in Japan which should attract the student, for the growth of Buddhist thought and Buddhist institutions in Japan is not less worthy of patient, painstaking study. The

literature is abundant, superabundant, indeed, after the period of planting.

To one possessed by the historic spirit so sedulously fostered in these days in our best universities, the otherwise tedious path of him who undertakes to sift this mass of literature will be enlivened by many glimpses of the social life of the people, which, taken together, will enable him to reconstruct the society of olden time with a completeness hardly possible now. Certainly no adequate setting forth of that old life has yet been made, and the chasm which separates it from the life of to-day is by no means appreciated by most observers, even among those who have lived long in Japan; yet it is only those who by the constructive imagination have made the old days live again that can rightly measure the progress Japan has made and see the goal towards which her course is making.

While not strictly germane to the subject of the afternoon, before leaving the chair which you have kindly allowed me to fill for so many years, you will pardon me, I am sure, if I suggest for the benefit of the younger members of the society, two or three other fields of inquiry into which I trust they may see their way to enter.

The first is that of biography. The lives of a few of the leading men of Japan have been written, but there are many others of whom the world would like to know, especially if their lives could be shown in their natural environment. Some of the most interesting and instructive biographies will be those of men of lesser note, such for example as belonged to the little coterie of scholars of the Dutch language, in the first half of the last century, who might will be called the harbingers of the new civilisation. Here, too, the materials are abundant. A translation of a biography with suitable annotations would have the deepest interest.

Another line of investigation might well be the dialects, especially those of Kyushu, though those of the extreme north would possess hardly less interest to the philologist.

Another still might well be some department of modern life, such, for example, as agricultural education. Perhaps no country in the world is making more strenuous, or more successful, efforts to place its agriculture on a scientific basis. Witness the two Agricultural Colleges and the two grades of subordinate schools in, I think, every prefecture, not to speak of several schools with the specific object of training young farmers in the production of silk. Such investigations would not consist simply in the collation of the statistics published by the Department of Agriculture and Commerce; but in visiting the schools, studying their methods; observing their success in awakening an intelligent interest in practical agriculture on the part of the students; examining the attempts being made to adjust the life of the farmer to the new social conditions, etc. The problems of the Japanese small farmer are many and grave, far more so than most foreign residents dream, and whether we look at them from the point of view of philanthropy or from that of sociology, they should possess absorbing interest.

These examples are simply illustrations of the many and varied fields which are as yet relatively unworked. There are others not less inviting. But they are not to be looked upon simply as interesting. The results are bound to be instructive and who can tell but what some of them may sway in an important degree the current of the world's thought.

The CHAIRMAN then said that he had for several years derived great pleasure from his position as President of the Society; that he desired to thank the Society for the honour and the pleasure conferred upon him by his repeated election; and that he would most cordially bespeak for his successor the same warm support and sympathy that had been extended by the Society to himself.

Professor A. LLOYD said he was sure that many others would have been better than himself as President of the Society. But, since the Society had honoured him by electing him President, he could only express his warm appreciation of the honour and say that he would do all in his power to serve the Society efficiently.

On the proposal of the Chairman, every member of the Society rose to vote thanks to His Excellency Sir Claude MacDonald for his kind and pleasant entertainment of the Society. The CHAIRMAN declared the meeting adjourned.

ANTIQUÉ COINS OF JAPAN.

[READ BEFORE THE YOKOHAMA LITERARY SOCIETY ON FRIDAY, DECEMBER 18TH, 1903, BY DR. N. GORDON MUNRO.]

History, rigidly defined, is the narrative of past events compiled from contemporary record, and the written document is thus held to be the best witness of its truth. Judged by this standard, the dawn of Japanese history must be placed in the beginning of the eighth century of our era, for the first known record was not completed till the year 712 A.D. The twilight which precedes the dawn had begun, however, some three hundred years previously, with the advent of the Chinese ideograph, and it is safe to assume that the accounts of these three centuries are not entirely legendary. It may be called the protohistoric period of Japanese civilisation, and its interest to the numismatist lies in this, that it has been credited with the production of a coinage which has fallen into oblivion, and left the vestiges only of its former existence.

The period of Wado, which may be said to mark the dawn of higher civilisation, opened in the year 708 of our era, but the previous three hundred years were relieved from total darkness by the light, at first feeble and flickering, of writing and the rudiments of literature, which came from what is now Korea, in the beginning of the fifth century A.D. The arrival of Buddhism, a hundred and fifty years prior to the Wado period, must have carried in its slow but steady progress, the elements of such learning and enlightenment as the use of the ideograph and the higher moral precepts of Buddhism could bestow on those who came within its reach.

In many other ways, the increasing intercourse with China and Korea, brought, not only literature, but the knowledge of various arts, such as silk rearing and weaving and the working of metals. The constant warfare of these early times had, doubtless, maintained the art of weapon-making at the state of high efficiency which it had reached at the time of the great invasion, or emigration, a thousand years before the Wado. We are told that this protohistoric period produced a large image of Buddha, cast in bronze, and garnished with gold, so that the arts of metallurgy were not unknown.

Most of the bronze ornaments, mirrors, &c., which have been found in the early sepulchral tombs are, however, of Chinese or Korean origin, and the scarcity of copper, and probably of iron was such, that weapons and mirrors were copied in stone and placed in the tombs for the service of the dead. The scarcity of gold and copper is a theme upon which the old historians have much to say, and it seems as if the efforts of the protohistoric Japanese were mainly directed to squeezing tributes of these metals from the minor kingdoms which now constitute Korea. Chamberlain and Aston have shewn that these efforts were not always so successful as the legendary accounts would lead us to suppose.

The dolmens, or stone sepulchral chambers of the early Japanese, were not built later than about 600 A.D., and at this date it is practically certain that no coins were in existence. Mr. William Gowland, who had exceptional opportunities of studying this subject, and who examined no fewer than four hundred dolmens, states, with regard to the burial of the dead: "When a warrior was laid in these rude stone chambers of the dead, his wants in a future world, where he was supposed to continue his existence, were supplied in unstinted measure. He was clothed in his robes, adorned with his personal ornaments, his implements of the war and of the chase, and the bits and trappings of his horse were all placed near him. Around, and at the entrance of the dolmen chamber, were arranged offerings of food, water, wine and flowers, in vessels of pottery, some of which are of elaborate forms." But, "coins are

absent," he tells us. I have visited many of these tombs, and made diligent enquiry about the existence of coins therein, but have been unable to find a solitary instance where they were found in the dolmens proper.

We know that coins were made during the Wado period, and we know that they were then placed in the graves of the dead, as a necessary part of their outfit. Had they been in existence during the dolmen period, they would almost certainly have been found in these tombs.

During the century that elapsed between the end of the Dolmen Period and the beginning of Wado, there is no valid evidence that there was a metallic currency in Japan. Such had been used in China for twelve centuries before the Wado period, and I confess that I was greatly surprised to find that coins were lacking in this country, so late as the beginning of the eighth century.

It is stated in the historical works, "Nihon Shoki" and "Dai Nihonshi," that a silver coin was made as early as the reign of the Emperor Kenso, (485-487). The statement in the "Dai Nihonshi" has, however, evidently been taken from the "Nihon Shoki," and the latter has inferred it from an obscure passage in the "Nihongi," the historical accuracy of which is very much open to question, even, as Mr. Aston has pointed out, as late as the 6th century.

Several pieces of silver have been found, bearing something like the same badge, or stamp, and these have been claimed by certain writers as the coin in question. The first of these was discovered in the Province of O-Sumi, during the period of Kyoho (1716-1735), then in the Settsu Province in the 11th year of Ho-Reki, (1761), and afterwards in several other places. This so-called coin, however bears no written character, whereby its age or quality might be ascertained, but only a mark which has nothing to distinguish it from the stamps placed on precious metals as a guarantee of weight.

One of these so-called coins, which I will shew to you, is said to have been found in the soil at the village of Kawanishi in the province of Yamato, in the 3rd year of Kei-O, (1867,) but as the Japanese are known to have been collecting coins for fifty years before the period of Kyoho, when the first coin of this kind was discovered, and as imitations of old and rare coins have been made since the 17th century, I look upon these specimens with great suspicion. This silver piece has apparently been cast in a rough mould, and then stamped with a design, which has been variously described as that of the sun, moon and three stars, a flower, a bunch of riceheads, all of which ideas cannot be correct. If it is symbolical of anything, the rice supposition may be near the truth for there is little doubt that rice was used for money even for centuries after the Wado period. It is possible that it may have been used in some locality as a metal certificate, representing a definite quantity of rice, just as the modern banknote bears the name of a definite amount of gold or silver. On the other hand it is quite as likely that these marks were of the same significance as our "hall mark" to guarantee the quality of the metal, or perhaps its weight.

Another so-called coin is made of copper, and is supposed by some authorities, without any serious reason that I can discover, to have been in circulation even before the silver one. It is illustrated in the older books, but no specimen of it is known to exist. It appears to have been round, with an oval hole in the centre, and the marks of four crosses, or what have been called "symbols of rice plants," on one side. To my poor judgement, they might be rice fields as easily as rice plants, and seem to take after the four leaved shamrock more than either of them. These marks are probably pictorial, but as they do not correspond to any known character, they cannot speak for themselves, and we cannot speak for them.

The same remark applies to the silver piece. Moreover as this piece was produced in the latter part of the 5th century, if the books are right, and the written character was introduced not later than the beginning of the same century, it would be very remarkable if it did not bear the Chinese

ideograph, especially when we consider that the written coins of China must have been known at that time to the Japanese.

In ancient times it is probable that the small arrowheads, found in Japan, made of agate and other superior stone, were used as a medium of exchange, while the claw-shaped ornaments of similar material and the beads of crystal and stone, found in the dolmens were sometimes used for a similar purpose. The rings of copper too, covered with gold and silver, which served an ornamental function, may have been, like the Keltic and other primitive rings of Europe and Asia, used as a metallic currency. Shells were almost certainly used as they have been in China and southern Asia, not to mention America, in quite recent times. In this connexion, it is interesting to note that those characters in Chinese having reference to money, usually have "Kai" meaning a shell, as a component, surely a suggestive survival!

Mr. Hamada in an interesting pamphlet, gives many reasons for thinking that rice was the current medium of exchange in the protohistoric, and even later times. He says that the word "ine," rice, in the stalk, may be recognised in "nedan," price, and that the word "atai" also meaning price or value, is derived from "atashi," rice equivalent. Many other reasons are given for his belief, which time does not allow us to discuss at present, but I think that he makes out a good case for the hypothesis that rice played the part of coin so efficiently that the need for a more portable currency was not acutely felt.

The value of rice itself, however, must have been subject to severe fluctuations, from climatic and other causes, such as the devastation accompanying rude warfare. During the latter part of the 7th century, several appointments of officials were made relating to the establishment of a mint and the regulation of taxation, weights and measures, &c. There is no evidence that coins were actually produced, for the reason probably that copper was not found in sufficient amount to justify its use as a circulating medium. One of the most notable events in the history of Japan, the physical basis of her later civilisation, the auspicious omen which ushered in the accession of the Empress Gemmei, was the discovery of an abundant supply of copper in the Province of Musashi. This occurred in the 4th year of Keiun, which was thereupon changed to Wado, meaning Japanese Copper.

When this discovery was announced, the hearts of the Empress Gemmei and her ministers must have quickened with joy. At last their hopes were realised; their land had opened out its hoard of the precious metal, which would give wealth and prosperity; a metallic currency would remove the stigma of barbarism and advance the country in the esteem of China, the source of all its civilisation, than which no higher culture could be imagined at that time. Thus, under feminine sovereignty, Japan made its first firm stride in the march of civilisation. In the 5th year (712), the dawn of history opened with the completion of the "Kojiki," or records of ancient matters. All but the later chapters are, as Professor Chamberlain has pointed out in his translation of this work, merely records of folk lore and oral tradition, but it is none the less of great value to the archaeologist and historian. By the use of the etymological spade he has found amongst the often incoherent verbiage of its pages, the material from which he has been able to sketch the life of the protohistoric Japanese. If money was known before the publication of the Kojiki, it is strange that there is no mention of it in its pages.

From the 1st year of Wado to the 2nd year of Tentoku, that is to say, from 708 to 958 A.D., a period of two hundred and fifty years, twelve coins of different denomination were issued by the Government of Japan. Such coins are called "Sen," a word of Chinese derivation, meaning a fountain, hence something which flows, like our own word "Currency," which has originated from the same basic idea. "O Ashi," literally "honourable foot," which is the common word for this money, also conveys the idea of movement. Although the expression "Copper coinage" is used to describe this form of money,

every one knows that the copper is diluted with tin, zinc, and sometimes lead, and should properly be called bronze. The quality of bronze may vary considerably, and in the case of the twelve antique coins of Japan, there is to be noticed a gradual deterioration from the first to the last, not only in size but in quality. The cause of this deterioration is to be found in the fact that the finds of the Wado period became exhausted and great difficulty was experienced in getting copper for the mint. The great wave of Buddhism which now swept over the country, served to increase this difficulty, for vast amounts of coin, copper ornaments and utensils as well as fresh supplies went into the melting pot, in order to make the images of Buddha, thousands in number and sometimes of great size, which were erected everywhere. The twelve bronze coins which I shall try to describe this evening, are known to Japanese collectors as the "Jiu Ni Zeni," or twelve *sen*. The number might be increased to fourteen by the addition of a gold and a silver coin but it is doubtful whether these went into circulation. The first of the Japanese *sen* is usually called "Wado Kaichin," and is so named in all Japanese works on the subject. The characters, as in all the twelve antique *sen*, read like the figures of a clock. From the Tensho period onwards the reading is crosswise, from above downwards and from right to left. The late Mr. Narushima Ryuhoko pointed out that the character "Chin" should be regarded as a contracted form of the character "Ho," so that this coin would properly read "Wado Kaiho." I will mention his reasons when we come to look at the photographs of the coins. He also gave cogent reasons for thinking that this coin, in its later and perfect form, was really cast by Chinese workmen, imported from the mainland of China.

The size and weight of the Wado *sen* call for a few remarks. It may be stated generally, as applicable to all the antique *sen*, that the first issue of each denomination is always larger than those which follow. To some extent this is due to the shrinking of the clay mould in heating it for the reception of the molten metal. If the *sen* which have been cast in one mould are used for making another, the resulting coin will be less in diameter than those of the first mould. Doubtless also the differences in size which are so noticeable in these coins were due in some measure to the fact that they were coined in different places, according to the supply of copper available at the time.

The intentional debasing of the coinage in order to reap a profit, must, however, be regarded as the main reason for the progressive deterioration of these coins from the first issue to the later ones. The officials to whom this privilege of minting was entrusted were sometimes the highest in the land, and in those rude times their conduct was above criticism. When the Government decided to issue a new coin, the last issue of the former one was so poor in size and quality that the new *sen* was usually quite superior. It was issued at the rate of one to ten of the previous coins, and its acceptance by the community was probably facilitated by this fact. This difference, however, between the value of the old and the new, must have been productive of much discontent, though the possession of money was chiefly limited to the upper, or wealthy classes, who perhaps found means to recoup themselves for this sudden, and rather startling, fall in exchange.

In the 4th year of Wado, the price of rice, or its ratio to copper, was fixed by Government edict. Six "Sho" or sixty "Go" of rice, could then be had for one cash or *sen*, usually called in its unit capacity a "Mon." At present the price for the average quality of rice is about one *yen* for the same amount. Presuming therefore that the measure called the "Go" is the same now as then, the purchasing value of the Wado *sen* was something like a thousand times that of the present day. A Japanese man consumes about five "Go" of rice daily, so that he could have lived in the Wado period for twelve days on one *sen*, with the addition of a few "snacks" of fish and vegetable. At the present time the wages of a carpenter are about a *yen* per day. Now the *yen* is equal to a thousand "Mon," of the smaller *sen*,

and about five hundred of the larger ones, so that he could have provided himself with rice, if we count only five hundred *sen* to the *yen*, for sixteen years, on the wages which he received for one day's labour in 1903.

At that period the highest officials of the realm, chiefly princes of the blood, received in one year, 30 "Hiki" of cloth, 100 hanks of silk, and the princely salary of 2000 "Mon," the equivalent of two *yen*, at the present day, while the 8th class received 1 "Hiki" of cloth and 20 "Mon" per annum, equivalent to two *sen*.

It would appear that the Wado Kaiho was coined for fifty years after its first appearance, for it is stated in ancient history that in the second year of Tenpei Hojo, 758, the Empress Koken gave permission to one of the great family of Fujiwara, upon whom she looked with favour, to cast coin for the Government. I need scarcely remind residents of Japan, that the Fujiwara family, though not occupying the throne, were practically the rulers of Japan from the years 640 to 1050.

In the 3rd month of the 4th year of Tenpei Hojo, 760, the Empress Koken having gone into retirement, three new coins were minted, of copper, silver and gold respectively. There is little doubt that the copper coin alone went into circulation. It is called the Mannen Tsuho, or Current Treasure of Ten Thousand Years. The characters are said to have been written by Kibi Mabi, a scholar and man of genius, and the founder of the first syllabic writing called the Katakana. It was issued at 1 to 10 of the previously existing Wado *sen*. The reason given for its issue was also stated previously to the introduction of nearly all the new coins of the antique group, namely that there were many forgeries, and that the currency had become so debased that it was necessary to issue a new *sen*. In this case the forgeries were said to equal in amount the Government currency.

Of the silver coins which were made along with the Mannen Tsuho, there is only one genuine specimen in existence, which is in the possession of Mr. Kameoka Seikoku, of Osaka. The motto reads "Taihei Gempo," or original Treasure of Great Peace. It was issued at the rate of 1 to 10 of the copper coin.

The gold coin was called Kaiki Shoho, or Initial Foundation of Excelling Treasure. This was in reference to a gold currency, but it was not carried into effect. Like the Taihei Gempo, it has, with a solitary exception, vanished from human ken and left only a host of conjectures. The one specimen remaining is now in possession of the Imperial Household Department. It was exhumed from under the gateway of the Sai Dai Ji temple at Nara, in company with one Taihei Gempo, one silver Wado *sen* and one Mannen Tsuho. It is stated in the "Sei Sui Ki," that in the second year of Jisho, 1178, Komatsu Naidaijin placed 99 pieces of gold under the pillow of his sister, the wife of the Emperor, and prayed for her quick recovery. These are said to have been Kaiki Shoho coins, but this belief appears to me to rest solely on the assumption that there were no other gold coins in existence. Pieces of gold, stamped with their weight were, however, in use at that time, and besides it was quite customary to use paper substitutes for this purpose, which, after the Chinese fashion, were afterwards burned as an offering to the god whose aid had been sought. It seems rather an economical plan, and reminds one of the two persons who undertook to place £10 to each in the coffin of a deceased friend. A having conscientiously put his amount therein B signed a cheque for twenty and pocketed the change. While it is not certain that Komatsu Naidaijin gave a cheque for 99 gold coins to the god, it is equally doubtful that he paid it in cash, and we cannot accept the story as a proof that the Kaiki Shoho was current at this time.

The Empress Koken, who had resigned in favour of the Emperor Junnin, resumed the throne while the latter went into exile. On the second assumption of power, she took the name "Shotoku," "Denoting (or proclaiming) Virtue," not a very appropriate title. The year name was also changed to Tenpei Jingo. The expression "Jingo" is written Jin-Ko, which

may be rendered "Divine Merit." Excesses sometimes meet, and there is an expression, much used in England at one time, "By Jingo," which I venture to call your attention to. It is derived from the Basque word "Jinkoa," i.e. "God," the Lord of the High, thus having the same meaning as "Jin," God, "Superior Being," the same as the Japanese Kami, the Shinto God, literally Above, like kami, the hair of the head. The Basque language, from which this slang word has come, is perhaps the most ancient in Europe and has strong affinities to the Mongol group, so that I see no difficulty in supposing that these two words had a common origin.

The coin "Jingo Kaiho" is said by Yoshikawa Iken, to have been written by the scholar Kibi Mabi, like the Mannen Tsuho. It is translated by a high authority on the Japanese *sen*, as the new treasure of the period of Jingo, but this is not correct. There was no period of Jingo, this word not having been used alone. We may call the motto of this coin, "The Original Treasure of Divine Merit." The Jingo Kaiho was issued at the same value as the former coin, the Mannen Tsuho, and is the only one of the antique group which was not valued at 1 to 10 of those that went before. In the eighth month of the 3rd year of Hoki, 772, it was further decreed that the value of all coins, old and new, would henceforth be the same, as it was found that the people kept the old *sen* and used only those recently made.

In the beginning of the reign of the Emperor Kwanmu, in the 4th month of the 1st year of Enryaku, 782, the Government decreed that as things were sufficiently prosperous, and there was enough money in circulation, the officials of the Mint should be retired. Eight years later, the necessity for a fresh coinage became evident, and officials were again appointed to the Mint. No definite step, however, seems to have been taken till the 11th month of the 15th year, when an edict appeared to the effect that many counterfeits existed, which were not worthy of being called current coin, and that therefore a new coin would be introduced which would be issued at the rate of one to 10 of the old ones. These latter would be removed from circulation within four years, counting from the following year. The new coin was called the "Ryubei Eiho," or Eternal Treasure of Prospering Peace.

The delay in issuing this *sen* may have been due to the scarcity of copper, for the enthusiasm for Buddhism was finding expression in the erection of thousands of images throughout the country. The great Daijutsu at Nara, erected in 775, alone consumed 868,000 *hin* of copper.

Many edicts were set forth about this time, one of which is of unusual interest. The Dai Nihon Kwaheishi, quoting from the Roshui San Dai Kaku, says that on the 23rd day of the 6th month, of the 17th year, a further decree appeared to the effect that "the use of coin is to give general convenience to all alike, but that the officials and farmers in the five Provinces around Kyoto, were saving too much money, while there was not sufficient in the city. This, it said, is contrary to our intention to confer equal benefit on all and it is strictly forbidden." Then comes the kernel of the whole thing. "All possessed of means must contribute money to the government, and taxes must be paid in cash. Those guilty of secreting money will receive the punishment of lawbreakers, and their property will be divided into five portions, one-fifth of which will be given to the informant of the fact, while the remainder will be forfeited to the government." The Provinces of Iga, Omi, Wakasa, Tanba and Kii were exempted from this law. The probability is that there was not enough money in these latter Provinces to risk a quarrel with their rulers.

In the third month of the 9th year of Koin, the governor of Nagato Province was appointed chief director of the Mint, the officials of which were one director, one assistant director, two inspectors, three accountants, two coiners, one chief moulder and five clerks. In the 11th month of the same year, 818, the "Fuji jingo" was minted. The characters stand for "Divine Treasure of Wealth and Longevity," surely a high sounding and felicitous title. It steps forth amid

flourish of rhetoric and smiles its benevolent formula upon the world. To be sure, it is not so large as its predecessors, but then we hear no reproaches this time about the degenerated state of the currency; what it lacks in size, it wins in its message of goodwill. "Wealth and long life to you," it says, "if you keep me long enough you will never want for either." We can imagine that its genial wish found an echo in many a wistful heart, and that the chord of superstition responded hopefully to the sentiment.

Probably there was quite a rush for it, notwithstanding its diminished size. Some one must have chuckled over it; surely not Kukwai, the famous priest, the sage of writing and the founder of the Hira-gana, who is reputed to have written some of the inscriptions? More likely it was a Fujiwara, through whose "personal influence" the Emperor Saga was induced to take a hand in the writing of this coin.

In the first month of the 2nd year of Showa, 835, a decree appeared referring to "the secret counterfeiting which undoubtedly renders the coinage worthless. To remedy this a new coin shall be issued." This coin was named the "Showa Shoho," or flourishing Treasure of Showa. According to the Zoku Nihon Koki, the Emperor Nimmie, in a special edict on his accession to the throne, gives the reason for the change of the period from Tencho to Showa.

"I succeeded to the throne of the peaceful Emperor (his father, then living) and now the time has come to give a new name to the era, thus changing the 11th year of Tencho to the first year of Showa." In explanation he stated that he was following the custom of a thousand Emperors in altering the Nengo, or year name, on their accession and in choosing an auspicious title in order to have a fortunate commencement to each reign. There seems to have been special stress laid upon the succession of the Emperor Nimmie to "the Peaceful Emperor," and we shall probably not be wrong to translate the word Showa, as "Succeeding Peace."

In the 15th year of this period, 818, the court astrologer announced that rain was impending, that great injury might follow and the year's produce be ruined, unless special precautions were taken. He advised that prayers be offered up to the great Deities throughout the whole country for protection against calamity. For this reason, the new period of Kasho, "rewarding or praising good luck," was initiated. In the 10th month of the 1st year of Kasho, a decree said, "Heaven has given good fortune, and the Nengo has been altered: if we do not alter our currency, some calamity will surely befall us. The new coin will be named 'Chonen Taiho,' and will circulate at the rate of 1 to 10 of the old coin." A nice way to bolster up a falling currency! Having just escaped a famine through an appeal to the Gods, and the adroit change of the year name, they must now propitiate the Bugaboo lest worse things befall them. The Chonen Taiho thus came into being, but it did not avert a famine, which visited the land in the 10th month of the 2nd year. To relieve this 500,000 Mon were distributed amongst the poor of the capital, but history does not relate whether relief was extended to the more remote districts. The next coin in the series, called the Nyucki Jimpo, was issued in the reign of the Emperor Seiya in the 4th month of the 1st year of Tekwan, 859, at the same extraordinary rate of 1 to 10 of the old *sen*, notwithstanding its smaller size and general inferiority.

This period of Teikwan, "Beholding Chastity," witnessed the production of another chaste coin, which is the least worthy of the antique *sen*. It is known as the Jogwan Eihō, or "Everlasting Treasure of Teikwan," called in this connection Jogwan. According to the San Dai Jitsu Roku, considerable difficulty had been experienced, and no wonder, in persuading the public to take kindly to these latter coins. By an Imperial edict the people were accused of refusing, sometimes as many as two or three out of ten *sen*, and of trusting to their own judgement, instead of considering that small defects do not necessarily interfere with their circulating as coin. This notice was ordered to be placed on all the high-

ways, and the threat was held out that any one caught refusing such coin would be whipped in court. The justice of this proceeding is made apparent by the decree, published in the 1st month of the 12th year of Teikwan that the coins which were then in circulation were of little or no value, and that a new coin would therefore be minted.

Time does not allow me to give detailed evidence of the great dearth of copper which now prevailed. As the result of the exertions of special envoys who had been sent to inspect all likely places where copper might be found, the coin called Kanpei Taiho, or great Treasure of Kanpei (Fruitful Peace) was issued, in the first year of that period, 889. This coin was a recast of the former coins with a leaven of fresh metal.

In the 11th month of the 3rd year of Engi, (903) "Prolonged Gladness," in the reign of the Emperor Daigo, the Kanpei Taiho *sen* were recast into the form of the Engi Tsuho, or Current Treasure of Engi. The feelings of "Prolonged Gladness" on the part of those who were compelled to give ten Mon of the former currencies for one of theirs may be better imagined than described. We come now to the last of the twelve antique *sen*, namely the Kengen Taiho, or Great Treasure of Cosmos. According to the Kokon Sennkwa Kan, the celebrated scholar Ono Dofu, who began seriously to learn the art of writing when over fifty years of age, and Fujiwara, also a noted writer, were asked to write the characters for this coin. The former however, owing to visual infirmity pleaded that he could not write the small characters required for this purpose, while the latter begged to be excused as he was in mourning at the time. This double refusal seems to be more than accidental. It must have been a more difficult task to write on these dwarfed and degenerate *sen* than on the ample surface of a Wado or a Ryuhei, but it was not insuperable, and the refusal of these scholars to do so, suggests a sly rebuke. Two others were chosen to compete for this honour, and one, Aho Munepuki by name, was finally selected. It was issued in the 2nd year of Tentoku, 958. It would have been quite impossible for me to have given you a full account of the antique *sen* in the time which has been at our disposal this evening, and you will understand that we have only had a sketch of a very small part of the subject of Japanese coins. The twelve *sen* only bring us to the middle of the tenth century, beyond which lies the great field of Japanese mediaeval and modern coins. Though, owing to constant warfare as well as poverty of metal, the government ceased coining till the 15th year of Tensho 1586, still the coins of this interval are of great interest. From then till the present day, there is a host of *sen* of the most varied kind, the more important of which I have brought with me, for your inspection.

Enough has been said to show that the gradual decline in size and quality of the Jiu ni zene, must be attributed primarily to a corresponding diminution in the output of copper. Although we have smiled at the ingenious excuses that usually preceded the issue of new denominations, and which had been the almost invariable prelude to an extraordinary rise in value (ten-fold that of the former coins), it is well to remember that the cost of the new coin must have been greater owing to the dearth of the red metal. Yet, during this period of two hundred and fifty years, excellent money was being made in China, at moderate cost, so that it Japan had been able to give anything substantial in exchange, copper might have been imported and coined at a substantial profit. The probability is that Japan was too poor to buy this metal, and had to depend almost entirely, after the Wado period, upon her home supplies. We must also regard this extortionate price of the new, in relation to the old, *sen*, as a species of oppression, initiated by the high, sullenly borne by the middle, and probably affecting but little the lower classes, the majority of whom were not likely to come into contact with hard cash. We must also remember that Japan does not stand alone in the extortionate use of a debased coinage.

THE BOOKSHELF.

A Handbook of Modern Japan, by ERNEST W. CLEMENT; Chicago, A. C. McClurg & Co.

MR. CLEMENT disavows any intention to make this book of nearly four hundred pages an exhaustive encyclopædia of "Things Japanese," yet, after glancing through its contents and noting that it seems to deal with every conceivable subject connected with this country, and to do so with discrimination and a due sense of proportion, it is difficult to describe its information as anything else but encyclopædic. His object, he tells us, is to portray Japan in all its features as a modern world power. He expects to satisfy the specialist not by furnishing all materials but by referring for particulars to other works where abundant materials may be found; and he expects that it will satisfy the average reader by giving a kind of bird's-eye view of Modern Japan. That the book will meet its author's expectations can not be doubted. There are twenty-one chapters which range over a very wide field. An introductory section on the physiography of the country is followed by "Industrial Japan," "Travel, Transportation and Commerce," "People, houses, food, dress," "Manners and Customs," "Japanese Traits," "History (old Japan)," "History (new Japan)," "Constitutional Imperialism," "Legal Japan," "The New Woman in Japan," and so on, the closing chapters being entitled "Japanese Christendom," "Twentieth Century Japan," "The Mission of Japan." A large appendix supplements the information given in the body of the book, and an index which, so far as we have tested it, is both full and accurate, facilitates reference. Add to this that the work is decidedly up to date, that it has a useful map, that the photographs of prominent personages and places are good, and that the printing and binding are highly creditable, and probably enough has been said to recommend the volume to people interested in this country.

Katei Seiva, by Y. HORIGUCHI. Y. Horiguchi, Aoyama Gakuin, Tōkyō; or Methodist Publishing House, Tōkyō; 20 *sen* a copy, postage 4 *sen*.

THE Story Hour—how much these words mean to those who, even though it be long ago, have heard stories in that hour between the two lights! How few there are, alas, of such charming stories as these in Japanese! The translator, who has rendered the stories in a way preserving the spirit and interest of the original, has been able to find no equivalent for the title; so he calls his book *Katei Seiva*, or, literally *Home Pure Stories*.

Of this Story Hour and its stories, those well-known authors of tales for children, Kate Douglas Wiggin and Nora A. Smith, write in the introduction as follows: "Come, tell us a story!" It is the familiar plea of childhood. . . . There are few preliminaries and no formalities when the Person with a Story is found. The motherly little sister stands by the side of her chair, two or three of the smaller fry perch on the arms, and the baby climbs up into her lap. . . . This charming little drama takes place in somebody's nursery corner at twilight, or around somebody's fireside just before the children's bedtime. . . . She chooses the story as one of the vessels in which she shall carry the truth to her circle of little listeners. . . . Make a mental picture of a ring of listening children in a San Francisco free kindergarten. . . . To such an audience were the stories in this little book told. . . . Stories help a child to form a standard by which he can live and grow, for they are his first introduction into the grand world of the ideal in character. . . . Stories bring the force of example to bear upon children in the very best possible way. There we can speak to the newly awakened soul and touch it to nobler issues."

The stories in the original book have passed into the 34th thousand. It is to be hoped they will have some such popularity in their Japanese form. They have a Japanese form, for "Dick Smiley's Birthday" becomes "*Denbichi no Tan-jōbi*," and "Mrs. Chinchilla," the cat, appears as "*Chinchi ra Fujin*." We read, besides, of George

Washington when he was little and when he was great; and we are told of the first Christmas, and "why we try to make every one happy when it comes each year."

Try if Japanese children can be made happy—and why should they not be?—with these stories which have brought happiness and new light to thousands of children since they were first told in that cosmopolitan kindergarten in San Francisco. "Pat is there with a gleam of humour in his eye. Abraham, trading tops with little Isaac, next in line. Hans and Gretchen, phlegmatic and dependable. François, never still for an instant; Christina, rosy, calm, and conscientious; and Duncan, canny and prudent as any of his clan." F.M.

The New Era in the Philippines, by ARTHUR J. BROWN; New York, Fleming H. Revell Company.

The Rev. Arthur J. Brown, D.D., who is Secretary to one of the largest missionary Societies in the United States, (the Presbyterian) paid a visit to the Philippines to gather the information which he has placed within the covers of this well-printed book. He has viewed the situation from the point of view of an American citizen as well as from the standpoint of the missionary and has infused into his narrative some of the shrewd, penetrating humour which is indigenous to the soil of the United States. Mr. Brown has gone thoroughly into the many questions which now confront the American administration and while recognising the difficulties which surround each and every one, is very hopeful of a successful solution for them all. He does not spare the back-sliding and moral obliquities of his countrymen where he sees occasion for reproof and his advice and suggestions for amendment should prove all the more acceptable by reason of their moderation. To show the wide range of Mr. Brown's investigations and the thoroughness with which he has covered the ground we may mention the headings of some of his chapters. They are: The Labor Problem in the Philippines; The Chinese in the Philippines; Travelling; Health; Climate; Cost of Living; The Catholic Church, its attitude toward Americans, and vice versa; Progress of Protestantism; Medical Mission Work; Public Schools; Our Duty as a Nation; America's Prospect in the Islands. Mr. Brown deserves praise for his scrupulous fairness when dealing with the thorny question of the Catholic Church and its attitude towards the American administration, and this chapter deserves the careful consideration of all interested in the moral and religious welfare of the Philippines. As we said above, Mr. Brown is full of hope for the future of America's new possessions and he foretells also a sweeping victory for the Protestant missionaries who have so recently entered the field. The volume is illustrated by several photographs, but they have not come out so clearly as one could wish.

The Heart of Rome, a Tale of the "Lost Water," by F. MARION CRAWFORD: London, Macmillan and Co., Ltd., Yokohama, Messrs. Kelly and Walsh.

Mr. Francis Marion Crawford has won for himself an enviable niche among contemporary novelists for his sympathetic studies of modern Italian life, and his latest work, "The Heart of Rome," but enhances his reputation. Always a facile craftsman his delineations of the characters of the Baron and Baroness Volterra, Donna Clementina, and the members of the House of Conti, particularly the charming fair-haired daughter of eighteen summers, the old lawyer and others are admirable, and among the best of any in the list of his creations. The interest of the story, too, is such that one never loses sight of it through all the meanderings which Mr. Crawford's pen always forces him to trace ere he draws to a close, and the interest deepens until the climax is reached. Altogether this is a book with which to pass away the hours very pleasantly, even at the festive season.

Collins' Graphic Dictionary; Yokohama, Kelly & Walsh, Ltd.

There must surely be a great demand for Dictionaries of the English tongue nowadays, for during the past twelve months several have reached us for review. They were all excellent of their kind, but the latest arrival, "Collins' Graphic Dictionary," easily takes precedence of them all. It is published in England at 3/6, and when we mention that it is an etymological, explanatory, and pronouncing dictionary, with copious appendices and 15 coloured plates, together with hundreds of illustrations in the text, some idea of how good a bargain it is, can be gathered. Mr. A. M. Williams, M.A., Principal of the Church of Scotland Training College, Glasgow, who has edited the work, says in his Preface:—"The Graphic English Dictionary has been prepared for the convenience of the general reader of current literature—newspaper, magazine, or book. In these occur words whose pronunciation, meaning, and derivation are not familiar; English phrases whose import and origin are not obvious; current foreign expressions that are not easily understood; allusions to places, persons, and classical passages in literature which are not comprehended and are difficult to trace." The Dictionary besides gives in handy form much information that otherwise would have to be sought for in many books, some of which are not easily accessible. The clear bold type—the word under discussion standing out in plain black English lettering—is admirable and greatly facilitates reference. It is a dictionary, in fact, that any school-boy or school-girl would greatly prize as a Christmas gift and we commend the idea most cordially to parents and others on the lookout for something suitable. But the book also appeals to "grown-ups" as well, for it is excellent in every way in which a dictionary can be excellent, and marvellously cheap withal.

L'Armée Chinoise, ancienne, nouvelle et dans l'avenir, par M. le Général Frey, de l'armée coloniale.—Un volume in-8°, avec une carte en couleurs des régions de l'Extrême-Orient, broché, 3 fr. 50 (Hachette et Cie, Paris).

We have received the above from Paris, together with the following publisher's note:—Dans ce volume, l'auteur—ancien commandant du corps expéditionnaire français, pendant la marche de l'armée internationale qui, en 1900, se porta à la délivrance des Légations assiégées dans Pékin—après avoir passé en revue l'organisation de l'armée chinoise ancienne, nous montre comment se comporta cette armée pendant la dernière campagne de Chine, et nous donne son appréciation sur sa valeur, à l'heure présente.

Il déclare qu'il faut désormais se garder de considérer cette armée comme une force négligeable et prévoit même que, dans un avenir peu éloigné, celle-ci pourra être en mesure de résister aux entreprises d'une et peut-être de plusieurs puissances occidentales.

A l'occasion de la nécessité du maintien de l'intégrité de l'Empire du Milieu l'auteur aborde la question d'Extrême-Orient et fait ressortir la connexité d'intérêts de la Chine, de la France et de la Russie dans cette question.

Cette étude intéresse ainsi autant le monde diplomatique, le monde colonial et le grand public que le monde militaire. et aussi bien en France qu'à l'étranger.

SHIPPING CASUALTIES.

The Osaka Shosen Kaisha's steamer *Nishiki-kawa Maru* (309 tons), was wrecked on the morning of Dec. 17th off Mizobe, Wakayama prefecture. Many persons are reported to have been drowned. Details are not yet given. Owing to the gale, another steamer, the *Kaishin Maru* (63 tons) was wrecked on the same day off Tobo, near Nagasaki. The crew were saved.

A telegram from Sapporo states that owing to a storm, some junks capsized off the districts of Urakawa and Yamakoshi, with the result that four

fishermen were drowned and six others are missing.

It was estimated in Berlin on Nov. 28 that 100 persons lost their lives in the recent storms on the North Sea. All vessels arriving in the West and the Elbe reported seeing much wreckage and many corpses drifting about. They were unable, however, to pick up any of the bodies owing to the high seas which were running.

A telegram from Kobe announces that a lighter of the Kawasaki Shipbuilding yard was in collision with the steamer *Hijikawa Maru* on Dec. 16th off that port. The lighter capsized and a workman was drowned.

The Nippon Yusen Kaisha's steamer *Shinagawa Maru* (1,343 gross tons) which left Yokohama on Dec. 19th or Yokkaichi, went ashore on the following day off Ommae Cape, Totomi province. Details of the accident are not yet known but all the passengers and cargo are safe and the ship is known to have sustained severe damage. The *Hokkai Maru*, which had just left Atsuta, Idzu province, owing to the storm on her way from Yokkaichi to Yokohama, was instructed on the night of the 20th to proceed to the place and she probably started on the following morning. Early on the morning of the 21st, the steamer *Oni Maru* left Yokohama for the scene of the accident with a salvage party on board.

Information from Osaka to the *Fiji* states that Mr. J. Harada's steamer *Kinai Maru* (2,015 tons) took fire on the night of Dec. 17th off Bingo province on her way from Shanghai to Kobe with a cargo of Chinese cotton. She entered the Enoshima dock, Bizen province, where the outbreak was subdued. The cargo stored in the first hold was destroyed. Further damage does not seem to have been caused to hull or cargo. The steamer was to leave there on the following day for Kobe. The Nippon Marine Insurance Company insured the hull for yen 60,000.

The launch *Lena*, which left Hongkong some time ago for the Philippines, foundered near Iloilo, while in tow of the German steamer *Patani*, from Manila to Iloilo. No casualties are reported.

Owing to heavy weather the sailing ship *Kamiyoshi Maru* which arrived on Dec. 18th at Osaka bringing coal from Wakamatsu capsized there on the same day. The *Fiji* adds that some junks also capsized at Osaka.

The Nippon Yusen Kaisha's steamer *Mutsu Maru* (915 tons) went ashore on the evening of Dec. 20th off Yanagihara, at the entrance to the port of Aomori. The *Asahi* states that the ship is safe. At the time of the accident a snow storm prevailed and consequently the vessel lost her direction.

Tokyo papers report that the steamer *Denshin Maru* (350 tons) went ashore on the evening of Dec. 21st off the district of Mutsu-kata, Fukuoka prefecture, and immediately sank. The captain and one of the mates were drowned while twenty-eight of the crew and eight passengers were landed. The steamer *Kishin Maru* was sent from Shimonoseki to the scene on the 22nd. The unfortunate ship was owned by M. I. Amasaki of Osaka.

"UNTO US A CHILD IS BORN."

Very still was all the land,
Very secret was the hour;
Darkness as a guide did stand
When the Rose brought forth Her flower—
Rosa sine spina.

Long the road and hard the pain,
Chill and lowly was the shed;
See, upon the straw She's lain—
Straw, to make Her Childs-bed!
Virgo ei Regina.

Cold the welcome, sharp the smart;
God-head treads the bitter way.
Only in the lowly heart
Is Her Babe new-born to-day—
Genetrix Divina!

—EVELYN UNDERHILL

THE LAW COURTS.

THE ALLEGED SILK FRAUDS.

In the Yokohama District Court, on Friday the trial of Mr. Alfred Le Prevost and Mr. Carl Bremer, and three Japanese, was resumed before Presiding Judge Watanabe, and two Associates and Public Procurator Nakamura. Mr. Akiyama and other lawyers employed by the defence were present as usual. The Court sat at 10.15 a.m.

Mr. Yano, for the defence, presented a report of the Chamber of Commerce showing that the price of *usu-kinu* silk was low in June, 1902. The report was put in to answer a statement made by the Public Procurator, in which he suggested that prices were higher at that date.

Mr. Kishi then rose and after thanking the Court on behalf of all the accused and counsel for the attentive and careful manner in which the trial had been conducted, proceeded with a speech for the defence. He said he could not find from the speech of the Public Procurator, any point establishing the charge against the accused. The only tangible thing he could gather was that Bremer carried out transactions as an intermediary between Messrs. Cornes & Co. and Messrs. Fraser, Farley & Co. and on this business he gained a profit of yen 8,000 as commission, and that this so-called commission should be really credited to Messrs. Cornes & Co. if there had not been assistance given by Mr. Le Prevost. This was a simple matter, like many which are always being carried on in business circles. Taking the side of Mr. Le Prevost, it was proved that he was intending to resign from the silk department of Messrs. Cornes & Co. and to enter into partnership with Messrs. Fraser, Farley & Co. Naturally he assisted Mr. Bremer in order to make his own future secure. It had further been conclusively proved that Mr. Le Prevost sold silk goods to Mr. Bremer's firm not at lower rates than the market quotations but rather at higher prices. Messrs. Fraser, Farley & Co. had received many orders from Messrs. Kahn & Kahn, Messrs. Dunlop & Co. and other firms abroad for silk *habutae* which was supplied by Mr. Le Prevost from the goods in the silk department of Messrs. Cornes & Co. Messrs. Cornes & Co. could, of course, not do anything directly with these orders because they had not been given to them. Thus Mr. Bremer purchased goods from Messrs. Cornes & Co. and supplied them to his customers. What was there that could be called guilty in such a manner of business? As stated by Mr. Le Prevost, in 1895 the business of the silk department of Cornes & Co. did not exceed yen 500,000, but after Le Prevost joined them the business gradually grew. In 1900 it amounted to yen 3,000,000, with profits of over yen 62,000, and Mr. Le Prevost opened up further business with many customers abroad. These were really good and meritorious services. Mr. Till, the resident partner, thereupon increased his remuneration by giving him a 5 per cent. commission out of the net profits. Subsequently Mr. Till promised to give Le Prevost one-third of the profits. The late Mr. Till was a generous man, and highly respected in the business community. He was greatly delighted with the services rendered by Mr. Le Prevost and he did his best to forward Mr. Le Prevost's interests. Mr. Till went home and on the way unfortunately died. If Mr. Till had still been living the present case would never have appeared in the Court, so his death might be said to be a cause of the charge. There was no necessity to allow personalities to enter the case, but it was well-known that Mr. Weale did not occupy the respected position that Mr. Till did in men's opinion. Mr. Weale came from the Kobe branch to the Yokohama office, and he commenced his career here by engaging some new clerks from London, intending to let them eventually take the place occupied by Mr. Le Prevost, after they had been well trained. This idea of Mr. Weale's was soon perceived by Mr. Le Prevost and trouble between the parties seems soon to have arisen. With regard to the financial aspect of the case, it is to be noted that the income of Mr. Le Prevost was, in actual fact, better than that of a partner of the firm, because his allowance was one-third of the profits. If he

had become a partner he would have been responsible for the losses. Having well understood the intentions of Mr. Weale, Mr. Le Prevost decided to start in business of his own and thence opened negotiations with Mr. Bremer. But there is no proof that Mr. Le Prevost transferred to Messrs. Fraser, Farley & Co. any of the orders received by the silk department of Cornes & Co. from customers, abroad. Even if there are any defects in the business books, these are not recognized as making a ground for bringing serious charges against him. Before his resignation, Mr. Le Prevost sent some letters containing severe remarks to Mr. Weale who became excited at this attack by Mr. Le Prevost. The idea of Mr. Weale's was well understood to be that he simply intended to keep Mr. Le Prevost in the silk office until the new employees from London became experienced. Thus on Aug. 2nd they entered into a dispute on a business matter after which Mr. Weale seems to have decided to have Mr. Le Prevost brought before the Court. Mr. Weale commenced on August 22nd to examine the books of the silk office; Mr. Le Prevost resigned on June 30th. Subsequently Mr. Weale applied to the Court to seize and examine books on the ground that Mr. Le Prevost had not delivered them back to the head office. Mr. Le Prevost however, drew up a balance sheet on July 7th or 8th and presented it to the head office. In spite of this fact, Mr. Weale employed Mr. Kobayashi Beika to investigate the conduct of the accused. Mr. Kobayashi also employed Nakamura, a detective, to find evidence against him at Fukui, Kawamata, and other districts. Later Mr. Weale informed the Court of a charge of theft and after this laid another charge that the "Piece Goods Delivery Book" had been stolen. The latter information was withdrawn owing to the fact that the book was later found in the office of the silk department. Mr. Weale presented to the Court the supplementary prosecution in October. Mr. Miller was then employed by Messrs. Cornes & Co. to examine the books but his efforts turned out to be worthless. Mr. Miller had been punished by the American Consular Court for committing an extraordinary shameful offence (*jindai naru haren chisai*). He could not therefore be admitted as a witness in a public prosecution in accordance with Japanese law, except for this reason: his punishment had been remitted by the U.S. law by means of a free pardon and so his expert evidence was now accepted in Court. There were many highly respected accountants in Yokohama yet Mr. Miller was specially appointed to examine the important books. Further the letter of Mr. Le Prevost to Messrs. Dent & Co., which did not contain any chargeable passage had been published in the local papers with a certain intention. Now it was seen that Messrs. Weale, de Becker, and Miller had made a "triangular union" (*sankaku domei*) to form a charge against Mr. Le Prevost.

Mr. Kishi then referred to the speech of the Public Procurator and said that Mr. James had sold the name of Messrs. Fraser, Farley & Co. when he intended to occupy a position in the Japan Brewery Co., Ltd. As a matter of fact, Mr. Bremer succeeded to that firm, which had a good customer whose business was estimated at over yen 1,000,000 per annum. Supposing the profit to be at the rate of 1½ per cent., there would be an income of over yen 12,000. For the business between Messrs. Fraser, Farley & Co., and the Silk Department, Mr. Le Prevost employed Yoshida and Sawada as brokers. The only purpose of the accused was to avoid bad feeling on the part of Messrs. Kahn and Kahn who did not care to have the silk goods supplied by Messrs. Cornes & Co. to any other firm in Europe. To use the name of a participating broker was not an unusual course. Messrs. Cornes & Co. had acted in a similar way in other silk and tea business. In the transactions between Messrs. Fraser, Farley & Co. and the silk department of Cornes & Co., Mr. Bremer was paying cash on account of the goods purchased. The commission of *sen 2* per piece paid to the brokers was a very small matter in great transactions. The

accused was engaged in making a telegraph code on the premises of Messrs. Fraser, Farley & Co. as he himself stated at the previous hearing, but that fact formed no basis for any criminal charge. In the absence of Mr. Bremer Mr. Le Prevost had been asked to inspect for Messrs. Fraser, Farley & Co. so that there was necessity to present the "signature-note" to the 100th Bank and the Boyeki Bank in order to enable him to append his signature to documents on behalf of Mr. Bremer. Messrs. Cornes & Co. had suggested to Mr. Le Prevost that the silk department should be closed after he resigned, and Mr. Le Prevost then intended to start business after his resignation. Therefore Mr. Le Prevost naturally transferred some Japanese employees to Messrs. Fraser, Farley & Co. The letter of Mr. Le Prevost to Messrs. Dent & Co. should have no effect on the case. In the letter, he said "I am taking over" etc. but the words did not mean that Mr. Prevost had purchased the firm of Messrs. Fraser, Farley & Co. According to the argument of the Public Procurator it must be written "I took" if he was intending to join with Mr. Bremer. Although Mr. Le Prevost asked in the same letter Messrs. Dent & Co. to keep it secret as he said "I am putting my best men into the firm of Messrs. Fraser, Farley & Co." these matters could never form a basis of punishment. Further, another passage "meantime to inspect the business, etc. of Messrs. Fraser, Farley & Co." had no meaning as touching the present charge. Messrs. Fraser, Farley & Co. had purchased silk goods from people patronized by Messrs. Cornes & Co. at Fukui and Kanazawa as to which transactions Mr. Miller wrote his report in a strange fashion. There was nothing upon which to found a charge, as Mr. Bremer had purchased the goods from the brokers in Fukui. The entries in the books were summarized in the ledger under date of June 30th when a large amount was paid by Mr. Bremer to Cornes & Co. It was in the ordinary way of office work and in some points, the delay in making the entry seemed to be caused by the idleness of Sawada, one of the accused. As a result, it was thought to be suspicious conduct, but the negligence of the Japanese bookkeeper could not form ground for a charge. No invoice was used in the transactions between the silk office and Fraser, Farley & Co. excepting the "Memo of Sale" and the "Debit-Note." These two notes were enough to complete the business between the firms, so that there was no necessity to make invoices as the Public Procurator insisted. Invoices were needed for business when parties lived far apart. There was a defect in the decision of the preliminary examination in that the Court adopted the dates on which Messrs. Fraser, Farley & Co. had shipped the goods, instead of the date when they had purchased them from the silk office. The difference of the dates seemed to have caused some suspicion on the part of the preliminary trial Judge. Mr. Le Prevost had intended to purchase the silk department of Messrs. Cornes & Co. until he received on Aug. 2nd a letter from Mr. Weale cancelling the previous negotiations with reference to the transfer. Counsel further commented upon the report of Mr. Miller and on the interference of Mr. Kobayashi Beika, and stated that the charge against the accused was "jointly compiled" (*gassaka*).

Counsel at the close of his speech gave an explanation with regard to the transactions between the two firms and concluded by insisting, after having cited the law on the question, that the accused should be found not guilty.

Mr. Nagashima, Counsel for Mr. Bremer, contended that his client was not to be drawn into the trouble between Messrs. Weale and Le Prevost. According to the information given by Messrs. Cornes & Co., Mr. Bremer was not connected with the charge, as Mr. Weale knew very well. In order to punish Mr. Le Prevost for apparently defective conduct, Mr. Weale, however, charged Mr. Bremer also as if he had been acting jointly with Mr. Le Prevost, who, as Mr. Kishi insisted, was certainly not guilty. Difference of feeling between Mr. Weale and

Mr. Le Prevost had grown into the present ease. Mr. Le Prevost and Mr. Bremer were not in joint business even though their conduct were judged simply from the moral standard. The records of the preliminary examination showed that there was not sufficient evidence to prove the combination nor did there exist any proof that Mr. Le Prevost had a partnership relation with Mr. Bremer. Mr. Le Prevost was a gentleman to whom Messrs. Cornes & Co. entrusted charge of their silk business. Later a conflict between him and Mr. Weale occurred, on which the accused intended to resign his post and had naturally to contrive some future plan after leaving. As he had testified, his plan was that of constituting a syndicate with which purpose he had placed his views before Mr. Bremer. Mr. Bremer was the son of a well-known and wealthy banker at Bremen. Their negotiations were understood to be that Mr. Le Prevost had asked Mr. Bremer to find how much capital would be needed for the proposed syndicate or for the business of Messrs. Fraser, Farley & Co. If in the latter case Mr. Le Prevost was to attend to the actual business and Mr. Bremer was simply to occupy the position of capitalist. This plan had not been matured when the prosecution was instituted. A most unfavourable statement was given by T. Uyeno, as a witness in the proceedings of the preliminary trial, to the effect that Messrs. Le Prevost and Bremer were actually working in the office of Messrs. Fraser, Farley & Co. as if they were partners. But according to the statement of Okazawa and two other Japanese accused Mr. Le Prevost was assisting the business of Mr. Bremer who was occasionally absent but that the latter was, however, in charge of the firm. Mr. Bremer stated in the preliminary examination that Messrs. Kahn had given an order for silk goods to him through Mr. Le Prevost who was intending to resign from Messrs. Cornes & Co. at that time and who was planning the forming of a syndicate, and that Mr. Bremer at one time thought of employing Mr. Le Prevost on a salary in order to continue the silk business. Mr. Bremer never thought of being connected with the charge under the forty-one items as enumerated by the Public Procurator, but on the contrary lost yen 8,000 in the transactions. Counsel finally asked the Court to acquit his client of the charges.

Mr. T. Hanai, Counsel for T. Sawada, one of the Japanese accused, was also heard in support of his client.

Mr. Takagi, in defence of Mr. Bremer, dwelt at some length on technical points and concluded that the action of Mr. Bremer did not constitute an offence in law.

Mr. Ohashi, in defence of Mr. Nishida, stated that the accused had no knowledge of the names of Yoshikawa and Sawada having been inserted in the firm books, as his duty was confined to godown work and there was no evidence showing that he had received any share of profits as the Public Procurator insisted.

Mr. Shinoda, in defence of Okazawa, contended that the prosecution was not sustained, and therefore the accused must also be acquitted of the charge.

Mr. Akiyama, counsel in defence both for Mr. Le Prevost and Mr. Bremer, summarizing briefly the evidence adduced in the Court, stated that Mr. Le Prevost was appointed to take charge of the silk business of Messrs. Cornes & Co. and his valuable services were fully recognized by the late Mr. Till, who made an effort to have him admitted as a partner of that firm. The death of Mr. Till destroyed the prospects of Mr. Le Prevost being admitted to the partnership, as Mr. Weale, who removed from the Kobe branch after the death of Mr. Till, obstinately opposed Mr. Le Prevost. Counsel at some length spoke on lines similar to those of Mr. Kishi with reference to the relations between Mr. Weale and Mr. Le Prevost, after which he said that the arrangement was suddenly altered, and Mr. Weale filed an application for the preservation of evidence, and then the action was filed. The prosecution comprised several charges such as fraud, embezzlement, theft, etc. Some of the charges were withdrawn and new charges entered

in the course of the prosecution. It appeared, therefore the prosecution was not based on the facts, but rather the prosecution itself gave rise to the facts. After a most scrupulous investigation, Mr. Bremer was summoned and his evidence was taken advantage of to bring a prosecution for fraud against him, on the ground that he obtained a share of the profits arising from the forty-one transactions enumerated by the Public Procurator. Mr. Weale seemed to have found it necessary to involve Mr. Bremer in the charge, simply because he wished to incriminate Mr. Le Prevost. According to the prosecution, Mr. Le Prevost and Mr. Bremer purchased jointly the firm of Messrs. Fraser, Farley & Co. and carried on business. This seemed to be the basis of the present case. If the basis insisted on by the Public Procurator was removed the case was accordingly put out of existence. As all the accused—Mr. Le Prevost and Mr. Bremer—stated in the open trial, Mr. Bremer purchased alone the firm of Messrs. Fraser, Farley & Co. and started his own business, supplying silk goods to his customers abroad, some of the merchandise being bought from Messrs. Cornes & Co. As a fact it was known that Mr. Le Prevost assisted Mr. Bremer and while in the service of Messrs. Cornes removed some Japanese employees of Messrs. Cornes to Messrs. Fraser, Farley and Co. Such action was usual in business circles and it could not be said to make a basis of such serious charges. After commenting on the various evidence against Mr. Le Prevost and Mr. Bremer, Counsel discussed the penal law and held the conduct of the accused was not to be touched by the provisions of Art. No. 395 of the Code, to which the Public Procurator referred.

Mr. Uzawa, Counsel for the defence, on behalf of Mr. Le Prevost and Mr. Bremer, cited various cases with regard to fraud, and urged that all the accused must be acquitted.

Mr. Ideura, Counsel for Mr. Bremer, spoke at some length, his arguments principally dealing with the law on the subject. He also contended that the accused must be released from the charge.

Mr. Yano, Counsel employed for all the accused, said he had nothing to offer after his colleagues had disclosed their detailed arguments. He simply asked the Court to acquit the accused.

In the criminal case in which Messrs. A. Le Prevost, Carl Bremer, and three Japanese were involved on a charge of fraudulent transactions in silk, sentence was given on December 23rd, in the Yokohama District Court. The accused were acquitted.

The official translation of the judgment is as follows:—

JUDGMENT.

Alfred Le Prevost, British subject, aged 39 years, Silk Merchant, No. 87, Yamashita-cho, Yokohama, accused.

Carl Bremer, German subject, aged 37 years, Silk and Import Merchant, accused.

Sawada Tokutaro, aged 32 years, Employee of a foreign firm, No. 962, Nishi Tobecho, Yokohama, accused.

Nishida Yoshikata, aged 33 years, Employee of a foreign firm, No. 41, Suyeyoshicho San-chome, Yokohama, accused.

Okazawa Kokichi, aged 32 years, Employee of a foreign firm, No. 34, Miyagawacho, Yokohama, accused.

Judgment is hereby given as follows in the case in which the above five accused have been charged with having obtained by fraud entrusted goods:

REASONS.

The facts embodied in the indictment are as follows.

The accused Alfred Le Prevost was engaged by a joint-name Company, Cornes & Co., of No. 50, Yamashitacho, Yokohama, import and export merchants, on the 1st of June, 1898 and was appointed as head of the Silk Department of the Company at No. 48 B, Yamashitacho, and he was in charge of buying and exporting habutai and other

silk goods and manufacturing handkerchiefs. The Company reposed confidence in Le Prevost, one of the accused, and not only all matters relating to the business of the Silk Department but also the appointment and removal of the members of the firm other than foreigners were left to him. Thereupon the accused abused the confidence of the Company and attempted to make illicit gain by dishonestly disposing of the goods of the Company and in complicity with the accused Bremer, and Sawada, Nishida and Okazawa, employees of the Company. The trade-name of Fraser, Farley & Co., silk exporters of No. 270, Yamashitacho was bought in the name of Bremer in November, 1900. The silk export business was then started on joint account by Le Prevost and Bremer. Both were concerned in the business and Nishida first of all resigned his post in Cornes' and entered Fraser, Farley & Co. Okazawa next joined the latter firm and in this way the majority of Cornes' employees were induced to remove to Fraser, Farley & Co. Sawada remaining in Cornes' place and exclusively engaged in keeping books and in transacting financial matters. Thus arranged, more than 2,000 pieces of silk goods belonging to Cornes & Co. were, from Nov. 28th, 1900 up to July 25th, 1901, taken out on 41 separate occasions from the godown of the Silk Department of the Company and sold and exported in the name of Fraser, Farley & Co. or Carl Bremer to the customers in this and other countries and fictitious entries were made in Cornes' books as if the goods were sold to Sawada Gitaro of Kitanakadori and Yoshihara Eizaburo of Aioicho, brokers, thus making dishonest gains.

The above facts, however, are not established by sufficient evidence.

Under these circumstances, the offence should be dealt with according to the first part of Art. 224 of the Code of Criminal Procedure and as to the goods taken, Art. 202 of the same Code should be applied.

In accordance with above reasons judgment is delivered as follows:

FORMAL ADJUDICATION.

The accused Alfred Le Prevost, Carl Bremer, Sawada Tokutaro, Nishida Yoshikata, and Okazawa Kokichi are all not guilty of the crime charged against them.

The goods taken by the Court will be returned to the respective persons who have produced them.

The Public Procurators concerned in this case are Nakamura Takezo and Mizutani Seigoro, Public Procurators of this Court.

Given by the First Criminal Division of the Yokohama Chihō Saibansho this 23rd of December, 1902.

WATANABE NOBU,
Judge President.
MATSUYAMA KYUTA,
Judge.
NAGOYA UMESABURO,
Judge.
YOSHIDA GIRO,
Clerk of the Court.

THE HORSE CASE.

Judgment was delivered on Dec. 21st in the Yokohama District Court, before Judge Kato, in the case brought by Mr. Geo. Booth against Messrs. Durand, Cobb and Co. petitioning for repayment of the price of a horse, the left hind of which was found to have a crack after it was purchased from the defendants. Mr. Booth's claim was rejected and he was ordered to bear costs.

AN INSURANCE CLAIM.

In the Yokohama District Court, before Judge Kato, judgment was delivered on Dec. 23rd in the case in which Lin Peh Seng, a Chinaman, claimed yen 5,421.10 from the Norwich Union Fire Insurance Society of Norwich and London. The claim of plaintiff was rejected with costs.

FIRES.

SERIOUS FIRE IN YOKOHAMA.

Fire broke out on Saturday (the 16th) at 11.10 a.m., originating either in a dressing room or in the bath-room of the Hagoromo theatre, near Isezakicho, Yokohama. Unfortunately, a strong westerly wind was blowing and in consequence the flames spread very fast to the surrounding buildings, with the result that about 140 houses—55 in Hagoromo-cho, and 85 in Horai-cho—were destroyed, and some 10 buildings were injured. The cause is not known, but the Isezakicho police believe it to be negligence on the part of an attendant. The performance in the theatre had not been long in progress and the audience was not large, so that everybody was able to escape from the building. Only the presence of the Ōka-gawa creek stopped the onward progress of the flames, though the fire brigades did much service in keeping them within bounds in other directions.

About the same time two fires took place in Tokyo, one at Chita-cho, Fukagawa, burning down a building. Another occurred at Higashi-Naka-cho. In both instances the cause is reported to be tobacco ashes.

Early on the morning of the same day, fire was reported at Nikko, destroying 20 dwellings, 7 godowns and 2 telegraph poles.

On the night of Friday, two fires broke out, one at Sano and another in the district of Hakata, Shizuoka prefecture, burning down 14 and 44 houses respectively.

A fatal fire occurred on Dec. 19th at the factory of the Sanshō-sha Match Manufacturing Company, Koto-cho, Kobe, burning down the building. Four workmen were killed and five others severely injured. The cause is reported to be due to inflammable materials which were set on fire by tobacco ashes.

A telegram from Shimonoseki states that a godown of the Kyushū Railway Company was destroyed by fire which occurred on the night of Dec. 17th. The damage is estimated at yen 20,000.

As already reported, fire broke out at the Sanseishi match factory, Kotonochō, Gochōme, Kobe at 7.30 on the morning of Dec. 19th. The whole premises, according to the *Kobe Herald*, were destroyed in about an hour. Two girls, named Waku Mine and Shiba Sada, aged 19 and 16, were burnt to death, while ten others were badly injured. The latter were sent to the Sano Hospital for medical treatment immediately. The girls were warming themselves in a room next to the part of the building where the fire originated, and two cases of chemicals, placed near the only doorway to the room, soon caught fire, with the result that the unfortunate girls were unable to escape. By the time the fire brigade arrived, the whole building was ablaze, and the girls, shut inside, were piteously crying for help. A passage was forced through a wall and all twelve girls were pulled out; but two quickly succumbed to their injuries. The cause of fire is reported to have been an accident in the drying room. The premises were insured by the Tokyo Fire Insurance Co.; but the amount is not yet made public.

A telegram from Tsu, Ise province, states that fire occurred on the night of Dec. 20th in that city burning down 55 houses.

The well-known Buddhist temple of Manshōji, in Horii-cho, Wakayama, has been destroyed by fire, which broke out on the night of Dec. 20th. The damage is estimated at yen 25,000. The cause of the accident is not yet reported.

Another outbreak took place on Dec. 20th at the village of Kumi, near Shizuoka, destroying 17 buildings which comprised 50 dwellings.

On the night of Dec. 19th, an incendiary was arrested by the Isezaki-cho police in the act of setting fire to a house in Suruga-cho.

CHRISTMAS.

So now is come our joyfulst feast;

Let every man be jolly;

Each room with ivy leaves is drest,

And every post with holly.

Though some churls at our mirth repine,

Round your foreheads garlands twine,

And let us all be merry.

Now all our neighbours chimneys smoke,

And Christmas blocks are burning;

Their ovens they with baked meats choke,

And all their spits are turning,

Without the door let sorrow lie,

And if for cold it has to die,

We'll bury't in a Christmas Pie,

And evermore be merry.

—GEO. WITHER (17th Century).

KOBE ADVISORY COMMITTEE.

At the annual meeting of Kobe residents called by the Kobe Advisory Committee on Dec. 18th, Mr. H. Pitteri, having been renominated and being the only candidate, was re-elected a member of the Committee. In the report of the Chairman of the Committee (Mr. E. H. Gill)—reference was made to the state of the cemetery, which appears to be far from satisfactory. What the Advisory Committee would like to do in the matter is indicated by Mr. Gill thus:—

The Committee thought it well to make the suggestion, in which I am sure they will have the full support of this community, that the upkeep and care of the cemetery should be placed in the hands of the Advisory Committee. Of course the Committee does not seek to obtain powers to deal with the allocation of lots for burial purposes, nor does it desire to interfere in any way with the control exercised by the local authorities. The Committee merely suggests that it should be given authority to see to the proper formation of the paths and the care of the trees which have been planted there with the object of beautifying the place. The funds for this purpose would come from those already raised by the Committee from among Foreign Residents, and we feel convinced that the community would support any efforts made in this direction. I may say that this suggestion has been conveyed to the Consuls, who, I understand, regard it favourably.

The report also stated that the authorities had promised to improve the communication between the road running along the north end of the former settlement, known as Ura-machi, and the broad road running east of the cricket ground to Ono. Reference was made to improvements at the American hatoba and to the necessity of extending that structure. The report mentioned in congratulatory terms the recognition that the Committee on special occasions at the naval review and at the Himeji military review had received from the authorities. Some discussion took place, chiefly about the hatoba, which several speakers declared to be a disgrace to the community, and about the cemetery as to which nearly similar views were expressed. The accounts showed a balance of yen 306.00.

LITERARY GOSSIP.

Mr. Murray has in preparation, in two or more volumes, "The Letters of Queen Victoria:—A Selection from Her Majesty's Correspondence between the years 1837-1861."

Dr. William W. Ireland, Musselburgh, has been engaged for about two years on a life of Sir Henry Vane and the Republicans of the Commonwealth. The work is now approaching completion.

At the time of his death Sir Walter Besant was engaged on what he called his magnum opus, "The Survey of London." The first instalment, "London in the Eighteenth Century," was published last year, and Messrs. A. & C. Black have now got the second instalment, "London in the Time of the Stuarts," almost ready for publication.

Mr. Crockett's new book, "The Adventurer in Spain" will be published by Messrs. Isbister. The adventurer in Spain is Mr. Crockett himself, for many of the incidents that he records occurred

during his recent tour in that country. Mr. Gordon Browne provides some drawings, and Mr. Crockett a long series of photographs which he took during his wanderings.

The number of book publishers has doubled in Paris since 1870; there are now more than 200, who issue about twenty new books on the average every day in the year. French publishers are at present complaining that the sales of novels show a steady decline and they put it down to the over-production of mediocre work all harping on the same string.

Mr. V. Chirol, foreign editor of *The Times*, has expanded his series of letters on the Middle Eastern Question, written last cold weather during his visit to Persia and India, into a book of some 600 pages. This will be published in London immediately and will contain maps and illustrations, not to mention a copious index in which much valuable information will be given bearing upon Persia's relations with European Powers. Mr. Chirol, who is one of the few experts upon the Persian Question, has brought all his facts up to date, and he will be found a safe guide to follow by everyone interested in the great problems which have come to the front in the Middle East during the last three of four years.

There is one point in the policy of Pope Pius X. which historical students throughout the world will learn with interest. It may be expressed in the one word, freedom of research. Leo XIII. conferred upon science a great benefit in reversing the policy of Pius IX. and throwing open the incomparable treasures of the Vatican archives to all of competent status, regardless of nationality or religion. Some anxiety has been felt in Europe as to whether this enlightened policy would be continued, and the Pope, the other day, in receiving Dr. Pastor, who presented a copy of his great "History of the Popes," affirmed his purpose of continuing to grant free access to all documents in the archives.

"The Cardinal's Snuff-Box," when it appeared two or three years ago, was hailed as Mr. Henry Harland's masterpiece. Critics of authority described it as a book among a thousand, as a charming romance, as a love story that was at once beautiful, delightful, and a work of art. And the public soon declared themselves of the same mind, for "The Cardinal's Snuff-Box" was bought by tens of thousands: when last we heard of it, the editions run through brought its circulation up to about ninety thousand copies. Mr. John Lane has now issued another edition—an edition de luxe, evidently with an eye to Christmas; for it makes a very desirable gift-book. Mr. G. C. Wilmshurst has been entrusted with the illustrations, and he has produced a score of dainty, spirited, and artistic pictures, which, with fine paper and printing, and an ornamented cover, make a book that would look in its right place in "my lady's boudoir." The volume is sold at six shillings.

Miss Horace Smith, who died in her house at Brighton but the other day, and could remember the times of Princess Charlotte of Wales, once told me a story, writes Mrs. Richmond Ritchie in the *Cornhill Magazine*. It was long and complicated. It concerned a family living in Brighton, somewhere near Kemp Town. There was a somewhat autocratic father and a romantic young son, who had lost his heart to the housemaid and determined to marry her. The father made the young man give his word of honour that he would not marry clandestinely, and then, having dismissed him, rang the bell for the butler. To the butler this Major Pendennis said, "Morgan" (or whatever his name was). "I wish you to retire from my service, but I will give you £200 in bank notes if you will marry the housemaid before twelve o'clock to-morrow." The butler said, "Certainly, sir," and the young man next morning was told of that which had occurred. As far as I remember, a melancholy and sensational event immediately followed; for the poor young fellow was so overwhelmed that he rushed out and distractedly blew his brains out on the Downs behind the house, and the butler, meanwhile having changed his £200, sent a message to say that he

had omitted to mention that he had a wife already, and that this would doubtless invalidate the ceremony he had just gone through with the housemaid.

Many references have been made to the late Mr. Lecky as a historian and prose-writer. Much less has been said of his work as a poet. Some twelve years ago he published a little volume of poems, written, as the dedication to his wife tells us, "in many years and in many moods." This volume (says the *Westminster Gazette*) entitles Mr. Lecky to an honourable place among the minor poets, at all events, for it contains verses possessing true poetic feeling, and there are to be found frequently in it passages of considerable grace and beauty. Several of the pieces are believed to show marks of the spiritual conflict through which their author passed. The following lines have been applied to Mr. Lecky himself:—

He found his work, but far behind
Lay something that he could not find—
Deep springs of passion that can make
A life sublime for others' sake,
And led to work the living glow
That saints and bards and heroes know.
The power lay there—unfolded power—
A bud that never bloomed a flower;
For half beliefs and faded moods
Of windings, critics, cynics, prudes,
Lay round his path and dimmed and chilled.
Illusions past. High hopes were killed;
But duty lived. He sought not far
The "might be" in the things that are;
His ear caught no celestial strain;
He dreamt of no millennial reign.
Brave, true, unhoping, calm, austere,
He laboured in a narrow sphere,
And found in work his spirit needs—
The last, if not the best of creeds.

It must be promptly conceded that the greatest living forces in literature are to be found outside the English race. If the consensus of educated literary opinion could be taken (says Mr. Hamilton W. Mabie), it would probably give Tolstoy the first place among living writers. A man of deep convictions, who lives like a peasant; a teacher of peace in one of the most thoroughly armed countries in Europe; a preacher of primitive social and religious ideas under the most absolute of monarchies; too eminent and too influential to be silenced or banished, Tolstoy is a unique personality. As a writer he has qualities of the highest order—power of invention on a great scale, force of imagination sufficient to float immense masses of fact, sustained energy of style sufficient to give his greater stories a kind of epical magnitude and impressiveness. Of these stories "War and Peace" produces the effect of a vast panorama of national and individual experience and action. Its real hero is the Russian people, and its central idea is the ultimate sovereignty of the people rather than of the man of genius even where he commands the resources of a Napoleon. In "Anna Karenina" Tolstoy gave the world one of its greatest modern novels: a story too frankly written for the traditions and tastes of most readers, but one of the most impressive moral dramas in the whole range of fiction; a novel which deals with a sin of passion in the spirit, and does it with the terrible plainness of some of the Old Testament stories.

CUSTOMS APPEALS.

Baron Sone, Minister for Finance, gave a decision on Dec. 18th on an appeal filed by Messrs. Worch & Co., No. 154, Yokohama, against a decision given by the Yokohama Customs. According to the *Official Gazette*, the firm imported on Sept. 12th twenty-six cases of printing paper, with certificate of origin, on which the Customs imposed 10 per cent. *ad valorem* duty in accordance with No. 293 of the general statutory tariff on which the importers paid the necessary amount. The importers contended that the duty should be under No. 292 of the same tariff and claimed the return of yen 66.72 as the difference between the rate of No. 292 and the amount that had been paid under No. 293. The protest was rejected on the ground that the goods in dispute were not printing paper but name cards.

PEACE AND GOOD-WILL.

Unto our hearts, draw nearer!
Draw nearer, O Spirit of Peace!—
For life is so dreary; love is so weary;
And woes of the world never cease.
Laughter may mock, while the lips grow cold;
Tears may brew'neath a cross of gold;
Oh unto our hearts, be nearer and dearer,
With Peace and Goodwill as of old.
Many a bosom is aching;
And Joy makes us sorrow the more
For some tenderest one—some face that is gone—
Some smile that ne'er beams thro' the door;
For the gentle tone of a glad voice;
A footstep heard that bids rejoice:
But now the heart is aching and breaking;
And Grief knows no solace or choice.
Oh for a season of sweetness,
Gleaned back from the pitiless past;
A smile and a tear, a hope and a fear:
Endearments that vainly would last!
Yet love and life are crushed in an hour,
As the foeman Death stalks forth to devour
Our love with its sweetness, life with its fleetness;
Our bliss with its passion and power.
Spirit of Peace, draw nearer!
Oh give us a respite of joy!
Let us forget the sun that is set,
And the darkness that comes to destroy.
Over our hearths and homes preside
Fond and faithful this Christmastide;
With Peace still nearer, and Goodwill dearer,—
O Spirit,—forever abide!

—FREDERIC IRVING TAYLOR.

NEWS OF THE WEEK.

Sir Frank Swettenham is resigning the Governorship of the Straits Settlements on the 12th January next.

Owing to a heavy snow storm which has prevailed since Dec. 18th traffic on the Gan-Etsu railway is suspended.

The *Asahi* states that the Mitsui Bussan Kaisha's steamer *Manda Maru* has been chartered by the Government. She is now lying at Nagasaki.

The new editor of the *Penang Gazette*, in succession to Mr. E. F. Skerretchly, formerly editor of the *Hongkong Telegraph*, is Mr. S. C. Penny, who arrived at Penang a few days ago from Europe.

A strong draft of the Sherwood Foresters left Parkhurst, England, on December 7th en route for Hongkong. They were unaccompanied by their wives and families, which is significant, says the *Daily Press*.

The project which Marconi has in contemplation of joining India and Italy by wireless telegraphy will not be started upon until after completion of the Italy and South America scheme. Bombay will probably be the receiving station.

The battleship *Glory* arrived at Mirs Bay on Monday morning last from Japan, said the *S.C. Morning Post* of Dec. 11th. She then proceeded to Tytam Bay to run her "paying-off trial" and on the measured mile made the excellent speed of 18 knots. The *Glory* was built to run 18.25 knots. The *Glory* will shortly pay-off and her crew will proceed home in the *King Alfred*, a cruiser of the *Leviathan* class. The *King Alfred*, is to commission on the 22nd inst., and will probably arrive about the first week in February. The *Glory* will be docked and over-hauled in the Hongkong and Whampoa Docks and preparations are now being made to receive her. She will be the largest vessel ever docked in Hongkong.

The efforts of Captain Dreyfus to secure the judicial re-examination of his case, have at last been crowned with success, said a Paris telegram of Nov. 28. After examining the dossier in the case submitted to him by General André, the Minister of War, Minister of Justice Valle has

transmitted that document, together with the petition of M. Dreyfus for a revision of his sentence, to M. Durand, the President of the Commission instituted by the Minister of Justice. This Commission will pronounce upon the admissibility of the request for a revision of sentence. Nothing has, as yet, transpired to indicate that General André has discovered documents of doubtful authenticity, or that there was manoeuvring on the part of the Ministry of War during the Dreyfus trial to create important facts, though assertions to this effect have been made. M. Dreyfus, in the course of an interview the same evening, expressed happiness because a revision of his case had been granted, but declined to make any statement.

A rather interesting criminal case is being tried in the Tokyo District Court before Presiding Judge Imamura and Public Prosecutor Hazama, the defendant being Mr. Hamaguchi, a Buddhist priest belonging to the Shingon section, who is charged with a contravention of the regulations as to medical practitioners. According to the prosecution, the accused engaged publicly in surgical work on the pretext that he could apply the efficacy of the Buddhist faith. The trial was resumed on Dec. 21st, when Mr. Hayashi Yama, a prominent politician in Tokyo, and younger brother of Baron Iwamura, was examined as a witness. He stated to the Court that he met the accused first in December last at the residence of his brother when he was spoken to about the subject of faith and was requested to make a trial in the removal of a wart from his face. Later the witness asked the accused to operate upon him and the work was successfully performed, the priest putting one of his fingers on the wart and praying. The Court asked whether the accused had used any kind of medicine on the finger, or whether blood came after the wart was removed. The reply was that no medicine was used and only a very little blood appeared and that there was no pain. Tokyo papers agree in saying that Mr. Hayashi has given a strong testimonial in favour of the accused.

POLITICS, LITERATURE AND THEOLOGY IN NEW YORK.

New York City, Nov. 3, 1903.
Great Gotham is to enjoy a Sabbath in things commercial to-day. The hotels are as quiet as church aisles. The shops and stores are closed, the trolleys and waggon wheels do not turn. Even the Subway blastings and rivetings of "structural steel" have ceased their thunder and din. Only at the public there seen any concentration of men, even the bars and beer saloons are tight shut. To-night the crowds will gather in mighty masses to read the election returns by lime-light, or in the arched beams, cast the length and breadth of Manhattan island from lofty towers, discern the victory of Lee or McClellan. The city, now plastered with election posters and exhortations to vote aright, will soon be relieved of its extra bunting, swinging banners, mid-air advertising, and board-fence literature. By November 4th the conflict of the Tammany Tiger and the Republican Elephant will have passed into history. At the headquarters on Broadway a full grown Bengal, or Korean, tiger paces up and down, behind steel and plate glass, the inquiry printed in huge letters, being, "Will you turn him loose again?"

It is Republican weather. Indian summer's balmy air and cloudless skies make the Democrats sorrowful. Tammany Hall and the Democrats always hope for rain, storm, mud and bad roads. The worse for the former, owner of harness and waggons dweller in comfort, who might damage property or lose time in traversing storm-drenched roads; the better for the Democrats, whose strength is in the large cities where pavements make movement easy. On the contrary, the State, in the counties and in the farming regions, is Republican.

Awaiting until to-morrow the results for which the practical man toils, let us look at the fruits of the idealists, to whom the affairs of days or months are of less importance than the general trend of things. The publishers have held in leash their choicest books, and patiently await the passing of the state and city elections. Their lists seem to be rather larger than in 1902, and there seems to be a greater variety in all lines of literary enterprise and publishing ventures. While the East or Atlantic coast is still the place of large editions, yet in Cincinnati, Chicago, St. Louis, San Francisco, and other western

cities the number of books published shows a steady increase year by year.

Among the books on Japan already on the reviewer's tables, Gulick's "Evolution of the Japanese" is easily first in seriousness and importance. "Onoto Watanna" has a dainty story, as light as a bubble, and as pretty as prismatic. "The Heart of Hyacinth." The scene is located at Sendai, and all is new Japan, for we have not only missionaries, but even two generations of them. There is not only a Eurasian educated in England, but also the child of an American lady who is reared a *la japonaise*, and (like one of my acquaintances, a Presbyterian minister, who, until he was fifteen years old, thought himself an Apache Indian) comes to consciousness of her real racial inheritance after various adventures. In its dress of violet and white, with text printed on paper artistically treated with designs by a Japanese artist, the book makes a dainty gift. By the way, I hear that "Onoto Watanna" is staging a play of her own, of Japanese motive, and is now rehearsing it in New York. Meanwhile, despite the alleged slump in theatrical prosperity, the play-houses are in full blast and "the Darling of the Gods" is still running. The playwright and novelist, John Luther Long, besides a volume of stories, two or three of which picture Japanese life, reissues his "Madame Butterfly" in a luxurious edition with superb illustrations. I have read his sufficiently interesting preface, in which he answers the numerous naval officers and tourists who in savage letters to him declare, each one of them, that they are not, actually in whole, or ideally in part, the male hero of the story. Mr. Sadakichi Hartmann has written rapidly, carelessly (as to spelling and proof-reading at least) but most interestingly a handy book on Japanese art. For one dollar and with an hour or two of time, the average man may get herein a good glance at the artistic history of the Japanese.

Query. How much more literature are we to get from half-blooded Japanese, and what will be its quality?

A really valuable work for the busy man, either in Japan or in English-speaking countries, is Professor Ernest Clement's "Handbook of Japan." It is exactly what it professes to be, and is rich in tables, statistics, index, and notes, besides twenty chapters which discuss clearly and accurately political, historical, artistic, religious and commercial Japan. The text is very readable and the bibliography under each chapter is very full. The tone is that of the modest scholar with judicial breadth and poise of mind. It is a model.

Captain Brinkley's "Oriental Series" continues to be the theme of praise and the favourite in libraries patronized by the critical. It is a wonderful mine of scholarship and its artistic mounting makes it the delight of the aesthetic.

"The Mikado's Empire," now in its tenth edition, brings down the history of the empire to the end of 1903. In two volumes and now without appendices, the author has not attempted to rewrite the book except in the matter of preface and explanation. He has begun the preparation of a Handbook for the study of Japan by classes interested in missionary work and history. In line with the previous volumes, which started and continued with Latin titles, this one on Japan will be named "Flores Christi." The widespread study of Christian missionary history, work and problems by classes in schools, churches, colleges and universities, and the great interest in the subject are among the most notable signs of the times. In our days, much of what was once of purely ecclesiastical interest is now part of the life of educational and sociological procedure.

The mutual influence of the Orient and Occident upon each other is visible in many signs. The addresses this year before the meeting of the American Board of Commissioners for Foreign Missions at Manchester, N.H., were notable for their frank and full recognition of the reality and power of the ethnic and continental religions of Asia and the common truths underlying all genuine religions. Addresses like those of Dr. Charles Cuthbert Hall, Dr. J. H. De Forest of Sendai, and President W. J. Tucker of Dartmouth, could not only not have been heard a decade ago, but it is doubtful whether they would have been tolerated. Surely a more earnest study of religion makes men more brotherly, increases mutual understanding, compels the Christian to know better his own religion, fills him with warmer love to his fellows and more zeal for their uplifting. "Religions are many; religion is one," is the motto of the New York State Conference (not of religions but of noted, but of Religion), which meets in Ithaca on November 12 and 13. All denominations of Christians are represented, as individuals, in it. Its object is to promote practical, not theoretical religion; in other words, to secure the enforcement of the Ten Commandments in spirit and letter.

One sign of the coming reconciliation of the Oriental and Occidental mind, and the breaking down of the middle wall of partition, is the publication of Professor Doctor George William Knox's book

entitled "The Direct and Fundamental Proofs of the Christian Religion." The title is from Butler. This, I venture to believe, is one of the great books of our decade, and may be an epoch-maker, if not epoch-maker. The author was about fifteen years in Japan, as missionary and teacher of theology, and a fruitful member of the Asiatic Society. Dr. Knox frankly accepts the modern view of the universe. Butler, Paley, the old apologists, are to him as good as defunct, for they and their opponents stood on the same ground in a similar view of the universe. Dr. Knox frankly recognizes that Buddhism, Islam, etc., are real though very limited religions. He first states the classic argument for the Christian evidences, and then presents the modern view of the world which compels a new apologetics. He discerns between reality and proof, shows what religion is; its definition, development, varieties, conflicts and proofs. In masterly style and with forceful freshness he instances and exploits the conflict of religions, Buddhism and Confucianism, in China, Korea and Japan. He then shows what the Christian religion is, both as ethics and religion proper, its conflicts and its proofs. His conclusion is that Christianity is the absolute religion nevertheless.

The Christianity that accepts the modern view of the universe, and which calls for new apologetics, proofs and systematic theology, is not that mixture of Greek philosophy, Roman discipline and Protestant tradition, which now in the popular view passes for the truth of Jesus. In a forcible sermon before Cornell University on Sunday morning, October 11, Dr. Knox made very clear the difference between pure and primitive Christianity and the various ecclesiastical products so plausibly manufactured. He discerned between that which says "Lord, Lord," and that which is of Christ and does like Him.

"Will the contact of the Orient with the Occident modify our Christian religion?" asked one of the editors of the *Outlook* of the writer yesterday.

"Profoundly," was the answer. "The effect will be far reaching. Much of our form, tradition, Christian theology, so-called, and popularly held to be such, must pass away. The West will give to Asia the idea of personality. The East will elaborate and perfect the doctrine of the Holy Spirit. Both will learn from each other to the glory of the Father."

The old heavens and old earth of past tradition will pass away, but Christ's words—not even a jot or tittle of them—will pass away. He is still Lord of the centuries, and to what he taught of life and religion, have added nothing. The time is coming when Christians will actually, even as they now sing, "Crown Him Lord of all."

W. E. G.

RUSSIAN AFFAIRS.

Port Arthur, December 1.

The situation here remains unchanged. The fleet is here, ready, waiting; and ever since the arrival of the 27th and 28th East Siberian Regiments, which I spoke of in my last letter, the preparations of the military (preparations carried out, I daresay, more with an eye to a certain winter than an uncertain war) go on briskly. The same cannot be said, I am afraid, of the negotiations in Tokyo but, in case these negotiations break down, it can hardly be said that Japan would be in a better position to fight than she was a month ago. At any rate this is an ominous season in which to wage war with Russia. In November, 1480, the Tartars were vanquished by the terrible Russian winter and their domination passed away forever; on 26th November, 1812, commenced the terrible passage of the Beresina.

At the time of writing, snow covers all the landscape; the cutting north-east wind which will continue blowing till next March would alone make the landing of a large force at an exposed and out-of-the-way point along this bleak coast a difficult matter. I think I may safely venture to prophesy that there will be no trouble here until next Spring at any rate.

Japan may feel easy, however, on the point. There is no combination against her as there was in 1896. The *Novi Krai* reassures her on this point. "The Japanese Press," it says, "seems to be uneasy lest she be confronted by the triple combination of Russia, France, and Germany which opposed her in 1895. . . . In the disordered imagination of the Japanese, the slightest cloud on the political horizon takes the form of a coalition of the Europeans against the seizure by the Japanese of Korea."

"But what mistakes the Japanese Press sometimes falls into! In the present instance, the fact of the matter is that a union with Germany for common action in the Far East would be anything but advantageous for Russia. It seems to us to be very probable that the change which has already taken place in international politics in the Near East will extend to the Far East, but it will not consist in Germany drawing closer to France and Russia. It must not be forgotten that the Near and Far East have a common connection. A rapprochement between Russia and Germany for action in the Near

and Far East would only be to the detriment of England as the Japanese papers point out, but the interests of the Russian and British Governments now coincide on many points not only in the Far East but also in the Near East, as we have already pointed out more than once. Far-seeing statesmen understand this but unfortunately the masses have not been sufficiently enlightened on this subject.

"In order, therefore, to throw light on this question as far as possible and at the same time to show the Japanese Press the groundlessness of its alarm, we shall permit ourselves to say a few words about the colonial policy which Germany has pursued of late years in the Near East." The Port Arthur paper then points out how Germany has gone rather against Russia in the matter of the Bagdad railway and seems to think that a Russo-Franco-German combination against Japan is not likely to take place in the near future.

The *Novi Krai* has published a series of articles from one of its staff who has lately been all through Manchuria making investigations. In these articles a bad account is given of the state of things along the railway line, especially in the Chinese town of Harbin, where Russian Jews are accused of first pandering to every depraved taste of some passengers and then fleeing the latter unmercifully. It is suggested that order be maintained by gendarmes placed under the direct control of the Viceroy and having no connection with the railway company.

Port Arthur, December 6.

The recent slight display of anti-Russian activity on the part of China is exciting some anxiety here, the reports that have come to hand lately of the movements of the Chinese troops in the south of Manchuria being of a nature to cause alarm. These rumours have not yet been fully confirmed, but, on the other hand, it is a fact that the Russian Military Club at Harbin was burnt to the ground on the night of 1st December.

Another fracas seems to have occurred in Chemulpo and two Russian warships have been dispatched from Port Arthur to that port. No news as to the nature of the affray has as yet leaked out. The Russians feel very sore about the last row in Chemulpo, of which a presumably impartial authority, a German, gives the following account: Some Japanese establishment was celebrating its opening day and when some Russian liberty men happened to stroll into the vicinity they were invited to partake of the cup that cheers and also inebriates. After partaking, one of them got up and tried to buy some cigarettes at a stall in the premises but, owing to the stall-keeper not understanding his gestures, he received instead of cigarettes a blow across the face with a bag said to contain stones. Thus the row began.

The Japanese police and population are alleged to have done their best to make short work of the Russian sailors, who were very much inferior in number to their opponents and a steam-launch belonging to the Shosen Yusen Kaisha is alleged to have made a determined attempt to run down the Russian boat, which was the only means of escape the Russians had. An Englishman is alleged to have pointed a loaded gun at the Russians while the row was going on. A Japanese officer seized the gun, but on the owner informing him that he wanted to shoot, not the Japanese as the officer seemed to imagine, but their opponents, and this because his wife was, he said, a Japanese, the officer allowed him to do as he pleased. Some other Englishmen came along, however, and prevented him from firing. What truth there is in this yarn I cannot, of course, say. I have seen the story in manuscript. That is all I know about it.

Judging from the facts before me, I should say that the Japanese who insisted on searching Russian houses for two very drunken Russian sailors who had been left behind (but whose friends managed to get them off in a boat from another part of the shore) committed an indiscretion that might have had very serious consequences. In the first place, the men might possibly have been murdered if they had been discovered, and in the second place blood might have been spilt if the Russians had resisted. Luckily the Russian Consulate was closed owing to the absence of the Consul in Seoul, and the manager of the local branch of the Chinese Eastern Railway, made no objection to his premises being searched; in fact he courteously showed his unwelcome guests over the whole establishment, which was thoroughly ransacked to the terror of the agent's wife and children. Admiral Alexieff is said to have censured the captain of the Russian gunboat which was lying off Chemulpo at the time for not landing armed men to protect the houses of the Russian residents from being thus violated, and the captain ought of course to have done so, although trouble would almost certainly have ensued if he had.

Last Sunday I stood for the first time this year on ice which was "bearing," and from this the reader may judge of the temperature here. 'Tis bitterly cold, especially at night, when a biting wind blows from the north-east, but there is not much snow. New troops seem to be continually coming in, and a few

days ago a large body of sailors arrived. They will find splendid quarters provided for them in the new Naval Barracks, buildings which compare favourably with anything of the same kind in all Asia.

Sir D. Mackenzie Wallace, author of many books upon Russia and a master of the Russian tongue, was in Manchuria some time back investigating matters there. He is now Secretary to Lord Curzon and it is not improbable that the Viceroy of India was curious to know what the Viceroy of the Far East is doing. It is not impossible that the British advance in Thibet is taken at this juncture in view of Russia's difficulties in Manchuria and as a reward for England's neutrality. English papers may deny that England is neutral in this Manchuria affair, but the *Asiatic* describes England's position as one of correct neutrality and seems gratified in consequence.

PORT ARTHUR NAVAL CLUB.

(FROM OUR CORRESPONDENT.)

Port Arthur, December 8.
One of the centres of civilisation in Port Arthur is the Naval Club where naval officers of all nations, visitors passing through, and foreign residents, who comply with the usual formalities, are treated with great hospitality by the Russian naval officers. It is difficult to exaggerate the kindness the non-Russian meets with here. The Englishman is especially well treated and is especially able to feel himself at home on account of the large numbers of officers who speak perfect English, and of the friendly feeling towards England that generally prevails.

There is a Ladies' Day once a week on which occasion foreign ladies attend and there is dancing; and once a week there is a sort of family dinner at which all the officers and their wives sit down to eat together. It is difficult to realise the extent to which those two little "fixures" of the week contribute towards raising the tone of society in Port Arthur and exercising a salutary influence all around. It is difficult, indeed, to imagine the moral condition to which this fortress might soon be reduced (mind, I am not saying that it is perfect as it is), if the influence of the wives, sisters, and daughters of the officers was withdrawn. Where such an enormous number of men "bursting" almost, if I may use the expression, with vitality and high spirits is gathered together in one place, regrettable excesses are bound to result if a civilising influence is not exerted by woman; and therefore I think that Port Arthur is very lucky in having within its circle of batteries so many of the fair sex, and that it is to be regretted that all the officers now coming out have been forbidden to take their wives with them on account of the lack of accommodation here. Even now, however, Port Arthur holds a high, if not the highest, place in the Far East for the beauty of its womankind. This fact is not surprising considering that no city in Asia has such a large proportion of its population Europeans, and considering also that the climate is dry and bracing—a real "white man's" climate as they say,—and therefore more favourable to the preservation of female beauty than that of Calcutta or Singapore. However that may be, my own melancholy reflections in Port Arthur have convinced me that, in Russia at all events, the soldiers and the sailors get the pick of the ladies. The same view seems to be entertained by other authorities,—perhaps more competent to judge than myself. I was showing a newspaper correspondent from Peking round town the other day and he waxed enthusiastic over the number of fair dames that we met, but, as he came from Peking, his view ought not perhaps to have much weight attached to them. If Port Arthur were not such an expensive place to live in and such "an awful hole" generally, it would be undoubtedly the field of combat selected by "Old Campaigners" of the type portrayed by Thackeray in "Vanity Fair,"—in other words by Russian matrons with marriageable daughters on their hands. To show the success that would be likely to wait upon the operations of such a female strategist, I need only mention the fact that here, as in Singapore, it seems impossible for hospitals and the like to keep nurses any length of time as they get married almost as soon as they come out. Of course there are also "ladies" in Port Arthur and worse still but I shall spare the reader any remarks on this branch of the subject. Returning to the main question I shall prophesy that Port Arthur has every prospect of being quite a beautiful and remarkable city in some ten years' time. Its buildings will be fine, its climate will be as bracing as it is now and its sanitation better, it will have a viceregal court,—probably more splendid than anything outside of India; and its harbour will have by that time become very much better than it is at present. A large number of globe-trotters and Far Eastern residents will also undoubtedly pass through it on their way to and from Europe. This desirable consummation would have been brought much nearer if so much money had not been spent on Dalny and thus diverted from Port Arthur.

Besides the Naval Club, there is also a Garrison Club where private theatricals are frequently given, and the Officers' Club, that is now being built in New Town will, I think, be one of the handsomest things of its kind in the Far East. It will cost about £50,000 sterling and will be sumptuously fitted up in every way so that it will in fact be a regular palace in whose halls the highest of the Russian nobility might—and undoubtedly will—give and be given entertainments without any incongruity. Taking it all round, Port Arthur promises to be a magnificent social centre in a short time.

PORT ARTHUR IN 1903.

This is the title of an article which Colonel Artemieff writes in the *Asiatic* of Sunday last. The Colonel takes a broader view of the question than one might have expected of a military man, for he thinks that now that Port Arthur has ceased to be a mere camp and become a busy commercial centre something should be done towards giving it the privileges enjoyed by other Russian towns and letting the commercial class have a greater voice in municipal concerns. The Colonel does not, of course, say that Port Arthur should be governed in exactly the same way as a Russian town. Its peculiar position necessarily requires some alteration in the municipal regulations in vogue in Russia. The two points on which the Colonel insists are: (1) the necessity of changing the present regulations concerning the rights of election possessed by householders; and (2) the necessity of appointing civilians to administer municipal affairs as in the West. The writer does not think that the foreign element is to be feared, on the contrary he says that its co-operation in municipal affairs cannot but be for the great good of the town. "Finally," he asks, "is the population of Port Arthur, on the whole, of a worse type than the population of Shanghai; and, if it is not a worse type, why not have popular Government here as well as in Shanghai?"

An expedition organised by the General Staff here against the Manchurian Highwaymen who have been proving troublesome of late, has proved successful. The scene of the operations was the Liao River and the Chinese were under the command of Messieurs Tulen-Sana and Falen-hoa. The fourth part of a brigade took part in the operations. In an action at the village of Vafin, the Highwaymen were completely defeated. The Russian losses were four killed and ten wounded, one officer being in the latter category. According to the official statement of the local Chinese administration, the bandits lost about two hundred killed and about as many wounded. This heavy loss on the part of the Chinese was due to a night attack being made by the Russians and to a panic among the bandits. Tulen-Sana lost his right hand which was cut off at the wrist. The expedition did its work with deadly thoroughness. It travelled 400 versts west of the Liao River and afterwards started on a new chase of the same length back again and cornered the Chinese gang on the river. The Russian troops are said to have shown unusual endurance and bravery in the little campaign.

CORRESPONDENCE.

"THE AMERICAN CHURCH."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Every now and then we see some one in print or public speech referring to "The American Church." There are two reasons for doing this; one is pure ignorance and the other is pitiable arrogance, the wish being father to the expression. It would be edifying to have those persons who speak of "The American Church," tell us what form of government said church has and how many members it has. There are those of us who are interested in such things and such explanatory facts would be helpful. The Roman Catholic Church has the largest number of communicants in the United States of any one church, having 9,531,000; next comes the Methodist family with 6,084,000; third, the Baptist family with 4,629,000; fourth, Lutherans with 1,745,000; fifth, Presbyterians with 1,635,000; sixth, Disciples of Christ with 1,207,000. There are other strong and useful churches in America but the above six are the only ones that have a million or more communicants in a population of 80,000,000. Church and State in America are absolutely separated and that too by Constitutional enactment, and there is nothing more certain than that there never will be a national or "American Church." And for any one denomination with a handful of members to assume such an august name would be nothing more than a piece of bigoted arrogance.

Yours,

WILL PATILLO.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

MR. CHAMBERLAIN'S SCHEME.

London, December 18.

Mr. Chamberlain, in his speech at Leeds, outlined his scheme prepared for a tariff reform league and for a non-political commission of experts, comprising representatives of the various industries as well as India and of the Crown and the self-governing colonies, which should examine witnesses from every trade and therefrom frame a model tariff. Several news-

papers announce that the Government is preparing a plan for forming 26 volunteer battalions in Ireland.

THE SUGAR INTERESTS AND THE UNITED STATES.

London, December 17.

The Senate ratified, and President Roosevelt yesterday signed, a reciprocity treaty with Cuba. Great Britain immediately notified the State Department that she expects, under the most favoured nation clause, that British West Indian sugar will be admitted on the same terms as Cuban. It is expected that Germany and other beet-sugar countries will prefer a similar demand.

AMERICA AND PANAMA.

London, December 19.

American Marines have been ordered to land at the Gulf of Darien and at San Miguel's Bay, to prevent any possible Colombian invasion of Panama.

LLOYDS AND WAR RISKS.

At Lloyds insurance has risen by fifty per cent. on cargoes for the Far East, and war-risks have risen 5 per cent.

St. Petersburg continues to send out the most hopeful expressions of a pacific solution of the question.

AUSTRALIAN ELECTIONS.

Later.

The Australian Federal elections have resulted in a signal victory for the Labour party, mainly due to the female franchise.

CHINA AND THE U.S.

The United States Senate has ratified the commercial treaty with China.

RUSSIA SENDING OUT MORE WARSHIPS.

A telegram from Bizerta says that the Russian battleship *Ostlyabya*, the cruisers *Aurora* and *Dimitri Donski*, and five destroyers under Admiral Jirenuis are to be reinforced by six more destroyers within a few days and then sail for the Far East.

FEELING IN GREAT BRITAIN.

London, December 20.

The Japanese Minister in London is receiving from all parts of Great Britain offers of services in the event of War.

Viscount Hayashi has replied that he is deeply impressed by these offers, but under the Japanese rules no foreigner can be employed on active service.

AMERICA AND THE CANAL.

A battalion of American Marines has been ordered to embark on the U.S.S. *Philadelphia* for Colon. The Navy Department keeps the plans secret.

THE RUSSIAN REPLY TO JAPAN.

London, December 21.

Considerable anxiety is experienced in the best informed circles in London concerning the probable outcome of the situation in the Far East. It is certain that Japan will not assent to the provisions of the last Russian Note, which is quite at variance with her main contentions.

LOAN SEEKERS IN NEW YORK.

Japanese representatives have conferred with New York bankers relative to a loan which is admitted would probably be used for war purposes. The conference had no result.

Russia has made a similar fruitless attempt.

THE BRITISH PRESS ON THE SITUATION.

London, December 22.

The English papers generally recognize the gravity of the situation and the possibility of Great Britain becoming involved. The *Morning Post* says that Great Britain

ought to be ready for all eventualities. A Russo-Japanese war would involve Great Britain in serious responsibilities, to meet which preparations are needed.

NAVAL PROMOTION.

Commodore C. G. Robinson, of Hongkong, has been promoted Rear-Admiral.

(Rear-Admiral Robinson, A.D.C., entered the Navy as a Cadet in December, 1864, being then 14 years old. He became a Sub-Lieut. on Oct. 15, 1870; Lieut. Sept. 23, 1873; Commander Dec. 31, 1884; and Captain, Dec. 31, 1890. He was appointed Commodore at Hongkong on February 10th, 1902.—Ed. J.M.)

A SPEECH BY THE KAISER.

London, December 22.

A speech delivered by Kaiser Wilhelm at the military celebrations in Hanover, in which he declared that the Hanoverians and Marshal Blucher saved the English from destruction at Waterloo, has evoked great irritation in England.

WAR RISKS STILL RISING.

London, December 23.

The rate on war-risks at Lloyds is now 40 guineas per centum.

MORE HOPEFUL OUTLOOK.

Later.

A more hopeful feeling regarding the Far East is prevalent in London.

The best informed Japanese circles in London have not received any indications that war is imminent, though they think it is undeniable that the situation continues to be grave, and is affecting trade to some extent.

(RECEIVED AT THE LEGATION OF FRANCE.)

THE SITUATION.

Saigon, December 19.

From London—The reply of Russia to Japan will necessitate supplementary negotiations. The reply does not settle several important questions. Nevertheless the pessimistic information coming from Tokyo is considered to be exaggerated.

(SPECIAL TO THE "JAPAN MAIL.")

THE TANSAN CASE AT SINGAPORE.

Hongkong, December 18.

The suit brought by Mr. Clifford Wilkinson in Singapore with reference to infringement of his Tansan rights has been decided in favour of Mr. Wilkinson.

(RECEIVED IN TOKYO.)

CHINA COMMERCIAL TREATY.

Washington, December 19.

Japanese Legation.

The United States Senate ratified the new Commercial Treaty between China and America on the 18th instant.

(FROM THE "DEUTSCHE JAPAN-POST.")

KAISER.

Berlin, December 18.

Kaiser Wilhelm has left Berlin and gone to the Goehde forests in the Province of Hanover for hunting.

THE SERBIAN REGICIDES.

Count Goluchowski, the Austro-Hungarian Minister of Foreign Affairs, in a speech in which he pressingly emphasized the value of the Triple Alliance and the policy of peace, sharply blamed the slaughter at Belgrade and the encouragement of the Macedonian insurrection by the Bulgarians.

ITALY AND AUSTRIA.

At the same time the Italian Foreign Minister, M. Tommaso Tittoni, speaking in Rome in a similar strain, denied any sympathy with the *Irridentia*, i.e. the party in Italy that wants Southern Tyrol, the city of Trieste and other Austrian frontier districts, disturbing in this manner the harmony of the allied Powers.

Mr. G. E. Atkinson, Mr. R. F. Berry, Mr. E. H. Benson, Mr. L. S. Briggs, Mr. H. S. Burleigh, Mr. J. J. Burleigh, Mr. W. S. Conrow, E. B. Cook, Mrs. E. B. Cook, Mr. C. H. Dan, Mr. A. F. Decker, Mr. H. V. Henson, Mr. J. Edward, Mrs. J. E. Edward, Dr. H. W. Eliot, Mr. A. Hofman, Mr. H. S. Kilbourne, Mr. T. L. Mon, Mr. E. E. McCammon, Miss M. G. Murrin, C. P. Provins, Mr. P. Remington, Mr. R. H. Sades, Mr. M. H. Sakol, Mr. F. B. Shelly, Mrs. J. Shelly, Mr. I. P. Short, Capt. C. E. Stanton, C. E. Stanton, Mrs. Swindell and infant, Mr. W. Gravis, Mr. F. C. Thompson, Mr. C. F. Iden, Mrs. C. F. Walden, Mr. C. A. Westerberg, Miss W. Bibs, and Mrs. Morrison, in cabin.

DEPARTED.

French steamer *Salasie*, for Marseilles via s.—Mr. H. Forster, Mr. C. T. Benney, Mr. and Larne, Mr. F. Gomez de Bonilla, and Mr. C. W. Motley, in cabin.

British steamer *Coptic*, for San Francisco via Honolulu.—Dr. G. d'E. Browne, Mr. W. W. Curtis, Chas. P. Fenner, Mr. W. C. Grieve, Mr. Chas. Hall, Mr. C. W. Kennedy, Mr. W. M. Kerr, Mr. hold Levy, Lt. H. V. Simpson, R.N., and Mrs. Turner and infant, in cabin.

SILK SHIPPERS.

British steamer *Ceylon*, for London via ports: saw Silk for Europe, 54 bales; Waste Silk for rope, 350 bales.

LATEST COMMERCIAL.

IMPORTS.

The year is closing in gloom, the political uncertainty hampering business in every way. The little y caused by the cotton panic has subsided and general condition of the market must be described dull and lifeless.

COTTON PIECE GOODS.

Madras (Dry Leaf), Medium to best ... 100.00 to 140.00

EXPORTS.

RAW SILK.

There has been rather more doing this week for the New York market, but a large portion of the business has consisted of "Direct shipments," thus shifting some of the heavy stock from Yokohama to New York. Business for Lyons is contracted by the strikes there and the outlook at the moment is not brilliant. Prices here are, however, firm, the native dealers doing their best to maintain values in spite of the adverse conditions of the consuming markets.

LAW CONCERNING FAMILY REGISTRY.

TRANSLATED BY DR. L. LOENHOLM.

CHAPTER I.

REGISTRARS AND REGISTRY OFFICES.

1.—Affairs relating to Family Registries and Status Registrations are managed by Family Registrars and performed in Family Registry Offices.

2.—The chief officer of a city, town or village is Family Registrar, but in a city divided into districts the chief of each district may be Registrar.

3.—In matters relating to the Family Registry or Status Registrations of a Registrar or of a person belonging to the same house, the person who is to act as proxy of the chief officer of a city, town or village, or of a district performs the functions of Registrar.

In matters relating to the Family Registry or Status Registrations of a Registrar or a person belonging to the same house and of a person who is to perform the functions of a Registrar under the provisions of the foregoing paragraph, or of a person belonging to the same house, in a city a member of the City Council, in a town or village the highest of the other officers, performs the duties of a Registrar.

4.—In a city the City Office is Family Registry Office, in a town or village the Town or Village Office; but if a chief of a district is Registrar, the District Office is Registry Office.

5.—Affairs relating to Family Registries or Status Registrations are supervised by a judge or by the supervising judge of the Local Court under whose jurisdiction the place is where the Registry Office is situated.

The provisions relating to judicial administrative supervision apply correspondingly to the supervision of affairs relating to Family Registries or Status Registrations.

6.—When a Family Registrar in the performance of his functions causes damage to a person making a notification or any other person, he is liable for damages only in case of bad faith or gross negligence.

CHAPTER II.

STATUS REGISTRATION BOOKS.

7.—There are two kinds of Status Registration Books, namely Books for persons with a permanent registry* and Books for persons without a permanent registry, and of each book an original and a duplicate must be prepared.

Status Registration Books of each kind are kept in separate volumes according to the discrimination of the matters to be notified as specified in Sections 2—21 of Chapter IV., but for the sake of convenience they may be combined.

8.—Status Registration Books are prepared every year.

9.—A Registrar must beforehand prepare the books to be used as next year's Status Registration Books, and must obtain the "Kē-in"† of the supervising judge.

After the supervising judge has received the books, he must affix his official seal at the joining of each two contiguous leaves and note on the inside of the cover the number of leaves and affix thereto his signature with a statement of his position and his official seal and then return the books to the Registrar.

10.—When the paper of a Status Registration Book becomes insufficient, the Registrar must prepare another book and must ask for "Kē-in."

11.—The original of a Status Registration Book must be preserved permanently in the Registry Office.

A duplicate of a Status Registration Book in which registrations have been completed must without delay be transmitted to the District Court having jurisdiction over the supervising Local Court.

The District Court must permanently preserve the duplicates of Status Registration Books.

12.—Status Registration Books must not be removed from the Registry Office except in order to avoid an accident, but this does not apply if there is an order of a Court or a preliminary judge in regard to Registration Books in which registrations have been completed.

13.—Any person may, on paying a fee, inspect Status Registration Books or apply for copies of or extracts from them.

If there is an application for a copy or extract, the Registrar must make such copy or extract and state thereon that it is in accordance with the original, and must affix his signature with a statement of his position and his official seal and deliver it to the applicant.

If a person in addition to the fee pays the postage, the Registrar must forward to him the copy or extract.

If a Registrar rejects an application for inspection

* Sc. within the jurisdiction of the Registrar.

† "Kē-in" means an impression of a seal partly on one leaf and partly on the other.

or for delivery of copies or extracts he must notify the applicant in writing.

14.—When a Status Registration Book has been wholly or partly destroyed the Minister of Justice must make a public notification of that fact and must take the necessary measures for the renewal or restoration of the Book.

CHAPTER III.

PROCEDURE OF REGISTRATION.

15.—Status Registration takes place in the following cases:—

1. When a Registrar has received a notification relating to status or when a written notification has been forwarded to him;

2. When a Registrar has received a communication relating to status;

3. When a Registrar has received a copy of a document relating to status or when such copy has been forwarded to him;

4. When there has been forwarded to a Registrar a copy of a ship's journal in which facts relating to status are entered;

5. When a Registrar has received an application or a request for the cancellation or alteration of a registration;

6. When a Registrar has received a judgment ordering a registration to be made.

16.—Even in the cases specified in the preceding Article a registration can only be made if the notification, the forwarding and the other procedure have been in accordance with the provisions of law.

17.—Except as otherwise provided by law a registration cannot be cancelled or altered.

18.—When a Registrar has received a notification, a communication or other papers relating to registration, he must mark on such papers the reception number and the date of reception and must without delay proceed with the registration.

19.—A registration must be in the proper Registration Book with due discrimination of persons having a permanent registry, of persons without a permanent registry and of the matters to be registered.

20.—If the permanent registry of a person in regard to whom a registration has been made, by notification or for any other reason comes under the jurisdiction of a Registrar or ceases to be under his jurisdiction, such fact must be registered in the "Status Registration Book for persons with a permanent registry."

If a registration relates to a person with a permanent registry and to a person without a permanent registry it must at the same time be made in the "Book for persons with a permanent registry" as well as in the "Book for persons without a permanent registry" and on the margin of each registration a note of reference must be added.

21.—If the permanent registry of a person in regard to whom a registration has been made, is not clear, registration must be made in the "Book for persons without a permanent registry."

22.—In a registration must be inserted the facts in regard to which a notification, communication, application or request has been made in accordance with the provisions of Chapter IV or those inserted in a copy of a ship's journal.

In a registration to be made by virtue of a copy of a document the facts as contained in such copy must be inserted.

In a registration to be made by virtue of a judgment the facts whose registration is ordered by such judgment must be inserted.

23.—If facts to be registered extend over two or more matters to be notified as mentioned in the provisions of Sections 2—21 of Chapter IV, they must be registered separately.

In such case as to each registration only the necessary facts must be registered and on the margin of each registration a note of reference must be added.

24.—A registration of the cancellation of a registration must be made on the margin of the registration which is the subject of the application or request for cancellation, and the original registration must be struck out.

25.—A registration of an alteration of a registration must be made on the margin of the registration which is the subject of such alteration, and the original registration must be altered according to the terms of the judgment on which such application is based.

26.—When a person whose permanent registry is not known has made a registration, if afterwards it is notified or communicated that his permanent registry has become known, registration thereof is to be made on the margin of the original registration.

If a person whose permanent registry has become known has his permanent registry within the jurisdiction of the Registrar, a new registration without regard to the provisions of the preceding paragraph must be made in the "Book for persons with a permanent registry," and on the margin of this registration and of the former registration a note must be added for purposes of reference.

If after the registrations mentioned in the foregoing two paragraphs have been effected another notification

as to the permanent registry of such persons is made, it is sufficient to state on the margin of such registrations the fact that a notification or communication has been made.

27.—If a person who has lost Japanese nationality does not make a notification as to such loss, the Registrar must, with the permission of the Local Court having jurisdiction in the place where the Registry Office is situated, register the loss of nationality.

28.—In addition to the matters determined by Art. 22 the following facts must be inserted in a registration:—

1. The date of the reception of a notification or application. In case a notification has been transmitted from another Registrar or Public Office, the official position of the sender, his name and the date of transmission must also be inserted;

2. The date of the transmission and reception of the communication or request and the official position and name of the person making such communication or request;

3. The date of transmission and receipt of the copy of a document or a ship's journal and the official position and name of the person who has made out such document or journal and of the person who has transmitted the copy;

4. The date of the decision by which registration has been ordered and the name of the Court.

29.—In making a registration no abbreviated characters or signs must be used and the manner of writing must be distinct.

In entering date, hour or age instead of 一二三

十 the characters 壹貳叁拾 must be used. Characters must not be amended: if a character has been corrected, inserted or struck out, the number of such characters must be stated on the margin or brackets must be added in front and at the end of the characters, and the Registrar must affix his "mitome-in," and the form of the characters struck out must be left so that they remain legible.

30.—Except as otherwise provided by law, registration must be made following the order of days in accordance with the order of reception of each matter, a number must be added to each matter, and the preceding and the following registration must be so connected that there shall be no vacant line in the paper.

31.—Each time a Registrar has made a registration he must affix his "mitome-in" to the end of the text.

32.—When a registration is to be made on the margin, if there is no blank space available on the paper, it can be made on an appended slip. In such case the Registrar must make "ke-in" on the joining of the slip and the principal paper.

33.—When the permanent registry of a person as to whom a registration has been made is, by virtue of a notification, transferred from the jurisdiction of a Registrar to that of another Registrar, the former must, after having made the registration, without delay transmit to the new Registrar the original of the notification.

When the permanent registry of a person as to whom a registry has been made is transferred from the jurisdiction of one Registrar to that of another, the latter after having made registration, must without delay transmit a copy of the notification to the former Registrar.

34.—If the permanent registry of a person as to whom a registration has been made outside of the jurisdiction of the Registrar who has received the notification, is transferred from the jurisdiction of one Registrar to that of another, the Registrar who has received the notification must without delay, after having made registration, transmit the original of the notification to the Registrar now having jurisdiction and a duplicate to the Registrar who formerly had jurisdiction.

35.—If in other cases than those mentioned in the preceding two Articles the permanent registry of a person as to whom a registration has been made does not belong to the jurisdiction of the Registrar, the latter must without delay, after having made registration, transmit the original of the notification to the Registrar having jurisdiction.

36.—The provisions of Arts. 33 and 34 apply correspondingly to cases where a transfer of a permanent registry does not take place for a reason other than notification.

In such case the Registrar must make a copy of the documents received, such copy taking the place of a duplicate of the notification. The same applies if in case a registration is made for a reason other than notification, the permanent registry of the person as to whom the registration has been made does not belong to the jurisdiction of the Registrar.

37.—When a registration has been made, the number and date of the registration must be entered on the notification and on all other documents received relating to such registration, and must be bound separately according to the discrimination of the Registration Book, and a list must be annexed.

38.—The papers mentioned in the preceding article must without delay be forwarded every month

to the supervising Local Court and the Court must preserve them.

The period within which such papers are to be preserved is determined by the Minister of Justice.

39.—Each time that a Registrar has made a registration he must without delay, following the procedure which takes place in making a registration, transcribe the whole text into the duplicate Registration Book.

If after a duplicate of a Registration Book has been forwarded to the District Court a registration on the margin has been made, the Registrar must without delay make a copy of such registration, affix his signature with a statement of his position and his official seal and forward it to the District Court.

The President of the District Court must affix the copy thus received to the margin of the corresponding registration in the duplicate, and must make "ke-in" between the copy and the principal paper.

40.—If after a registration has been made it is discovered that there is in regard to such registration an error or omission, the Registrar must without delay give notice thereof to the person who made the notification or to the person to whom the matter registered refers.

41.—A Registrar must at the end of every year insert in the line next to the last registration a statement that this is the end and must affix his signature with a statement of his position and his official seal.

The foregoing provisions apply correspondingly when before the last registration is made the whole paper of the Registration Book has been used up.

CHAPTER IV.

NOTIFICATIONS RELATING TO STATUS.

SECTION I.

GENERAL PROVISIONS.

42.—Notifications relating to status must be made to the Registrar of the place where the person making the notification has his permanent registry; but if he stays outside of the place of his permanent registry he may make the notification to the Registrar of the place where he stays.

If a person making a notification has no permanent registry, the place where he stays is in regard to such notification treated as his place of permanent registry.

43.—A notification must be made in writing, but if there is proper reason, the person making the notification may, on explaining the reason to the Registrar make his notification orally.

44.—A notification must contain the following facts, and the person making it must annex his name and seal:—

1. The matter to which the notification refers;
2. The date of the notification;
3. The class, profession, date of birth and place of permanent registry of the person making a notification.

45.—If the person making a notification is different from the person to whom the matter refers, the notification must mention the relation existing between them.

If the person making a notification is a member of a house, the notification must mention the name of the head of the house and the relation existing between the person making the notification and the head of the house.

46.—When a person who is to make a notification is a minor or is adjudged incompetent* the person who exercises the parental power or the guardian is bound to make the notification.

In such case the person making a notification must insert in the notification the following facts:—

1. The name, class, date of birth and place of permanent registry of the person who is to make a notification;
2. The ground for his incapacity;
3. Whether the person making a notification is exercising parental power, or is a guardian of the incapacitated person.

47.—The provisions of the preceding Article do not apply to acts which an incapacitated person can do without the consent of his legal representative. When a person adjudged incompetent makes a notification, he must annex thereto a certificate of examination by a physician showing that he has sufficient capacity to understand the nature and effect of the matter to be notified.

48.—In regard to notifications of matters for which witnesses are required, the latter must state in the notification that they are witnesses and mention the date of their birth, their profession and the place of their permanent registry.

49.—When a person making a notification or a person to whom the matter to be notified refers, or a witness for a notification, stays outside of the place of his permanent registry, he must mention in the notification the place where he is staying.

50.—If among the circumstances which according to this law must be inserted in a notification there

are facts which do not exist or are not known, a statement thereof must be inserted; but a Registrar cannot receive a notification from which facts particularly essential for this special notification are missing.

51.—In a notification only facts provided for in this law or other laws or regulations may be inserted.

52.—The provisions of Art. 29 apply correspondingly to insertions to be made in a notification.

53.—When a notification is made outside of the place of a permanent registry, it is to be made out in original and duplicate.

When according to a notification the permanent registry of one or more persons is transferred from one house to another house, if the places of permanent registry of both houses differ in regard to the jurisdiction of the Registrar, the notification must be made out in original and duplicate; if the place of notification and the places of permanent registry of both houses differ in regard to the jurisdiction of the Registrar, the notification must be made out in original and there must be two duplicates.

54.—When a notification is made orally, the person making the notification must personally appear before the Registrar and declare the matters to be notified, and the Registrar must at once take down in writing such declaration and the date of the notification, the name of the person making the notification, the date of his birth, his profession and the place of his permanent registry, and must read it to said person and have him sign and seal it.

55.—The provisions relating to a written notification apply correspondingly to documents to be made by a Registrar according to the provisions of the preceding article.

56.—The provisions of Arts. 43, 57 and 55 apply to a consent, assent or acknowledgment relating to matters to be notified.

57.—Unless otherwise provided for by law, if according to the provisions of this law a permission by a public office is required, a person making a notification must annex a copy of such permission.

58.—If a person making a notification cannot because of sickness or of some other reason appear before the Registrar, he may send a representative.

59.—A Japanese subject living in a foreign country may make a notification to a Japanese Minister or Consul residing in such country.

60.—If a Japanese subject in a foreign country has had a document relating to a matter to be notified, made out in accordance with the legal forms of such country, he must within three months forward a copy of such document to a Japanese Minister or Consul residing in such country.

If no Japanese Minister or Consul resides in the respective country, he must, one month after his return, present a copy of the document to the Registrar of the place of his permanent registry.

61.—Copies of notifications or documents received by a Minister or Consul in accordance with the provisions of the preceding two Articles must within three months be forwarded by said Minister or Consul to the Minister of Foreign Affairs, and by the latter within ten days to the Registrar of the place of the permanent registry of the person in question.

62.—Periods determined by this Law are computed from the day when the matter to be notified came into existence.

If a period is to be computed from the day when a judgment became finally binding, and if such judgment has become finally binding before it has been served upon or delivered to the person bound to make a notification, computation is made from the day when such service or delivery has been effected.

63.—When a person has been fined for having omitted to make a notification within the period fixed by this Law, the Court must without delay inform the Registrar where such notification is to be made, unless such Registrar has already given notice that he has received such notification.

When a Registrar has received an information as mentioned in the foregoing paragraph, he must give notice to the person bound to make a notification to make it within a certain period to be fixed by him.

If a person bound to make a notification does not make it within the period fixed according to the provisions of the foregoing paragraph, the Registrar must again give him notice fixing a proper period, and the same applies if the person bound to make a notification again does not comply with such notice.

64.—When a Registrar has knowledge that there is within his jurisdiction a person who in violation of the provisions of this Law has not made a notification, he must without delay give notice thereof to the Court having jurisdiction in such matters.

65.—A Registrar must receive a notification even though it is made after the expiration of a period.

66.—A person making a notification may on paying a fee require a certificate of receipt to be delivered to him.

67.—The provisions relating to notifications apply correspondingly to the cancellation or alteration of registrations.

SECTION II.

BIRTH.

68.—When a child is born a notification must be made within ten days, together with a statement of the following facts:

1. The name of the child and whether it is a male or female.
2. If the child is a natural child or if it is a *shoshi*† because of an acknowledgment made before the birth, such fact;
3. The date and hour when and the place where the birth has taken place;
4. The name, class, profession and place of permanent registry of the parents; but in the case of a natural child only the name, class, profession and place of permanent registry of the mother must be inserted.
5. The name, class, profession and place of permanent registry of the head of the house which the child is to enter;
6. If a child establishes a house of his own, such fact and the reason for such establishment.
7. If it is a child of a person who has no nationality, such fact.

69.—A notification of the birth of a legitimate child is to be made to the Registrar of the place of birth or to that of the place of permanent registry of the parents or if they live in some other place, to the Registrar of such place. A notification of the birth of a *shoshi* is to be made at the place of birth or at the place of permanent registry of the father or some other place where he lives. A notification of the birth of a natural child or of a child that cannot enter the house of his father is to be made to the Registrar of the place of birth or to that of the place of permanent registry of the mother, or if she is in some other place, to the Registrar of such place.

70.—If a birth takes place in a train or in a ship which does not keep a ship's journal the place of arrival is considered as the place of birth in regard to the notification to be made.

71.—A notification of the birth of a legitimate child is to be made by the father, and if the father is unable to make it and in the cases mentioned in the restrictive provision of Art. 734, 1 and 2 of the Civil Code, by the mother.

A notification of the birth of a *shoshi* must be made by the father, that of a natural child by the mother.

If the persons mentioned in the foregoing two paragraphs cannot make a notification the following persons according to their order are bound to make the notification:—

If there are several persons of the same order bound to make a notification, it is sufficient if one of them make it:

1. Head of the house;
2. Persons living in the same household at the time of the birth;
3. Doctors or midwives who have been present at the time of the birth;
4. The person who as wet nurse has attended to the pregnant woman.

72.—Although a husband intends to contest the legitimacy of the child of his wife, he must nevertheless make a notification of the birth according to the provisions of Art. 71, 1.

73.—If according to the provisions of Art. 821 of the Civil Code the court is to determine the father of the child, the mother must make the notification of the birth. In such case there must be mentioned in the written notification the circumstances by which the father is not determined.

When a father has been determined by the Court, he must within one month after the judgment has become finally binding make a notification together with all facts specified in Art. 68, and must annex a copy of the judgment and must apply for the cancellation of the registration made according to the provisions of the first paragraph of this Article.

74.—When a child is born in a hospital, in a prison or any other public establishment, if a notification cannot be made by the father or mother, the chief or administrator of such hospital, prison or other public establishment must make the notification of the birth.

75.—A person who has found a foundling must within 24 hours notify such fact to the Registrar.

When the finding of a foundling has been notified the Registrar must give him a name and must make a protocol stating therein the clothes and things which the foundling had, the place where and the date and hour when he or she was found, and other circumstances, and further the presumptive year and month of his or her birth, his or her name and sex, the name, profession and place of permanent registry or residence of the person who has received the foundling or the name and place of the orphanage which has received him or her and the date of his or her being handed over to such establishment and must affix such protocol to the written notification.

If a change takes place in the person who received

† See Art. 827 of my translation of the Civil Code.
‡ See Art. 820, of my translation of the Civil Code.

* See Art. 9 of my translation of the Civil Code.

the foundling or in the orphanage both must make a notification within ten days.

76.—When the father or mother has discovered the foundling and received him back, he or she must within one month make a notification as provided by Art. 68 and must make an application for the cancellation of the registration of the finding of the foundling.

77.—If before a notification of the birth of a child or of the finding of a foundling has been made, the child or the foundling dies, a notification of the birth of the child or of the finding of the foundling as well as a notification of the death must be made.

78.—When a child is born on a ship, the captain of a man-of-war or other ship must before witness chosen within 24 hours from among the persons on board ship enter in the ship's journal all the facts mentioned in Art. 68, must sign and seal it together with the witness, and must also insert the date of the birth the profession and the place of permanent registry of the witness.

If the ship after the foregoing proceeding has been taken enters a Japanese harbour, the Captain must within 24 hours forward to the Registrar of that place a copy of the ship's journal relating to the birth.

The protocol mentioned in the second paragraph is in regard to registration considered as the document of notification.

If the ship enters a foreign harbour, the Captain must without delay send a copy of the ship's journal relating to the birth to the Japanese Minister or Consul residing in that country and the Minister or Consul must within three months transmit it to the Minister of Foreign Affairs, who must within ten days transmit it to the Registrar of the place where the parents have their permanent registry.

CHAPTER III.

CONTESTATION OF THE LEGITIMACY OF A CHILD.

79.—When a judgment relating to the contestation of the legitimacy of a child has become finally binding, the contestant must within one month from the day when the judgment becomes finally binding make a notification thereof together with the following facts, and must annex a copy of the judgment; and if a registration of birth has been already effected, he must apply for the amendment of such registration:

1. The name and sex of the child;
2. The date of birth;
3. The date on which the judgment relating to the contestation has become finally binding.

SECTION IV.

ACKNOWLEDGMENT OF A NATURAL CHILD.

80.—In a notification of the acknowledgment of a natural child the following facts must be inserted:—

1. The name and sex of the child;
2. The date of birth;
3. If a child has been acknowledged after his or her death, the date of death;
4. If the father makes an acknowledgment, the name, profession and place of permanent registry of the mother.

If in the case mentioned under No. 4 the mother is a member of a house, the name of the head of such house, his profession, the place of his permanent registry and the relation between such head of a house and the mother must be entered.

81.—In an acknowledgment made in accordance with Art. 831, of the Civil Code the person acknowledging must notify that he makes an acknowledgment of a child in the womb, mentioning the name, profession and place of permanent registry of the mother.

82.—If according to the provisions of Arts. 830 and 831 of the Civil Code the consent of the child, the mother or the direct blood relatives is required, the person making a notification must annex a document showing such consent, or he must cause the person who gave his consent to state it on the written notification and to sign and seal the same.

If an acknowledgment is made by a last will, the executors of such last will must within ten days from the day when it took effect make a notification of the same according to Art. 3, annexing a copy of the last will relating to the acknowledgment.

In a notification of an acknowledgment by last will the date of the death of the person acknowledging must be mentioned.

84.—If a child which has been acknowledged when in the womb, is still-born, the person who is bound to make notification of the birth must within one month from the day when he knew such fact apply for cancellation of the registration of acknowledgment, but when the executors of a last will have made a notification of acknowledgment the latter must apply for cancellation of the registration of acknowledgment.

SECTION V.

ADOPTION.

In the notification of adoption the following facts must be mentioned:—

- 1.—The name, date of birth, profession and place of permanent registry of the persons concerned;

2.—The real parents of the person adopted, their profession and the place of their permanent registry;

3.—If any of the persons concerned is a member of a house, the name, profession and place of permanent registry of the head of the house.

If the person adopted from a house he had entered by way of marriage or by becoming a "mukoyōshi" again enters another house in addition to the facts specified in the preceding paragraph, the name, profession and place of permanent registry of the head of the house which he had entered by way of marriage or of his former adoptive parents must also be mentioned.

86.—Persons who have made an agreement of adoption under the provisions of Art. 843 of the Civil Code must make the notification of adoption in place of the person adopted.

87.—When, according to the provisions of Arts. 741, 1, 750, 1, 841, 2 and 843-846 of the Civil Code, the consent of the head of the house, of the parents, of the husband or wife, of the guardian or of the family council is required, the person making a notification must either annex thereto a document showing such consent, or must cause the person or persons who gave consent to state such fact in the written notification and affix his or their signatures and seals thereto.

88.—When a husband or a wife under the provisions of Art. 842 of the Civil Code makes an adoption in the name of both, the reason for so doing must be mentioned in the notification.

89.—When a notification of adoption is made according to the provisions of Art. 848 of the Civil Code, the facts specified in Art. 85 and the date of the death of the testator must be mentioned therein and a copy of the last will relating to the person adopted must be annexed.

90.—A notification of adoption must be made either to the Registrar of the place of the permanent registry of the adoptive parents or of the place where they are staying.

91.—When an adoption becomes invalid, the person who made the notification must on presenting a document showing the ground for such invalidity apply for the cancellation of the registration.

92.—When a judgment proclaiming the invalidity or cancellation of an adoption has become finally binding, the person who brought the action must within one month from the day when the judgment became finally binding apply for cancellation of the registration, presenting a copy of such judgment.

93.—The provisions of Art. 85 and Arts. 87-89 apply correspondingly in case a notification is made orally.

94.—The provisions of Art. 58 do not apply to a notification of adoption.

SECTION VI.

DISSOLUTION OF ADOPTION.

95.—In a notification of the dissolution of an adoption the following facts must be mentioned:—

1. The names, profession and place of permanent registry of the persons concerned;
2. The name, profession and the place of permanent registry of the real parents of the person adopted;
3. If any of the parties concerned is a member of a house, the name, profession and place of permanent registry of the head of the house;
4. The date of adoption;
5. A statement whether the dissolution took place by mutual consent or by virtue of a judgment;
6. If the wife of the person adopted quits the house together with him, such fact and her name;
7. The name, profession and place of permanent registry of the head of the house which the person adopted is to re-enter;
8. If there is no house which the person adopted might re-enter, the ground thereof.

96.—When dissolution is made according to the provisions of Art. 862, 2 of the Civil Code, the notification must be made by the person who made the agreement in place of the person adopted.

97.—If dissolution is made according to the provisions of Art. 862, 3 of the Civil Code, it is sufficient that notification is made by the person adopted.

98.—If according to the provisions of Arts. 862, 3 and 863 of the Civil Code the consent of the head of the house, the parents, the guardian or the family council is required, the person who makes the notification must annex thereto a document showing such consent, or must cause the person or persons who gave consent to state such fact in the written notification and affix his or their signatures and seals thereto.

99.—When a judgment proclaiming the dissolution of adoption has become finally binding, the person who brought the action must make a notification of the dissolution within ten days from the day when such judgment became finally binding.

100.—The provisions of Arts. 95 and 98 apply correspondingly in case a notification is made orally.

101.—The provisions of Art. 58 do not apply to the notification of dissolution.

SECTION VII.

MARRIAGE.

102.—In a notification of marriage the following facts must be mentioned:—

1. The name, date of birth and place of permanent registry of the persons concerned;
2. The name, profession and place of permanent registry of the parents;
3. If any of the parties concerned is a member of a house, the name, profession and place of permanent registry of the head of the house;
4. If a husband enters a house of which his wife is the head, or if the husband becomes "mukoyōshi," such fact;
5. If in case the husband enters a house of which his wife is the head, the husband is not to become head of the house, such fact;
6. If there is a "shoshi"† who becomes a legitimate child by a marriage, his or her name and the date of his or her birth.

If one of the parties concerned from a house which he or she entered by marriage or adoption again enters another house by marriage, in addition to the facts specified in the foregoing paragraph, the name, profession and place of permanent registry of the head of such house of the adoptive parents must be mentioned.

103.—If, according to the provisions of Arts. 741, 1, 750, 1, 772 and 773 of the Civil Code, the consent of the head of a house, the parents, the guardian or the family council is required, the person making a notification must either affix to the written notification a document showing such consent or must cause the person or persons who gave consent to state such fact in the written notification and affix his or their signatures and seals thereto.

104.—A notification of marriage must be made to the Registrar of the place of the permanent registry of the husband or of the place where he is staying, but in case the woman to be married is the head of a house or the husband is to become "mukoyōshi," such notification must be made in the place of the permanent registry of the wife or in the place where she is staying.

105.—When a marriage becomes invalid, the person making a notification must apply for the cancellation of the registration, presenting a document showing the ground for its invalidity.

106.—When a judgment proclaiming the invalidity or cancellation of a marriage has become finally binding, the person who brought the action must within one month from the day when the judgment became finally binding apply for the cancellation of the registration, presenting a copy of the judgment.

When a public procurator has brought the action, he must make a request for the cancellation of the registration in accordance with the provisions of the foregoing paragraph.

107.—The provisions of Arts. 102 and 103 apply correspondingly in case a notification is made orally.

108.—The provisions of Art. 58 do not apply to a notification of marriage.

SECTION VIII.

DIVORCE.

109.—In a notification of divorce the following facts must be mentioned:—

1. The name, profession and place of permanent registry of the parties concerned;
2. The name, profession and place of permanent registry of the parents;
3. If any of the persons concerned is a member of a house, the name, profession and place of permanent registry of the head of the house;
4. The date of marriage;
5. Whether the divorce is made by mutual consent or by virtue of a judgment;
6. The name, profession and place of permanent registry of the heads of the houses which the persons concerned are to re-enter;
7. If there is no house which a person concerned may re-enter, the ground thereof.

110.—When, according to the provisions of Art. 809 of the Civil Code, the consent of the parents, of the guardian or of the family council is required, the person making a notification must either affix a document showing such consent or must cause the person or persons who gave consent to state such fact in the written notification and to affix his of their signatures and seals thereto.

111.—When a judgment proclaiming a divorce has become finally binding, the person who brought the action must within ten days from the date when such judgment became finally binding make a notification annexing a copy of the judgment.

112.—The provisions of Arts. 109 and 110 apply correspondingly in case a notification is made orally.

113.—The provisions of Art. 58 do not apply to notifications of divorce.

* See note on page 207 of my translation of the Civil Code.

† See Art. 827 of the Civil Code, page 218 of my translation.

SECTION IX.
GUARDIANSHIP.

114.—When a case for guardianship has arisen, the guardian must within ten days after entering upon his duties make a notification thereof together with a statement of the following facts:

1. The name, date of birth, profession and place of permanent registry and domicile of the guardian;
2. The name, date of birth, profession and place of permanent registry of the ward;
3. If the ward is a member of a house, the name, profession and place of permanent registry of the head of the house;
4. The reason why, and the date when, the case for guardianship has arisen.
5. The date when the guardian entered upon his duties.

115.—If there is a change in the person of a guardian, the newly appointed guardian must within ten days from the day when he entered upon his duties make a notification of the facts specified in the preceding Article and of the name of the former guardian.

116.—If a guardian has been designated by a last will, a copy of the last will relating to such designation must be annexed to the notification.

If a guardian has been appointed by a family council, the document relating to such appointment must be annexed to the notification.

117.—When the functions of a guardian have ceased, he must within ten days make a notification thereof together with the following facts:

1. The name, date of birth, profession and place of permanent registry of the ward;
2. The date when the guardian entered upon his duties;
3. The reason why, and the date when, his functions ceased.

If the functions of a guardian have ceased by his death, the supervisor* of the guardian must make the notification provided for in the foregoing paragraph.

118.—Notifications relating to guardianship must be made to the Registrar of the place where the ward has his permanent registry or to the Registrar of the place where he is staying.

SECTION X.

REGISTRATION OF THE RESIGNATION OF THE
HEADSHIP OF A HOUSE.†

119.—In a notification of resignation of the headship of a house the following facts must be mentioned:

1. The name, class, date of birth, profession and place of permanent registry of the person resigning;
2. The name, date of birth, profession of the heir to the house and the relation existing between the head of the house and the heir;
3. The ground of the resignation.

120.—When a resignation is made with the permission of the court, a copy of the court's decree must be annexed to the notification.

121.—A person making a notification of resignation must together with the notification either present a document showing the consent of the heir to the house or must cause him to state his consent on the notification and affix his signature and seal thereto.

These provisions apply correspondingly to a notification of a case as to which the consent of a husband is required according to the provisions of Art. 755, 2, of the Civil Code.

122.—When a judgment proclaiming the cancellation of a resignation has become finally binding, the person who brought the action must within one month from the day when it became finally binding make an application for the cancellation of the registration, presenting a copy of the judgment.

The provisions of Art. 106, 2 apply correspondingly to the foregoing provisions.

SECTION XI.

DISAPPEARANCE.

123.—If an adjudication of disappearance has been made, the person who applied for such adjudication must within ten days from the day when the judgment became finally binding make a notification thereof together with a statement of the following facts and annex a copy of the judgment thereto:

1. The name, date of birth, profession and place of permanent registry of the person who has disappeared;
2. The date when the adjudication of disappearance was made;
3. If the person who has disappeared was a member of a house, the name and class of the head of the house and the relation existing between the person who has disappeared and the head of the house.

124.—If an adjudication of disappearance has been cancelled, the person who applied for such

cancellation must within one month from the day when the judgment became finally binding apply for the cancellation of registration, presenting a copy of the judgment.

SECTION XII.

DEATH.

125.—When a person has died, the person bound to make a notification of his or her death must within five days from the day when he had knowledge of the death make a notification thereof together with a statement of the following facts and annex a certificate of a physician about the examination or inspection of the person deceased or a copy of a protocol of inspection made out by a police officer, namely:

1. The name, date of birth, sex and place of permanent registry of the person deceased;
2. The date and hour when, and the place where, the person died;
3. If the person deceased was a member of a house, the name and class of the head of the house and the relation existing between the head of the house and the person deceased.

The foregoing period may be shortened by a regulation if it is particularly necessary for hygienic reasons.

126.—The following persons are bound to make a notification of the death of a person in the order in which they are enumerated in this article:

1. The head of the house;
2. Persons living in the same household;
3. The owner of the house, the owner of the land or the administrator of the land or house.

If there are several persons of the same order bound to make a notification, it is sufficient if one of them makes it.

127.—A notification of death must be made to the Registrar of the place where the death occurred or of the place where the person deceased had his permanent registry or of any other place where he was residing.

128.—The provisions of Arts. 70 and 74 apply correspondingly to a notification of death.

129.—When a capital punishment has been executed, the competent chief of the prison must without delay communicate the death together with the facts mentioned in Art. 125 to the Registrar of the place where the prison is situated.

These provisions apply correspondingly if there is none who is to take over the body of a person who died in a prison. In such case a certificate of examination or inspection made out by a physician must be annexed to the communication.

130.—If a person has died in a ship, the captain must within twenty-four hours, before a witness chosen from among the persons on board, enter in the ship's journal the facts specified in Art. 125 and he and the witness must affix their signatures and seals thereto and the captain must state in the ship's journal the date of birth, profession and place of permanent registry of the witness.

When the ship, after the foregoing proceedings have been taken, enters a Japanese port, the captain must within twenty-four hours deliver to the Registrar of such place a copy of the ship's journal relating to the death.

If the ship enters a foreign port, the captain must without delay transmit a copy of the ship's journal relating to the death to the Japanese Minister or Consul residing in such country, and the Minister or Consul must within three months forward it to the Minister of Foreign Affairs, who must within ten days forward it to the Registrar of the place where the person deceased had his permanent registry.

131.—If by a ship's accident the whole or part of the crew and the passengers have died, the Government or other public office which has investigated such accident must communicate the deaths to the respective places of permanent registry of the persons deceased.

132.—If the place of permanent registry of a person deceased is not known and if it cannot be found out who the dead person is, the police must without delay make out a protocol of examination and must communicate it to the Registrar of the place where the death happened.

If afterwards the place of permanent registry of a known or his identity is ascertained, the police office must again communicate such fact to the Registrar who received the former communication.

If any of the persons who, according to the provisions of Art. 126, 1, Nos 1 and 2 are bound to make a notification of death, has knowledge of the facts mentioned in the foregoing paragraph, he must within ten days make a notification of death. In such case he may instead of a physician's certificate of examination or inspection annex a copy of a certificate of inspection made by a police officer.

SECTION XIII.

SUCCESSION TO A HOUSE.

133.—When a person by succession has become the head of a house he must within one month from the day when he had knowledge thereof make a

notification of such fact to the Registrar of the place of permanent registry of the person to be succeeded to together with a statement of the following facts:

1. The ground of the succession to the house and the date when he became head of the house;
2. The name of the former head of the house and the relation existing between the former head of the house and the heir to the house.

When an heir to a house is in a foreign country, it is sufficient for him if he forwards a written notification within three months.

134.—When a judgment for the recovery of a succession to a house has become finally binding, the person who has recovered the right of succession must within one month from the day when judgment became finally binding, make a notification of such fact together with the facts specified in the preceding article and must apply for the cancellation of the registration of succession made before.

135.—When a child unborn is successor to a house his mother must within one month from the day when the succession has occurred make a notification of succession to the house together with a statement of the following facts, and annex a certificate of examination by a physician:

1. The date of the occurrence of the succession.
2. The fact that the heir to the house is yet unborn;
3. The name of the former head of the house and the relation existing between him and the heir to the house.

The provisions of Art. 133, 2, apply correspondingly to the foregoing notification.

136.—When a notification of the fact that a child unborn has become heir to a house has been made, and such child is afterwards still-born, the mother must within one month from the day of the birth present a certificate of inspection by a physician or midwife who has assisted the delivery and must apply for the cancellation of the registration.

If the mother does not make an application for the cancellation of the registration the heir to the house must make it within one month from the day when he had knowledge of the above mentioned facts.

SECTION XIV.

DEPRIVATION OF AN EXPECTANT HEIR TO A HOUSE.†

137.—When a decision proclaiming the deprivation of an expectant heir to a house has become finally binding, the person to be succeeded to must within ten days from the day when it became finally binding make a notification thereof together with a statement of the following facts, and annex a copy of such decision, namely:

1. The name, date of birth and profession of the person deprived of his right of succession;
2. The reason for the deprivation;
3. The date on which the decision for deprivation has become finally binding.

138.—If a person to be succeeded to has by a last will expressed his intention that the expectant heir to a house shall be deprived of his right of succession, when the judgment for deprivation has become finally binding, the notification provided for in the preceding article must be made by the executors of the last will. In such case the date of the death of the person to be succeeded to must be stated in the notification.

139.—If a decision proclaiming the cancellation of a deprivation has become finally binding, the person who demanded the cancellation must within one month from the day when the decision became finally binding, apply for the cancellation of the registration and at the same time present a copy of such decision.

SECTION XV.

DESIGNATION OF AN HEIR TO A HOUSE.†

140.—In a notification of the designation of an heir to a house the following facts must be mentioned:

1. The name, class, date of birth, profession and place of permanent registry of the designated heir to the house;
2. The fact that there is no legal expectant heir.

141.—If a notification of the designation of an heir to a house is made according to the provisions of Art. 981 of the Civil Code, there must be inserted the facts specified in the preceding article and the date of the death of the person to be succeeded to, and a copy of the last will relating to such designation must be annexed.

142.—In a notification of a cancellation of a designation of an heir to a house the following facts must be mentioned:

1. The name, class, date of birth, profession and place of permanent registry of the designated heir to a house;
2. The date of the designation.

143.—A person making a notification of the cancellation of a designation of an heir to a house must at the same time apply for the cancellation of the registration of the designation of such heir.

* Arts. 925 ff of Civil Code, p. 238 of my translation.

† See Art. 979 ff of the Civil Code.

* See p. 240 of my translation of the Civil Code.

† See p. 197 of my translation of the Civil Code.

144.—When a notification of the cancellation of a designation is made according to the provisions of Art. 981 of the Civil Code, the applicant must comply with the provisions of the preceding two articles and in addition must insert in the notification the date of the death of the person to be succeeded to and must annex thereto a copy of the last will relating to the cancellation of the designation.

145.—When a designation of an heir to a house has lost its effect, the person who has made such designation must within one month from the day when he had knowledge of such fact present a document showing the cause for which the designation has lost effect and must apply for the cancellation of the registration.

CHAPTER VI.

ENTERING A FAMILY REGISTRY, EXCLUSION FROM A FAMILY REGISTRY AND PROHIBITION FROM RE-ENTERING A FAMILY REGISTRY.

146.—A person who wants to become a member of another house according to the provisions of Art. 735, 1, or Art. 737 of the Civil Code, or who according to the provisions of Art. 738 of the Civil Code wants his relative to become a member of the house which he entered by marriage or adoption or of his own house must make a notification of entering a family registry together with a statement of the following facts:—

1. The name, date of birth, profession and place of permanent registry of the head of the house which a person is to enter;

2. The relation between the head or member of the house which a person is to enter and such person;

3. If a person is to enter another house by abandoning his house, such fact;

4. If a person who is to enter a house becomes a member of the house, the name, date of birth, profession, place of permanent registry of the head of the house which he is to quit, and the relation between the head of the house and such person.

147.—When according to the provisions of Arts. 735, 1, 737 and 738 of the Civil Code the consent of the head of a house, of a husband or wife, of the adoptive parents, of a person having parental power or of a guardian is required, the person making a notification must either annex to the notification a document showing such consent or must cause the person who gave consent to state this fact on the notification and affix his signature and seal thereto.

148.—If a head of a house wants to exclude a member of his house from the family registry he must make a notification thereof together with a statement of the following facts:—

1. The name, date of birth and profession of the person to be excluded;

2. The ground for the exclusion and the date when such exclusion has occurred;

3. If there is a person who is to quit the house together with the person to be excluded, his name, date, and profession and the relation existing between such person and the person to be excluded.

149.—A person who by virtue of his being excluded from his family registry has established a house of his own, must within ten days from the day when he had knowledge of such fact make a notification thereof together with a statement of the following facts:—

1. The name, date of birth, profession and place of permanent registry of the head of the house who made the exclusion;

2. The relation existing between the head of the house who made the exclusion and the person making the notification;

3. The reason why and the date when the exclusion has been effected;

4. If there is a person who is to enter the house of the person making a notification, his name, date of birth, profession and the relation existing between such person and the person making the notification.

150.—If a head of a house wants to prohibit a person who has been a member of his house from re-entering the family registry, he must make a notification thereof together with a statement of the following facts:—

1. The name, date of birth, profession and place of permanent registry of the person whose re-entering is to be prohibited;

2. If the person whose re-entering is to be prohibited is a member of a house, the name, date of birth, profession and place of permanent registry of the head of such house;

3. The ground for the prohibition from the re-entering and the date when such ground has occurred.

151.—If a person who cannot re-enter his family registry because of his being prohibited or because the house in which he would have to re-enter has been abandoned or is extinct has established a house of his own, he must within ten days from the day when he had knowledge of such fact make a notification thereof, together with a statement of the following facts:—

1. The name, date of birth, profession and place of permanent registry of the head of the house who has prohibited his re-entering or of the last head of the house which has been abandoned or is extinct;

2. The ground for and the date of the prohibition or the abandonment or extinction of the house which he was to re-enter;

3. If there is a person who is to enter the house of the person making a notification, the name, date of birth, profession and place of permanent registry of such person.

SECTION XVII.

ABANDONMENT AND EXTINCTION OF A HOUSE.

152.—When a person wants to abandon his house, he must make a notification thereof together with the following facts and annex either a document showing that there is no person who by succession to the house has become head of the house or a copy of a decision of the Court relating to the permission to abandon the house, namely:—

1. The name, date of birth, profession and place of permanent registry of the head of the house which the person who has abandoned his house is to enter;

2. The name, date of birth and profession of any person who, following the person who has abandoned his house, enters another house.

153.—A member of an extinct house who has established a house of his own, must within ten days from the day when he had knowledge of such facts make a notification of the extinction of the house and of the establishment of a house of his own together with a statement of the following facts:—

1. The name, date of birth, profession and place of permanent registry of the last head of the extinct house;

2. The ground for and the date of the extinction of the house;

3. The name, date of birth and profession of any person who, following the person having established a house of his own, enters such house.

SECTION XVIII.

ESTABLISHMENT OF A BRANCH HOUSE AND RE-ESTABLISHMENT OF AN ABANDONED OR EXTINGUISHED HOUSE.

154.—A person who wants to establish a branch house must make a notification thereof together with a statement of the following facts:—

1. The name, date of birth, profession and place of permanent registry of the person who is to be head of the branch house;

2. The name, profession and place of permanent registry of the head of the principal house and the relation existing between him and the person who is to be head of the branch house;

3. If there are persons who are to become members of a branch house, their names, date of birth and profession;

4. The names, profession and place of permanent registry of the parents of those who are to become head or members of a branch house.

155.—A person who wants to re-establish an abandoned or extinct house must make a notification thereof together with a statement of the following facts:—

1. The name, profession and place of permanent registry of the last head of the abandoned or extinct house;

2. The ground for and the date of the abandonment or extinction;

3. The relation between the abandoned or extinct house and the house of the person who re-establishes it;

4. The name, date of birth, profession and place of permanent registry of the head of the house of the person who re-establishes a house;

5. The name, date of birth and profession of any person who, following the person who re-establishes a house, enters such house.

156.—In a notification of the establishment of a branch house or the re-establishment of an abandoned or extinct house the person who makes such notification must annex a document showing the consent of the head of the house or must cause the head of the house to state his consent on the notification and affix his signature and seal thereto.

The foregoing provisions apply correspondingly in case that according to the restrictive provision of Art. 743 of the Civil Code the consent of a person having parental power or of a guardian is required.

SECTION XIX.

ACQUISITION AND LOSS OF NATIONALITY.

157.—When an alien is to acquire the Japanese nationality by marriage or by adoption, the person who makes the notification of marriage or adoption, must state in the notification the original nationality of the person who is to acquire the Japanese nationality.

If an alien marries a woman who is head of a house or if he becomes "muko-yōshi" there must

in addition to the facts of the foregoing paragraph be annexed to the notification a certificate of permission by the Minister of the Interior.

158.—When an alien is to acquire the Japanese nationality by acknowledgment,* the person acknowledging must in the notification of acknowledgment mention the original nationality of the child.

If the mother of the child is an alien, the person acknowledging must in the notification state the nationality of the mother.

159.—A person who has become naturalized must within ten days after he has obtained permission make notification thereof together with a statement of the following facts, and annex a copy of the certificate of permission:—

1. The name, date of birth, profession, domicile and original nationality of the person naturalized;

2. The name, date of birth, profession and nationality of the parents;

3. If there are any persons who have acquired the Japanese nationality together with the person naturalized, their names, date of birth and profession and the relation existing between them and the person naturalized;

4. The date of the permission.

If the wife or children of the person naturalized do not acquire the Japanese nationality together with him, the reason must be mentioned in the notification.

160.—When a person is to lose his Japanese nationality he must before such loss takes place make a notification thereof together with a statement of the following facts:—

1. The ground for the loss of nationality;

2. If the time of the loss can be known, its date;

3. If there is a legal expectant heir to the house, his name, date of birth and profession and the relation existing between him and the person making a notification;

4. The new nationality to be acquired;

5. If the wife or the children of the person making a notification are to lose the Japanese nationality together with him, their names, date of birth and profession.

161.—If a person who has lost the Japanese nationality, cannot make a notification thereof before the loss takes place, he must make it within ten days after the loss. This provision does not apply if the person who has lost his nationality has no domicile or residence in Japan.

162.—If a person who is to lose the Japanese nationality is seventeen years old or more, the person making a notification must annex thereto a document showing that such person has already undergone his military service or that he is not bound to serve in the army or navy.

If a person who is to lose the Japanese nationality holds a Government office, the person making a notification must annex thereto a copy of the Certificate of Permission of the competent higher officer.

163.—A person who has recovered the Japanese nationality, must within ten days from the day when he obtained permission to recover it, make a notification thereof together with a statement of the following facts and must annex a copy of the Certificate of Permission of the Minister of the Interior:—

1. The ground for which and the date on which he has lost the Japanese nationality;

2. The nationality he had before the recovery of the Japanese nationality;

3. The date on which he has obtained the permission for recovery;

4. If there are any persons who either acquire or recover the Japanese nationality together with him, their names, date of birth and profession and the relation existing between such persons and the person who recovered the Japanese nationality.

SECTION XX.

CHANGE OF THE NAME AND THE CLASS.

164.—A person who has reassumed a family name or changed his surname must within ten days make a notification thereof together with a statement of the following facts, annexing a copy of the Certificate of Permission of the competent Government office, namely:—

1. The name he had before he reassumed a family name or changed a surname;

2. The family name he reassumed or the surname he changed;

3. The ground for such reassumption or change, and the date of permission.

165.—A person who has become ennobled or has lost the class of nobility or "shizoku" must within ten days make a notification thereof together with a statement of the following facts and must annex a copy of the Certificate of Granting or of the Certificate of Permission by the competent Government office, namely:—

1. The new and the old class;

2. The ground for the change of class;

3. The date of the certificate of granting or of the permission of the change.

* See Art. 827 ff. of the Civil Code.

If the person as to whose class a change has taken place, is a member of a house, the head of the house must make such notification.

166.—The provisions of the preceding article do not apply to a person who has lost his class in consequence of the establishment of a branch house or the re-establishment of an abandoned or extinct house or of a criminal punishment; but if a person has lost his class in consequence of a criminal punishment, the court must give notice thereof to the Registrar of the place of such person's permanent registry.

SECTION XXI.

ALTERATION OF STATUS REGISTRATIONS.

167.—When a person wants to apply for an alteration of a status registration he must apply for it on obtaining the permission of the Local Court having jurisdiction over the place where the Registry Office in which the original registration has been made is situated.

168.—An application for an alteration of a status registration must be made to the Registrar who made the original registration, within one month from the day when the decree granting permission has become finally binding, together with a statement of the following facts, and a copy of the decree must be presented:

1. The designation of the subject matter and of the date of the original registration;
2. The facts to be altered.

169.—The provisions of the preceding article apply correspondingly in case an alteration of a status registration is applied for on the ground of a finally binding judgment.

CHAPTER V.

FAMILY REGISTRY BOOKS.

170.—Family registries are prepared for persons whose permanent registry is fixed within the place of jurisdiction of a Registrar.

A person who has not the Japanese nationality cannot create a permanent registry.

171.—Family registries are bound as a book in the order of the numbers of land.

If within the place of the jurisdiction of a Registrar there are two or more districts having separate numbers of land, the order of such districts is determined by the Registrar.

172.—A Family Registry Book is kept in original and duplicate.

The original of a Family Registry Book is preserved in the Registry Office, the duplicate in the District Court having jurisdiction over the supervising Local Court.

173.—Family registries which in consequence of a succession to a house, the abandonment or extinction of a house or for any other reason have been entirely struck out are taken out of the Family Registry Book, bound together as a special book and preserved in the Registry Office.

The Minister of Justice fixes the period during which such books are to be preserved.

174.—The provisions of Arts. 12-15 apply correspondingly to Family Registry Books and to copies of and extracts from, family registries.

CHAPTER VI.

PROCEEDINGS RELATING TO ENTRIES IN FAMILY REGISTRIES.

175.—For each family one family registry is prepared.

176.—In a family registry the following facts must be entered:—

1. The names of the head of the house, of the former head of the house and of the members of the house;
2. The class of the head of the house and the place of his permanent registry; if, however, the class of the head and of the members of the house is different, the class of the members must also be mentioned;
3. The date of birth of the head of the house and of the members of the house;
4. The reason why and the date on which they have become head or members of the house, but such entry need not be made in regard to persons who have become members of the house by birth;
5. The name of the parents of the head of the house and of the members of the house and the relation existing between such parents and the head or the members of the house;
6. The relation existing between the head of the house and the former head of the house and the relation existing between the members head of the house, but in regard to a member who, entering from another house, becomes husband or wife of a member or is in relationship with the head of the house through another member, in addition to the relation between such person and the head of the house there must be mentioned the relation between such person and the other member;
7. In regard to a person who, entering a house from another house, has become head or member

of the house, the place of his original registry, the name and class of the head of his original registry and the relation existing between the head of the original registry and the person who has become head or member of the house;

8. If a person who, entering from another house, has become a member of the house is in relationship with another member only, the relation between such person and the other member;

9. Status alterations of the head and members of the house and their reason and date;

10. In regard to a guardian, his name, and domicile and the date when he has entered upon his duties and when they ceased.

177.—In entering in a Family Registry the names of the head and the members of a house, the following order must be followed:—

1. The head of a house;
2. The lineal ascendants of the head of the house;
3. The husband or wife of the head of the house;
4. The lineal descendants of the head of the house and their husbands and wives;
5. The collateral relatives of the head of the house and their husbands and wives;
6. The persons who are not relatives of the head of the house.

As between lineal ascendants those of the farthest degree, as between lineal descendants or collateral relatives those of the nearest degree precede.

As between lineal ascendants, lineal descendants and collateral relatives of the same degree the order of relationship is followed, and if the order of relationship is the same, their order is determined by their age.

The provisions of the foregoing two paragraphs apply correspondingly to the entry of persons who are not relatives of the head of the house.

178.—When a Registrar has made a status registration or has received an application relating to a family registry, he must in making an entry in the family registry comply with the provisions of the following articles.

179.—When a registration of a succession to a house or of a recovery of a succession to a house has been made, a family registry of the new head of the house must be prepared on the basis of such registration and of the family registry of the former head of the house or of the person who had the title of head of the house.

In such case the registry of the former head of the house or of the person who had the title of head of a house is struck out, after the ground for so doing has been entered, and "kein" by the official seal must be made between this registry and the registry of the new head of the house.

If a child unborn is heir to a house, the procedure mentioned in the foregoing two paragraphs need not take place until his birth. In such case only the part of the former head's family registry relating to the head of the house must be struck out and the fact that the head of the house is unborn entered.

180.—When a registration of the establishment of a branch house, of the re-establishment of an abandoned or extinct house or else of a matter whereby a house is to be newly established has been made or a notification as to the transfer of a registry or of the obtaining of a registry by a head of a house being without a registry has been received, a family registry must be prepared based upon such registration or notification and a duplicate of the notification of transfer must be remitted to the former Registrar.

In preparing a family registry in accordance with the provisions of the foregoing paragraph, in addition to the facts mentioned in Art. 176 there must be entered the facts particular to each single case.

181.—When a registration of prohibition from re-entering a family registry has been made, the essential points of such registration must be entered in the family registry of the person prohibiting.

182.—When a registration of an abandoned or extinct house has been made, the ground must be entered in the family registry of the last head of the house and the registry be struck out.

183.—When a registration of the death or disappearance of a head of a house standing alone has been made, if it is known that there is no heir to such house the Registrar must on obtaining the permission of the Local Court having jurisdiction over the place where the Registry Office is situated enter the ground and date of the extinction of the house in the family registry of the person who died or disappeared and must strike out such registry.

184.—If a notification of a change in a permanent registry within the place of jurisdiction of a Registrar has been received, the latter must state the ground in the family registry, strike out the entry relating to the former place of permanent registry and enter the new place of permanent registry.

185.—When in other cases than those mentioned in the preceding six articles a status registration has been made or a notification relating to a family registry has been received, the facts mentioned in

Art. 176 must be entered in the family registry on the basis of such registration or notification.

If in such case a change in a registry is made in accordance with the provisions of Art. 180, a such change must be entered.

186.—If after a family registry has been prepared one or more persons are to enter such registry, they are inserted at the end of the registry without regard to the order as specified in Art. 177.

187.—When all persons belonging to a house or one or more persons of a house are to be removed from a family registry, the ground for such removal is to be entered in the registry and the latter wholly or partly struck out.

188.—When the procedure of entering a family registry takes place, if the permanent registry of a person who is to enter a family registry is transferred to the jurisdiction of a Registrar from the jurisdiction of another Registrar, at the same time with the forwarding of the notification and other papers relating to status or of a notification relating to a family registry, a communication of such transfer must be made to the former Registrar.

189.—When a procedure of removal from a family registry is to take place, if the permanent registry of the person to be removed is transferred from the jurisdiction of a Registrar to the jurisdiction of another Registrar, the Registrar must after he has received a communication from the new Registrar as to the entering a register insert in the family registry the date of the forwarding and of the receipt of such communication and must proceed with the removal.

If a removal because of the transfer of a permanent registry, is to take place there must in addition to the facts specified in the foregoing paragraph be inserted the place where the registry has been transferred and the date of such transfer.

190.—If an insertion in a family registry is effected on the basis of a notification relating to a status registration or to family registry, there must in addition to the facts provided for in the preceding articles be inserted the date of the reception of the notification and other papers relating to status or of the notification relating to family registry.

191.—The provisions of Arts. 18, 29 and 31 apply correspondingly to insertions in family registries.

192.—If one part of the paper used for family registries has been used up, another paper may be appended and used as paper for registries. In such case the Registrar must with his official seal make "kein" between the appended paper and the original paper.

193.—If there is a change as to administrative districts or to the denomination or number of land, the districts, denominations and numbers, as specified in the registries are considered to have been amended by operation of law.

194.—When a family registry has been prepared according to the provisions of Arts. 179 and 180, the Registrar must without delay forward a duplicate thereof to the District Court having jurisdiction over the supervising Local Court.

CHAPTER VII.

NOTIFICATIONS RELATING TO FAMILY REGISTRIES.

195.—If a permanent registry is to be transferred to a place outside of the jurisdiction of a Registrar, the head of the house must make a notification thereof to the Registrar of the place where the registry is to be transferred together with a statement of the following facts, and a copy of the registry must be annexed, namely:—

1. The name, date of birth and profession of the persons whose registry is to be transferred;
2. The place of the original registry and of the place where the registry has been transferred.

196.—If a place of permanent registry is to be changed within the place of jurisdiction of a Registrar, the head of the house must make a notification thereof to the Registrar together with a statement of the original place of registry and of the new place of registry.

197.—When a person who because of a deficiency of a notification or for other reasons has no permanent registry or has an additional permanent registry wants to make a notification of the obtaining of a family registry or of his removal from a family registry, he may do so with the permission of the Local Court having jurisdiction over the place where the Registry Office is situated.

198.—Notifications of the obtaining of a permanent registry must be made to the Registrar of the place where such registry is to be obtained within ten days from the day when the decree of permission has become finally binding, together with a statement of the following facts, and a copy of the decree of the court must be annexed, namely:—

1. The name, class, date of birth, and profession of the person who is to obtain a registry and the place of such registry;
2. The name of the parents of the person who is to obtain a registry and the relation existing between him and them;
3. The reason why he had no permanent registry.

4. If a person who is to obtain a permanent registry formerly had a permanent registry, the place of such former registry;

5. If a person who is to obtain a permanent registry is a head of a house such fact;

6. If a person who is to obtain a permanent registry is a member of a house, the name, class, profession of the head of such house and the relation existing between such person and the head of the house;

7. If persons who are to obtain a permanent registry are head and members of a house, a statement distinguishing between head and members and the relation existing between members and head of the house.

8. If a person who is to obtain a family registry has become head or member of the house, entering from another house, the place of his original registry, the name and class of the head of the original registry and the relation existing between such head and the person who is to obtain a family registry.

If in the cases mentioned under Nos. 6 and 7 a member of a house who is to obtain a permanent registry is a person who, entering from another house, has become husband or wife of another member or is in relationship with the head of the house through another member of the house, there must in addition to the relation existing between such person and the head of the house be inserted his relation with the other member of the house; but if such person is a relative of the other member only, only the relation between him and the other member must be inserted.

199.—A notification of removal from a registry must be made within ten days from the day when the decree of permission has become finally binding, to the Registrar of the place where such removal is to take place together with a statement of the following facts, and a copy of the decree must be annexed:—

1. The name, class, profession, place of permanent registry and of additional permanent registries of the person who is to be removed from a registry;

2. The reason why such person had additional permanent registries;

3. If the status of the person to be removed from a registry is different in the permanent registry and in an additional permanent registry the status as mentioned in the permanent registry and in an additional registry, and the reason why they are different.

200.—If persons who are to obtain a permanent registry or to be removed from a permanent registry are members of a house or members and head of a house, the head of the house must make a notification as specified in the preceding two articles.

201.—The provisions of Arts. 198 and 199 apply correspondingly when a notification of the obtaining of a permanent registry or of a removal from a permanent registry is made on the ground of a finally binding judgment.

202.—The provisions of Arts 43, 44, 46, 49—52, 54, 55, 58 and 62-66 apply correspondingly to notifications provided for in this Chapter.

CHAPTER VIII.

COMPLAINT.

203.—A person who is dissatisfied with a decree of a Registrar in regard to a matter relating to status registrations or family registries may make a complaint to the Local Court having jurisdiction over the place where the Registry Office is situated.

204.—The complaint is made by presenting a document of complaint to the competent Local Court.

To a document of complaint must be annexed the notification or application and all other papers relating to the case.

205.—The court which has received a complaint forwards all papers relating to the complaint to the Registrar and requests him to state his opinion on the complaint.

206.—If the Registrar believes a complaint to be well founded, he alters his decree and gives notice thereof to the Court and to the complainant. If the Registrar considers a complaint to be unfounded, he returns to the Court within five days all papers forwarded to him with a statement of his own opinion.

207.—If the Court finds that there is no reason for a complaint, the complaint is rejected and if the Court finds that there is a reason for a complaint, it directs the Registrar to make the necessary dispositions.

The foregoing decisions are made by an order of the Court.

208.—Against an order of the Court a complaint according to the provisions of the Code of Civil Procedure can be made only on the ground that such order is contrary to law.

209.—The provisions of the "Law concerning the procedure in non-contentious matters" apply correspondingly to the costs of a complaint.

CHAPTER IX.

PENALTIES.

210.—A person who omits to make a notification or application within the period provided for in this law is liable to a fine up to ten yen.

211.—If because a notification or application has not been made within the period provided for by law a Registrar gives notice to a person to make such notification or application within a period fixed by him and such person again omits to make a notification or application, he is liable to a fine up to twenty yen, and the same applies to a person who twice or oftener does not comply with a Registrar's notice.

212.—In the following cases a Registrar is liable to a fine up to thirty yen:

1. If he without proper reason does not receive a notification or application relating to status or family registry.

2. If he omits to make a status registration or an entry in a family registry.

213.—In the following cases a Registrar is liable to a fine up to ten yen:

1. If he without proper reason refuses to allow inspection of a Status Registration Book or a Family Registry Book.

2. If he without proper reason does not deliver copies of or extracts from, status registration or family registries or does not deliver a document showing the reception of a notification or application relating to status or family registry.

214.—Decisions relating to penalties provided for in this Chapter are made by the Local Court having jurisdiction over the place where the person to be punished has his domicile or residence.

The provisions of the law concerning procedure in non-contentious matters apply correspondingly to such decisions and their execution.

215.—A person who in order to obtain an advantage for himself or another person or in order to prejudice another person makes a false notification or application in regard to status or family registries is liable to major imprisonment of from eleven days to four years or to a penalty of from two yen to one hundred yen.

ADDITIONAL PROVISIONS.

216.—When there is no chief official of a city, town or village the official exercising the functions of such official acts as Registrar and the office of such official is the Registry Office.

In a place where there is no person who could act as proxy in regard to the functions of an official exercising the functions of a Chief of a city, town or village, the President of the District Court having jurisdiction over the supervising Local Court with the permission of the Minister of Justice appoints provisionally a person to act as proxy in regard to such functions.

If in a place there are no members of a City Council or other officials who might exercise the functions of a Registrar, the persons who are to exercise such functions instead of them are likewise determined by the procedure specified in the foregoing paragraph.

217.—Fees paid according to the provisions of this law are an income of the city, town or village, but in a place where the Public Treasury pays the expenses of the Registrar Office, such fees accrue to the Treasury.

The amount of fees will be determined by Regulation.

218.—When according to the provisions of this law a person making a notification or any other person must sign his name and affix his stamp, if such person has no stamp his signature is sufficient; if he cannot sign his name, it is sufficient if his name is signed by another person and his stamp affixed; if he cannot sign his name and has no stamp, it is sufficient if his name is signed by another person and he himself makes an impression by his thumb. If according to the foregoing provisions a stamp is not affixed or a signature is made by a proxy or an impression is made by the thumb, such fact must be mentioned in the document.

219.—Until 31st December, 1898, the books hitherto prepared as registration lists may be used instead of Status Registration Books.

220.—If the number of volumes or the number of leaves of a registration list is not sufficient for the use of such list in place of a status registration book, the Registrar may—but only until 31st December, 1898, irrespective of the provisions of Art. 9 prepare a Status Registration Book in the same way in which a registration list is prepared. The provisions of the foregoing paragraph apply correspondingly to a status registration book of a place where there is no registration list.

221.—The period within which family registries are to be prepared according to the provisions of this law shall either for each single place or generally be determined by the Minister of Justice.

If after this law has taken effect an entry in a family registry is made or a new family registry is prepared, the provisions of this law must be complied with in regard to such entries or preparation of registries, but if facts to be registered are not known or if in paper previously used for family registries a section

in which such facts may be entered is not arranged, their entry may be dispensed with.

222.—The law on family registries published on the 4th April of the 4th year of Meiji, the Regulations No. 19 of the Department of the Interior and the Regulations No. 22 of the same Department and of the same year with the exception of the provisions relating to residence outside of the place of permanent registry are repealed from the day when this law takes effect, and any other laws or regulations contradictory to the provisions of or coinciding with this law are repealed from the same date.

As to the supervision of the affairs relating to residence out of the place of permanent registry the provisions of Art. 5 apply correspondingly.

223.—The day when this law is to take effect shall be determined by Imperial Ordinance.

EXTRACT FROM IMPERIAL ORDINANCE NO. 23.

The law concerning Family Registries takes effect from the 16th July, 1898.

RULES OF THE DEPARTMENT OF JUSTICE, NO. 30, OF JULY, 1897.

The amount of fees to be paid according to the provisions of the Law concerning Family Registries is determined as follows:—

1.—A person who applies for the inspection of a Status Registration Book must pay 10 sen;

2.—A person who applies for a copy of or an extract from, a Status Registration Book or a Family Registry must pay 10 sen for each leaf. A leaf not entirely filled up is considered as a full leaf. The number of leaves is computed according to the original;

3.—A person who applies for a receipt for a notification or application relating to status or family registries must pay 5 sen for each matter;

4.—If a fee falls to the Public Treasury, the application as specified in the last three articles must be made in writing. In such case a fee is paid by affixing revenue stamps to the application.

RAILWAY AND STEAMER LITERATURE.

We receive with the compliments of Mr. T. D. McKay a bulky parcel of literature setting forth the merits of the various steamer and railway lines which that gentleman represents. Some of these publications we have already seen, but many of them are new and interesting even to the non-travelling reader, to whom doubtless these things are addressed with the object of inducing him to travel. This class of advertising matter seems to be attaining higher quality all the time, and anything more artistic than, say, the Del Monté folders it would be difficult to conceive. From the same source we have to acknowledge receipt of a capital map, showing the North Western Route and its connections.

THE PLAGUE.

A fresh case of plague was reported on July 23rd at Nakamura-machi, Yokohama. The victim is a boy three years old, grandson of a coolie named T. Fukuda. He was at once removed to the Manji Hospital. The dwelling of the patient as well as neighbouring houses was isolated.

The condition of the old man, Y. Sudzuki, who is under medical treatment at the Manji hospital is improving.

A telegram from Taipeh, Formosa, states that five cases of plague appeared there on July 21st. Two of the patients died. Another case was on the same day reported on board a Chinese junk which arrived at Keelung from Amoy. The patient died in a short time.

ATHLETIC EXHIBITION.

At the request of Messrs. J. Goodland and D. I. Breese, British tourists, Mr. Ikariyama, Superintendent of the Kagacho Police, gave on July 24th an exhibition of *Gekken* and *Jujitsu*—the feats being performed by members of the police force in the premises of the station. During the performance, the superintendent and the police interpreter gave explanations on points which the foreign spectators could not understand. The show lasted for about an hour ending at 10.30 a.m. The foreign gentlemen left by the steamer *Empress of Japan* for Vancouver.

EUROPE, THE KINGDOM OF RIUKIU,
AND JAPAN.(FROM THE "JOURNAL DES DÉBATS," MAY
23RD, 1903.)

[TRANSLATED FOR THE "JAPAN MAIL"]

The opium war and the Treaty of Nankin which terminated it (August 29, 1842) attracted anew the attention of France to the Far East—an attention that had been averted since the re-establishment of the Canton Consulate (1829). Subsequent to the commencement of hostilities between England and China, several warships were sent to these latitudes; they were afterwards organised into a naval squadron and the command was taken in 1843 by Admiral Cécille. Acting according to instructions this general officer sent a sloop-of-war on a mission to the islands of Sulu and another to the Riukiu islands; and later he himself went to the Riukiu islands, then to Nagasaki, to Korea and to Tourane; he concerned himself with the study, on the spot, of the political conditions of those regions to which the Anglo-Chinese war gave a new importance. On the flank of China, whose five ports were hardly opened, a little distance from Japan, which was still closed, with the exception of the half-opened port of Deshima (in Nagasaki), England had had ceded to her the islet of Hong-kong; should not France seek for a similar position? Attention was attracted in the first place by Basilan, one of the Sulu islands, and also by the southern Riukiu islands.

The Riukiu islands, the largest of which is 90 kilometres long, form a chain from the south of Kiushiu, to the north of Formosa, and describe a curve like that of a cord freely hung between two points: which perhaps accounts for one of their Japanese names, Okinawa—the high sea cable. Inhabited by a people of gentle manners, cultivated and fertile, situated at an equal distance from the Chinese and Japanese coasts, and also from the northern Philippines, these islands would have made a convenient naval station: at the same time, typhoons are frequent; and moreover, at the time of which we write the natural resources of the islands were almost entirely ignored, and their position was rather out of the way for sailing ships.

At the end of 1843, Admiral Cécille, kept in China by the Lagrenée mission, sent the sloop of war *Alcmène* to reconnoitre Riukiu. He asked the Procurator of Foreign Missions in Macao for a missionary who would consent to be sent to these islands to learn the language; he counted on this missionary serving him afterwards as interpreter, when the naval squadron should go to Japan. Mr. Forcade, who had arrived at Macao some months previously, was chosen for this post of advance guard; he accepted it gladly hoping in course of time to penetrate into Japan and to implant there anew the Christian religion, which had thriven so well at the commencement of the seventeenth and at the end of the eighteenth century. "We receive you well," said the mandarins to the commander of the sloop of war, "we will give you what you need. As to commerce, our country is small and poor, there is nothing to give in exchange for your precious objects." When the officers landed, mandarins surrounded them to do them honour, hindered them from approaching the town, and scattered, by means of blows from bamboos, the populace which seemed curious and prepossessing.

On the 28th April, 1844, Mr. Forcade disembarked near Nafa, only a short distance from the capital of the kingdom, and, the sloop of war leaving again on the 6th May, he stayed on land in the company of a Chinese catechist; he had been presented as official interpreter of the French Government by the commander. From that time until the 27th August, 1848, one or two priests of the Foreign Missions resided in this capacity on the island, at the monastery of Amilkou, which had been assigned to them as their dwelling place. "We found there," wrote Mr. Forcade, "a

very pretty circle of mandarins installed near us with the sole object—so we were told—of entertaining us in our leisure hours.

"Night and day, we could not use our handkerchiefs, cough or expectorate, without being besieged by a dozen individuals, who, with a frightened air, asked us whether we were fainting. The table was in keeping with the rest of the establishment: the country was supposed to exhaust its products in order to support us." But it was impossible to take a step outside the monastery without an escort that dispersed all the passers-by; it was forbidden to teach the stranger the language of the country, all communication taking place in Chinese.

"For a long time he was not even told the names of the simplest things, or if he was told, he was deceived as to the sense of words." One day, during a walk, he succeeds in wandering away from his escort and meets some peasants who hasten to surround him; they offer him a pipe, tobacco and a light; but the escort appears, and the good people disperse. The policy of the Government was to represent the country as unhealthy, the soil as unproductive, the inhabitants as timid and uncivilised, to treat as prisoners of mark the missionaries, and, at the times of their visits, the naval officers; to keep off, in this way, all relations with strangers. This policy they never gave way in.

In the month of June, 1846, Admiral Cécille went to Ouinting (Fort Melville) in the north of Nafa, and tried to negotiate a commercial treaty; the mandarins did not consent to it. It was however agreed in writing that the missionaries should be free during their outings, that teachers of the language and books should be procured for them, that they should hire their servants and be enabled to send for their provisions to the public market. The convention was carried out less than it was changed; two years later, owing to a chimerical fear of complications with China, the *Bayonnaise*, commanded by Jurien de la Gravière, received orders to come and seek the French missionary; Mr. Forcade, barely supported when backed up by France, could not remain when this protection was withdrawn from him; he departed therefore, convinced that nothing would be done in Riukiu, either for the Christian religion or for commerce, so long as Japan ruled there.

The suzerainty of China over this little kingdom confined itself in reality to an exchange of embassies and to the investiture given to the King by the Pekin Government. Japan's sway was quite different. In 1609, the Lord of Satsuma had invaded the islands, set fire to the capital, Choui, and carried the King away into captivity; this prince was released two years later, the conditions being the cession of the northern islands, a promise of tribute and recognition of the suzerainty of Satsuma; the lords of this principality attended to the execution of all these conditions; they drew large revenues from their new domains, and carried on a lucrative trade at Nafa, not only with the people of the country but also with the Chinese: they thus evaded the prohibition of foreign commerce promulgated in Japan by the Shogun in 1636. The archipelago had submitted sufficiently to Japan for the latter to introduce her laws against strange religions and even the custom of *e-houini* (trampling the cross underfoot). The opium war and the European cruisers in Riukiu redoubled the attention of the Satsuma Government; it placed in Choui, near the King, a resident charged to maintain the policy of the kingdom in conformity with that of Japan. The resident was supported by a Japanese guard. "The Yamato have forbidden speech with strangers, on pain of death" was said now and then secretly, to the missionaries.

However, English vessels appeared on several occasions. Admiral Cochrane came to Nafa and exchanged civilities with the Government. On the 30th April, 1846, an English schooner landed a missionary, Dr. Bettelheim, who at first let himself pass as a physician and who spent several years there. At the end of March, 1849, a sloop of war of the United States went to Riukiu. A rumour was current in Hong-kong that there was a question of choosing a coaling station. On the 26th May, 1853, Com-

modore Perry anchored at Nafa; he collected, during a stay of several weeks, valuable materials for hydrography and geography, but did not gain a treaty.

It was then that he turned towards the north and cast anchor before Uraga (8th July). The opening up of Japan was to be the result of his negotiations. But whilst awaiting their issue, he caused storehouses for coal to be built at Nafa, in spite of the protestations of the mandarins; he continued to explore the islands, and prepared to seize one of them in the event of failure in Yedo. For several years the situation in Japan remained undecided, notwithstanding the signing of the first treaty with the United States (31st March, 1854). It was at that time that a treaty was negotiated for France, at Nafa, by Admiral Guérin (at the end of 1855). In 1859, a Dutch vessel, the *Bali*, came for the purpose of discussing a convention. Japan then very slowly opened up; in Kiukiu the distrust remained unchanged; the French missionaries who returned at the beginning of 1855 to their monastery of Amilkou, were treated with more consideration, but the population, by order, always gave the strangers a wide berth.

By reason of the opening up of Japan, the Riukiu islands lost all political interest, the Occidental Powers no longer sought to acquire them for naval bases in the Pacific. The treaties negotiated at Nafa were not even ratified, and the kingdom of Okinawa returned to its obscurity. But restored Japan did not forget the designs formed for some time by Europe and America. Moreover it happened (January, 1872) that Loochooan sailors, driven there by a storm, were massacred by the savage aborigines of Formosa. The incident made felt the inconvenience of the ambiguous situation regarding China. An imperial decree of the 16th October, 1872, "raised the King of Riukiu to the rank of a Japanese noble"; soon afterwards the Government offered him a residence in Tokyo and made a gift to the kingdom of 30,000 yen in order to establish monetary circulation. On the 30 October, the Japanese Minister of State for Foreign Affairs declared that in future he would conduct the foreign relations of the archipelago. In July, 1874, the whole of the administration was transferred to the Minister for Home Affairs in Tokyo; a Japanese garrison was installed in Choui in May, 1875; at last (April 4, 1879) the kingdom was converted into the prefecture of Okinawa. The King has lived in Tokyo since 1873 and has a seat in the House of Peers. Thus came to an end, by means of a Tokyo edict, a little kingdom that had remained independent since the commencement of history, and that laid claim to a miraculous origin.

China, sounded by Minister Soejima (spring, 1873), had at first declared that, as suzerain, it was incumbent on her to protect the Loochooans; but, when Japan acted, she remained unmoved. By this annexation, Japan simplified the question of Formosa, acquired new reasons for interfering in this island, of which she profited from 1874; she almost doubled her frontage on the Pacific, prepared for the acquisition of Formosa, which was realised in 1895, and kept away from her ports the eventual proximity of intriguing Occidentals. This first success enabled a Prime Minister, Okubo Toshimichi, to regulate in a satisfactory manner the more serious affairs of Formosa and Korea.

PATENT APPEAL.

At the Patent Bureau of the Department of Agriculture and Commerce a decision was given on July 9th in the matter of an appeal filed by Mr. M. Fiddler, Moscow, Russia, against the rejection of his application. He applied to the Bureau for registration of a patent for a safely explosive, but it was rejected, on November 24th, 1902, on the ground that the article is similar in the nature of its manufacture, to a British product registered in that country in 1901 under the registry number 8,101. The Russian manufacturer appealed contending that the two products are different in nature. The appeal was not sustained.
